

## CONTENTS

CONTRIBUTORS . . . . .	xv
FOREWORD . . . . .	xvii
PREFACE	xix

### 1. Photomultipliers: Their Cause and Cure

by ANDREW T. YOUNG

1.1. Introduction . . . . .	1
1.2. An Idealized Photomultiplier . . . . .	3
1.3. Basic Physics of Photomultipliers . . . . .	3
1.3.1. Photoemission . . . . .	3
1.3.2. Secondary Emission . . . . .	14
1.4. Real Photomultipliers . . . . .	16
1.4.1. Materials and Construction . . . . .	16
1.4.2. Undesirable Properties of Photomultipliers . .	37
1.5. Photomultipliers and System Components . . . . .	65
1.5.1. Pulse-Height Distributions . . . . .	66
1.5.2. Detection: the Signal/Noise Ratio . . . . .	74

### 2. Other Components in Photometric Systems

by ANDREW T. YOUNG

2.1. Optical Systems . . . . .	95
2.1.1. The Telescope and Atmosphere . . . . .	95
2.1.2. Filters and Spectrographs . . . . .	105
2.2. Calibration Problems and Standard Sources . . . . .	112
2.2.1. Light Sources . . . . .	112
2.2.2. Electronic Systems . . . . .	117
2.3. Principles of Photometer Design . . . . .	121

**3. Observational Technique and Data Reduction**

by ANDREW T. YOUNG

3.1. Atmospheric Extinction . . . . .	123
3.1.1. Introduction . . . . .	123
3.1.2. Basic Error Analyses . . . . .	124
3.1.3. Random Errors in Photometry . . . . .	130
3.1.4. Systematic Errors in Photometry . . . . .	137
3.1.5. Errors in Reduction Methods . . . . .	145
3.1.6. Actual Error Laws . . . . .	163
3.1.7. How Much Time to Spend on Extinction . .	169
3.1.8. Concluding Remarks on Extinction . . . . .	179
3.2. Transformation to a Standard System . . . . .	180
3.2.1. Introduction . . . . .	180
3.2.2. Transformations for Blackbodies . . . . .	181
3.2.3. Transformations in General . . . . .	184
3.2.4. Matching Response Functions . . . . .	189
3.2.5. Mathematical Models . . . . .	190

**4. Reshaping and Stabilization of Astronomical Images**

by DONALD M. HUNTER

4.1. Reshaping of Images . . . . .	193
4.1.1. Definitions . . . . .	193
4.1.2. Throughputs of Spectroscopes . . . . .	194
4.1.3. Image Slicers . . . . .	196
4.1.4. Bowen Image Slicer . . . . .	197
4.1.5. Installation . . . . .	201
4.1.6. Richardson Image Slicer . . . . .	201
4.1.7. Image Transformer . . . . .	204
4.1.8. Telescope Slicer of Fastie . . . . .	205
4.1.9. Fiber Optics . . . . .	205
4.1.10. Summary . . . . .	205
4.2. Stabilization of Images . . . . .	206
4.2.1. Automatic Guiding . . . . .	206
4.2.2. Dynamics of a Servo Mirror . . . . .	209
4.2.3. Other Drivers . . . . .	212
4.2.4. Image Trackers . . . . .	213
4.2.5. Tracking Devices . . . . .	214
4.2.6. Pulse-Counting Image Dissector . . . . .	219

**5. Detective Performance of Photographic Plates**

by D. W. LATHAM

5.1. Introduction . . . . .	221
5.2. Photographic Photometry . . . . .	222
5.3. Signal-to-Noise and Detective Quantum Efficiency . .	223
5.4. Detective Performance of Kodak Spectroscopic Plates, Types IIa-O, 103a-O, and IIIa-J	226
5.4.1. Accuracy and Precision of the Detective Per- formance Determinations . . . . .	226
5.4.2. Detective Performance of IIa-O and 103a-O Plates for Different Developers and Developing Times	228
5.4.3. Detective Performance of IIIa-J and IIa-O . .	233

**6. Two-Dimensional Electronic Recording**

6.1. Phosphor Output Image Tubes . . . . .	237
--	-----

by E. J. WAMPLER

6.1.1. Introduction . . . . .	237
6.1.2. Principles of Operation . . . . .	238
6.1.3. Astronomical Applications . . . . .	241
6.1.4. Future Developments . . . . .	250

6.2. Electrographic Tubes . . . . .	252
-------------------------------------	-----

by GERALD E. KRON

6.2.1. Introduction . . . . .	252
6.2.2. Electronic Focusing . . . . .	253
6.2.3. Magnetic Shielding . . . . .	256
6.2.4. The Lallemand Electronic Camera . . . . .	256
6.2.5. The US Navy Electronic Camera . . . . .	261
6.2.6. The McGee Spectracon . . . . .	265
6.2.7. Other Developments . . . . .	268
6.2.8. Emulsions and Development . . . . .	269
6.2.9. Characteristics of the Electronic Camera . .	272

6.3. Television Systems for Astronomical Applications . . . . .	277
by JOHN L. LOWRANCE and PAUL ZUCCHINO	
6.3.1. Introduction . . . . .	277
6.3.2. Review of TV Sensor Types . . . . .	278
6.3.3. System Design Considerations . . . . .	285
6.3.4. Integrating TV System Operation . . . . .	303
6.3.5. Television Data Processing . . . . .	307
6.3.6. Observational Results with Integrating Television	
	309
7. X-Ray and Gamma-Ray Detection by Means of Atmospheric Interactions: Fluorescence and Čerenkov Radiation	
by G. G. FAZIO	
7.1. Introduction . . . . .	315
7.2. Detection of Cosmic X Rays by Atmospheric Fluorescence . . . . .	318
7.2.1. The Fluorescence Process . . . . .	318
7.2.2. X-Ray-Induced Fluorescence Light in the Atmosphere	
	321
7.2.3. Ground-Based Detection of Fluorescence Light	324
7.2.4. Sensitivity for Detection of Cosmic X-Ray Sources	
	329
7.2.5. A Search for X-Ray Pulses from Supernovae	333
7.2.6. A Search for X-Ray Pulses Associated with Gravitational Radiation Pulses . . . . .	337
7.2.7. Background Sources of Light . . . . .	338
7.2.8. Conclusions and Future Experiments . . . . .	342
7.3. Detection of Cosmic Gamma Rays by Atmospheric Čerenkov Radiation	
7.3.1. Čerenkov Radiation in the Atmosphere	343
7.3.2. Properties of Čerenkov Radiation Generated by Cosmic-Ray Air Showers . . . . .	346
7.3.3. Detection Techniques for Cosmic Gamma Rays	
	350
7.3.4. Results and Future Experiments . . . . .	358

## 8. Polarization Techniques

by K. SERKOWSKI

8.1. Introduction . . . . .	361
8.1.1. Physical Mechanisms Producing Polarization of Light of Astronomical Objects . . . . .	361
8.1.2. Stokes Parameters . . . . .	362
8.2. Analyzers for Linearly Polarized Light . . . . .	363
8.2.1. Basic Properties of Analyzers . . . . .	363
8.2.2. Wire Grid Analyzers and Dipole Antennas .	364
8.2.3. Polarizing Beam Splitters . . . . .	366
8.3. Retarders . . . . .	371
8.3.1. Properties of Retarders . . . . .	371
8.3.2. Achromatic Retarders . . . . .	373
8.3.3. Variable Retarders . . . . .	378
8.4. Depolarizers . . . . .	379
8.4.1. The Lyot Depolarizer . . . . .	380
8.4.2. Optimum Orientation of the Lyot Depolarizer	381
8.4.3. Corrections for Depolarizer Inefficiency	382
8.4.4. Plane-Parallelism of Depolarizer or Retarder	383
8.5. Optimum Design of an Astronomical Polarimeter . .	384
8.5.1. Factors Limiting the Accuracy of Polarimetry	384
8.5.2. Polarimeter with Wollaston Prism Rotating Rel- ative to Photomultipliers . . . . .	388
8.5.3. Polarimeter with Rotating Half-Wave Plate .	389
8.5.4. Eliminating the Polarization of Sky Background	393
8.5.5. Measurements of Circular Polarization . . .	395
8.5.6. Polarimetric Method of Measuring Effective Wavelengths and Radial Velocities . . . . .	399
8.5.7. Birefringent Interferometers . . . . .	401
8.6. Instrumental Corrections . . . . .	406
8.6.1. Instrumental Polarization . . . . .	406
8.6.2. Zero Point of Position Angles . . . . .	411
8.7. Astronomical Polarimetry in the Future: Television and Image Tube Techniques . . . . .	412

**9. The Instrumentation and Techniques of Infrared Photometry**

by F. J. LOW and G. H. RIEKE

9.1. Introduction . . . . .	415
9.2. Detectors . . . . .	417
9.2.1. Thermal Detectors . . . . .	419
9.2.2. Photodetectors . . . . .	424
9.2.3. Comparison of Available Detectors . . . . .	424
9.2.4. Future Developments . . . . .	425
9.3. Associated Apparatus . . . . .	426
9.3.1. Infrared Filters . . . . .	426
9.3.2. Windows, Beam Splitters, and Polarizers . .	428
9.3.3. Cryogenics . . . . .	429
9.3.4. Electronics . . . . .	432
9.4. Telescope Design . . . . .	434
9.5. Modulation and Space Filtering Techniques . . .	444
9.6. Atmospheric Limitations . . . . .	447
9.7. The Infrared Photometric System . . . . .	451
9.7.1. Infrared Photometric Bands . . . . .	452
9.7.2. Absolute Calibration . . . . .	456
9.8. Observing Procedure . . . . .	460

**10. Diffraction Grating Instruments**

by DANIEL J. SCHROEDER

10.1. General Spectrometer Considerations . . . . .	463
10.1.1. Definition of Terms . . . . .	463
10.1.2. Spectrometer Parameters . . . . .	464
10.2. Diffraction Gratings . . . . .	469
10.2.1. General Grating Properties . . . . .	469
10.2.2. Grating Types . . . . .	473
10.2.3. Echelles . . . . .	474
10.3. Grating Spectrometers . . . . .	475
10.3.1. Plane Gratings—Collimated Light . . . . .	476
10.3.2. Plane Gratings—Convergent Light . . . . .	481
10.4. Echelle Spectrometers . . . . .	482
10.4.1. Methods of Order Sorting . . . . .	483

10.4.2. Nature of Focal Surface . . . . .	485
10.4.3. Comparison of Echelle and Grating Instruments	487
10.4.4. Echelle Spectrometer Designs . . . . .	488
10.5. Concluding Comments . . . . .	489

## 11. Fourier Spectrometers

by HERBERT W. SCHNOPPER and RODGER I. THOMPSON

11.0. Introduction . . . . .	491
11.1. Historical Background . . . . .	492
11.1.1. Introduction . . . . .	492
11.1.2. Early History . . . . .	492
11.1.3. Fellgett Advantage . . . . .	493
11.1.4. Recent History . . . . .	494
11.2. Theory of Fourier Transform Spectroscopy . . . . .	495
11.2.1. The Michelson Interferometer . . . . .	495
11.2.2. Mathematics of Fourier Transform Spectroscopy	
. . . . .	498
11.2.3. Resolution and Apodization . . . . .	500
11.2.4. Sampling . . . . .	503
11.2.5. Off-Center Interferograms . . . . .	506
11.2.6. Phase Correction . . . . .	509
11.2.7. Noise . . . . .	511
11.3. Fourier Spectroscopy in Practice . . . . .	516
11.3.1. The Interferometer . . . . .	516
11.3.2. Data Systems . . . . .	519
11.3.3. Optics . . . . .	524
11.3.4. Limiting Magnitude . . . . .	527
Appendix A . . . . .	529

## 12. Fabry-Perot Instruments for Astronomy

by F. L. ROESLER

12.0. Introduction . . . . .	531
12.1. The Ideal Fabry-Perot Interferometer . . . . .	532

12.1.1. Basic Properties and Definitions . . . . .	532
12.1.2. The Monochromatic Ring System of the Fa- bry-Perot . . . . .	533
12.2. Application of the Fabry-Perot Interferometer as a Spectrometer . . . . .	534
12.2.1. Premonochromatization Requirement . . . . .	535
12.2.2. Isolation of a Spectral Element . . . . .	535
12.2.3. Luminosity and Luminosity-Resolution Pro- duct of Fabry-Perot Spectrometers . . . . .	536
12.2.4. Scanning Fabry-Perot Spectrometers . . . . .	537
12.2.5. Limitations Imposed by Surface Nonflatness .	539
12.2.6. Instrumental Finesse . . . . .	540
12.3. Multiple Fabry-Perot Spectrometers . . . . .	540
12.3.1. Method of Extending the Free Spectral Range	540
12.3.2. Method of Coupling Etalons in Series . . . . .	543
12.3.3. Comparison of Single- and Multiple-Etalon Properties . . . . .	544
12.3.4. Required Number of Etalons . . . . .	546
12.4. Observation of Astronomical Sources with Fabry-Pe- rot Spectrometers . . . . .	548
12.4.1. Relevant Characteristics of Astronomical Sour- ces	548
12.4.2. Geometrical Restrictions in Coupling Sources to Fabry-Perot Spectrometers . . . . .	549
12.4.3. Source Spectral Characteristics and Instru- mental Resolution . . . . .	551
12.5. Examples of Basic Fabry-Perot Spectrometer Design for Astronomical Observations . . . . .	553
12.5.1. A Single-Etalon Nebular Spectrometer . . . . .	553
12.5.2. A Large-Aperture, Double-Etalon Spectrometer	555
12.5.3. A High-Resolution Triple-Etalon Spectrometer for Continuous Sources-PEPSIOS . . . . .	556
12.6. Adjustment and Calibration of Fabry-Perot Spectro- meters	557
12.6.1. Adjustment of Single-Etalon Spectrometers . . . . .	557
12.6.2. Adjustment of Polyetalon Spectrometers . . . . .	559
12.6.3. Calibration of Fabry-Perot Spectrometers . . . . .	561

12.7. Comparison with Other Instruments . . . . .	564
12.7.1. Comparison of Fabry-Perot and Grating Spec-	
trometers . . . . .	564
12.7.2. Comparison of Fabry-Perot and Michelson	
Fourier Transform Spectrometers . . . . .	568
AUTHOR INDEX . . . . .	571
SUBJECT INDEX . . . . .	582
