CONTRIBUTORS TO VOLUME 12, PARTS A and B	xxi

4. Single-Antenna Observations

4.1. Observations of Small-Diameter Sources	1
by JOHN R. DICKEL	
4.1.1. Introduction	1
4.1.2. Solution of the Convolution Integral	2
4.1.3. Observational Techniques	7
4.1.4. Limits to the Accuracy of an Observation	12
4.2. Fundamentals of Spectral-Line Measurements	19
by D. R. W. WILLIAMS	
4.2.1. Brief Historical Survey of Early Spectral-Line Measurements	19
4.2.2. Special Equipment Requirements for Spectral-Line Work	20
4.2.3. The Frequencies of the Radio Lines	23
4.2.4. The Strengths of the Radio Lines	24
4.2.5. The Calculation of Expected Linewidths	29
4.2.6. The Use of Switching Techniques in Spectroscopy . .	31

4.2.7.	Intensity Standardization in 21-cm Spectral-Line Work	36
4.2.8.	Measurements with Multichannel Filter Receivers . .	37
4.3.	Measurements with Radio-Frequency Spectrometers	46
	by J. A. BALL	
4.3.1.	Introduction	46
4.3.2.	Switching Schemes and Baselines	48
4.3.3.	Baseline Fitting	51
4.3.4.	Noise Considerations	52
4.3.5.	The Spectral Resolutions in a Correlator System . . .	55
4.4.	Measurements of Galactic 21-cm Hydrogen	58
	by CARL HEILES AND G. T. WRIXON	
4.4.1.	Introduction	58
4.4.2.	Emission Surveys	58
4.4.3.	Baseline Determination in Emission Measurements . .	66
4.4.4.	Calibration of Scale	69
4.4.5.	Absorption Measurements	72
4.4.6.	Baseline Determination in Absorption Measurements .	74
4.4.7.	Zeeman Splitting and Polarization	76
4.5.	Pulsar Observing Techniques	78
	by G. RICHARD HUGUENIN	
4.5.1.	Pulsar Radio Emission	78
4.5.2.	Sensitivity and Time Resolution	83
4.5.3.	Dispersion Removal	84
4.5.4.	Period and Dispersion Determinations	87
4.5.5.	Polarization Observations	88
4.5.6.	Spectral Observations	89
4.5.7.	Interferometric Techniques	90
4.5.8.	Search Techniques	91
4.6.	Lunar Occultation Measurements	92
	by C. HAZARD	
4.6.1.	Lunar Occultations	92
4.6.2.	Method of Observation	92

4.6.3.	The Moon as a Straight Diffracting Edge	94
4.6.4.	Shape of the Occultation Curve of a Point Source . .	95
4.6.5.	Time Scale of the Occultation Curve of a Point Source	96
4.6.6.	The Occultation Curve of a Source of Finite Size . .	98
4.6.7.	Position Measurement	99
4.6.8.	Lobe Analysis and Model Fitting	100
4.6.9.	The Restoration Technique	101
4.6.10.	Effect of Finite Antenna Beam	104
4.6.11.	Effect of Finite Receiver Bandwidth	105
4.6.12.	Effect of Receiver and Antenna Noise	106
4.6.13.	Minimum Useful Bandwidth	109
4.6.14.	Choice of Operational Bandwidth	111
4.6.15.	Practical Restoration Procedure	111
4.6.16.	Occultation Surveys	114
4.6.17.	Refraction Effects	115
4.7.	Scintillation Measurements.	118
	by L. T. LITTLE	
4.7.1.	Introduction	118
4.7.2.	Diffraction Theory	119
4.7.3.	Interplanetary Scintillation and Radio Source Structure	126
4.7.4.	Interstellar Scintillation and the Bandwidth Effect . .	135
5.	Interferometers and Arrays	
5.1.	Theory of Two-Element Interferometers	139
	by A. E. E. ROGERS	
5.1.1.	Introduction	139
5.1.2.	Signal Analysis	141
5.1.3.	Two-Dimensional Fourier Transform Relation between Brightness and Visibility	148
5.1.4.	Polarization Measurements with Interferometers . . .	152
5.1.5.	Signal-to-Noise Ratio Analysis for Interferometers . .	153

5.2. Connected-Element Interferometry 158
by GUY POOLEY

5.2.1. Introduction 158

5.2.2. Astrometry 161

5.2.3. Mapping of Radio Sources 166

5.3. Very Long Baseline Interferometer Systems 174
by J. M. MORAN

5.3.1. Introduction 174

5.3.2. Basic Parts 174

5.3.3. Specific VLBI Systems 186

5.3.4. Comparison among Systems 197

5.4. Frequency and Time Standards 198
by ROBERT F. C. VESSOT

5.4.1. Introduction 198

5.4.2. Frequency-Domain and Time-Domain Measures of
Frequency Stability and Their Relationship 200

5.4.3. Spectral-Density Models 202

5.4.4. Phase and Time Prediction 207

5.4.5. Frequency and Time Standards 208

5.4.6. Quartz-Crystal-Controlled Oscillators 212

5.4.7. The Atomic Hydrogen Maser 214

5.4.8. The Cesium-Beam Resonator 219

5.4.9. The Rubidium-Gas-Cell Resonator 221

5.4.10. Frequency-Lock Servo Systems 223

5.4.11. The Present State of the Art 225

5.5. Very Long Baseline Interferometric Observations and Data
Reduction 228
by J. M. MORAN

5.5.1. Introduction 228

5.5.2. Measurement of Fringe Amplitude and Phase 229

5.5.3. Measurement of Fringe Amplitude in the Presence of
Phase Noise 238

5.5.4. Misidentification of Signal 247

5.5.5. Measurement of Source Brightness Distribution 248

5.5.6. Operational Considerations 256

5.6.	Estimation of Astrometric and Geodetic Parameters	261
	by IRWIN I. SHAPIRO	
5.6.1.	Introduction	261
5.6.2.	VLBI Observables	261
5.6.3.	Information Content of Observables	264
5.6.4.	Astrometric and Geodetic Parameters	466
6.	Computer Programs for Radio Astronomy	
6.1.	Radial-Velocity Corrections for Earth Motion	277
	by M. A. GORDON	
6.1.1.	Introduction	277
6.1.2.	Special Relativity	278
6.1.3.	Conventional Tabulation of Redshifts	279
6.1.4.	The Aberration of Light	280
6.1.5.	Velocity Reference Frames	280
6.1.6.	Calculation of Radial Velocities	282
6.2.	The Fast Fourier Transform	284
	by NORMAN BRENNER	
6.2.1.	Introduction	284
6.2.2.	Program Calling Sequences	294
6.2.3.	Programming Implementation	295
6.2.4.	Program Testing	295
6.3.	Data Presentation Techniques	296
6.3.1.	Contour Mapping	296
	by NORMAN BRENNER AND STANLEY H. ZISK	
6.3.2.	Rule-Surface Mapping	299
	by NORMAN BRENNER	
6.3.3.	Gray-Scale Mapping	303
	by NORMAN BRENNER	
	Appendixes A–K	309
	INDEX FOR VOLUME 12, PART C	335
	INDEX FOR VOLUME 12, PART B	341
