

## CONTENTS

CONTRIBUTORS .....	xvii
PUBLISHER'S FOREWORD .....	xix
FOREWORD .....	xxi
PREFACE	xxiii
LIST OF VOLUMES IN TREATISE .....	xxvii
1. Nuclear Magnetic Resonance	
by JOSEPH R. SCHUH AND SUNNEY I. CHAN	
1.1. Introduction .....	1
1.2. Phenomenon of Magnetic Resonance .....	2
1.2.1. Quantum Description .....	2
1.2.2. Classical Description.....	4
1.2.3. Detection of Magnetic Resonance .....	7
1.3. Spin Relaxation .....	12
1.3.1. Spin-Lattice Relaxation.....	13
1.3.2. Spin-Spin Relaxation .....	14
1.3.3. Correlation Time .....	14
1.3.4. Relaxation Mechanisms .....	16
1.3.5. Effects of Anisotropic and Restricted Motions	24
1.4. Experimental Methods .....	25
1.4.1. Pulse Techniques.....	25
1.4.2. Magic-Angle Spinning.....	30
1.4.3. Double Resonance.....	32
1.4.4. Two-Dimensional FT-NMR.....	39
1.5. Selected Studies on Biological Systems .....	41

1.5.1. Proteins: Probing the Active Site of an Enzyme .....	41
1.5.2. Nucleic Acids: The Dynamic Structure of tRNA .....	44
1.5.3. Membranes: The Restricted Motions of Lipid Chains .....	47
1.5.4. Intact Cells: Metabolism Studied <i>in Vivo</i> .....	49
2. Nitroxide Spin Labels	
by GILLIAN M. K. HUMPHRIES AND HARDEN M. McCONNELL	
2.1. Introduction .....	53
2.2. Spin-Label Theory: A Descriptive Treatment .....	54
2.2.1. Fundamentals Including the Resonance Condition .....	54
2.2.2. Effect of Orientation .....	59
2.2.3. Effect of Motion .....	62
2.2.4. Effect of the Electrostatic Environment .....	63
2.2.5. Effect of Distribution or Concentration of Spin Labels: Spin-Exchange Broadening .....	65
2.2.6. Effect of Distribution or Concentration of Spin Labels: Dipole–Dipole Interactions .....	65
2.3. Spin-Label Theory: A Mathematical Treatment .....	65
2.3.1. The Resonance Condition .....	65
2.3.2. Absorption Probabilities and Paramagnetic Relaxation .....	68
2.3.3. The Bloch Equations .....	72
2.3.4. Nuclear Hyperfine Structure .....	75
2.3.5. The Spectroscopic Splitting Factor $g$ .....	83
2.3.6. The Spin Hamiltonian .....	84
2.3.7. Effect of Orientation: Single-Crystal Spectra .....	85
2.3.8. Isotropic Distributions of Strongly Immobilized Labels: Powder Spectra .....	90
2.3.9. Effects of Isotropic Motion on Spectra .....	93
2.3.10. Line Shapes with Fast Anisotropic Motion and Partial Orientation—Frequency Amplitude Order Parameters .....	98
2.3.11. Effect of Electron–Electron Spin–Spin Interaction: Dipolar Interactions in	

Biradicals with Fixed Distances between Spins	102
2.3.12. Effect of Electron-Electron Spin-Spin Interactions: Spin-Spin Interaction Determined by Translational Motion and Resulting from Colliding Spins .....	104
2.3.13. Enhancement of Nuclear Relaxation by Spin Labels	109
2.4. Use of Spin Labels as Antigenic Determinants Capable of Reporting Their Physical State.....	110
2.4.1. Background	110
2.4.2. Spin-Label Lipid Haptens .....	111
2.4.3. Determination of the Rate of Inside-Outside Transitions of Phospholipids in Vesicle Membranes .....	112
2.4.4. Determination of Lateral Diffusion of Spin-Label Lipid Haptens in Membranes .....	112
2.4.5. Determination of the Surface Area of Lipid Membranes .....	113
2.4.6. Antibodies Specific for Spin-Label Determinants .....	114
2.4.7. Physical Factors Affecting the Binding of Spin-Label Specific Antibodies to Hapten-Bearing Bilayers .....	116
2.4.8. Efferent Immune Responses Controlled by Antibodies Bound to Antigen-Bearing Membranes .....	121
3. Raman Spectroscopy by MARGARET R. BUNOW	
3.1. Introduction .....	123
3.2. Origin of the Raman Spectrum .....	124
3.3. Analysis of the Raman Spectrum.....	125
3.4. Resonance Raman Scattering .....	128
3.4.1. A-Term Scattering.....	129
3.4.2. B-Term Scattering .....	130
3.4.3. The Polarizability Tensor.....	130

3.5. Instrumentation .....	131
3.5.1. Sample Handling .....	132
3.5.2. Optimization and Standardization of Signal .....	132
3.5.3. Management of Fluorescence .....	133
3.6. Strategy of Raman Spectroscopic Applications in Biology .....	134
3.7. Conformational Studies .....	137
3.7.1. Conformation of Lipids in Biological Membranes .....	137
3.7.2. Conformation of Nucleic Acids .....	143
3.7.3. Raman Spectral Analysis of Polysaccharides .....	145
3.7.4. Raman Vibrational Analysis of Protein Conformation .....	146
3.7.5. Vibrational Markers of Protein Side-Groups .....	149
3.7.6. Resonance Raman Studies of Porphyrins and Hemoproteins .....	150
3.7.7. Resonance Raman Parameters for Nonheme Metalloproteins .....	154
3.7.8. Extrinsic Chromophores for Resonance Raman Studies of Proteins .....	155
3.7.9. Resonance-Enhanced Vibrational Behavior of Biological Polyenes .....	155
3.8. Kinetic Studies .....	156
3.9. Nonlinear Phenomena .....	159
3.10. The Raman Microscope .....	161
3.11. Conclusions and Prognostications .....	161
4. Picosecond Laser Spectroscopy by TAKAYOSHI KOBAYASHI	
4.1. Introduction .....	163
4.2. Nanosecond and Picosecond Spectroscopy .....	166
4.2.1. Comparison of Nanosecond and Picosecond Spectroscopy .....	166
4.2.2. Picosecond Light Pulses .....	170

4.2.3. Various Methods for Picosecond Absorption and Emission Spectroscopy.....	172
4.3. Applications to Photosynthesis and Vision .....	181
4.3.1. Photosynthesis .....	181
4.3.2. Vision	185
 <b>Appendix. Nonlinear Optical Phenomena, Optical Elements, and Detectors Related to Techniques of Picosecond Spectroscopy.....</b>	
A.1. Nonlinear Optical Phenomena.....	190
A.2. Optical Elements and Detectors .....	194
 <b>5. Fluorescence Methods for Studying Membrane Dynamics</b>	
by JOSEPH SCHLESSINGER AND ELLIOT L. ELSON	
5.1. Introduction .....	197
5.2. Molecular Rotation in Membranes.....	199
5.2.1. Steady-State Fluorescence Polarization .....	201
5.2.2. Nanosecond Time-Dependent Fluorescence Polarization.....	203
5.2.3. Decay of Transient Dichroism .....	204
5.2.4. Special Features and Limitations .....	205
5.3. Macroscopic Membrane Motions.....	208
5.3.1. Basic Concepts.....	208
5.3.2. Fluorescence Photobleaching Recovery .....	209
5.3.3. Fluorescence Correlation Spectroscopy .....	212
5.4. Applications .....	216
5.4.1. Translational and Rotational Diffusion of Molecules in Membranes and Membrane Viscosity .....	216
5.4.2. Possible Significance of Mobility and Immobility of Membrane Proteins .....	222
5.5. Recent Developments .....	224
5.5.1. Technical Developments .....	224
5.5.2. Origin of Constraints on Membrane Protein Mobility	225
5.5.3. Receptor Mobility .....	226

6. Structure Determination of Biological Macromolecules Using X-Ray Diffraction Analysis by EATON E. LATTMAN AND L. MARIO AMZEL	
6.1. Introduction .....	229
6.2. Diffraction by a General Object .....	230
6.3. Crystallography .....	237
6.3.1. Diffraction by Crystals .....	237
6.3.2. The Patterson Function .....	240
6.4. Protein Crystallography .....	244
6.4.1. Introduction .....	244
6.4.2. Crystallization .....	246
6.4.3. Collection of X-Ray Diffraction Data .....	247
6.4.4. Phase Determination Using Isomorphous Replacement .....	252
6.4.5. Interpretation of Electron Density Maps .....	256
6.4.6. Difference Fourier Syntheses .....	259
6.4.7. Molecular Replacement .....	260
6.4.8. Refinement of Protein Structures .....	263
6.4.9. A Case History: Rubredoxin.....	268
6.5. Fibers	275
6.5.1. Definition and Description.....	275
6.5.2. Fiber Diffraction Theory .....	276
6.5.3. Solution of Simple Fiber Structures .....	287
6.5.4. Tobacco Mosaic Virus Structure .....	288
6.5.5. Structure of Microtubules .....	293
6.5.6. Conclusion .....	296
7. Laser Light Scattering by RALPH NOSSAL	
7.1. Introduction .....	299
7.2. Theory	300
7.2.1. Classical Light Scattering .....	304
7.2.2. Intensity Fluctuation Spectroscopy .....	306

7.3. Instrumentation and General Techniques.....	310
7.3.1. Relationship between Photon Autocorrelation and Special Analysis.....	310
7.3.2. Characteristics of Measured Autocorrelation Functions	312
7.3.3. Equipment	313
7.4. Diffusion Coefficients .....	316
7.5. Large Particles .....	319
7.6. Determination of Electrophoretic Mobilities .....	324
7.7. Motility Measurements.....	326
7.8. Applications in Cell Biology .....	330
7.9. Blood Flow .....	331
7.10. Gels and Solutions of Fibrillous Proteins .....	333
8. Small-Angle Scattering Techniques for the Study of Biological Macromolecules and Macromolecular Aggregates by PETER B. MOORE	
8.1. Introduction .....	337
8.1.1. The Nature of the Technique .....	337
8.1.2. Historical Comments .....	338
8.1.3. The Sources of Current Interest.....	338
8.1.4. Purpose	339
8.1.5. Earlier Reviews .....	340
8.2. The Experimental Problem .....	341
8.2.1. The Scattering Signal .....	341
8.2.2. Isolation of the Macromolecular Signal .....	342
8.2.3. Small-Angle Apparatus: General Features .....	343
8.2.4. The Small-Angle Compromise .....	344
8.2.5. X Rays	345
8.2.6. Monochromatization of X Rays .....	346
8.2.7. Collimation .....	347
8.2.8. Flight Path.....	349

8.2.9. Detection .....	349
8.2.10. Beam Monitors.....	350
8.2.11. Apparatus Designs.....	351
8.2.12. Neutrons	352
8.2.13. Monochromatization of Neutrons .....	353
8.2.14. Pulsed Reactors .....	355
8.2.15. General Design: Collimation .....	356
8.2.16. Flight Path and Detection .....	357
8.2.17. Available Instruments.....	358
8.2.18. Absolute Intensity Measurements .....	358
8.2.19. Data Correction .....	360
8.3. Data Analysis .....	362
8.3.1. Molecular Weight and Partial Specific Volume .....	362
8.3.2. Molecular Size and Shape: Radius of Gyration.....	364
8.3.3. Quantities Related to the Radius of Gyration	365
8.3.4. Length Distributions .....	367
8.3.5. Characteristic Function Parameters.....	368
8.3.6. Molecular Shape .....	369
8.3.7. Spherical Objects.....	371
8.3.8. Contrast.....	372
8.3.9. The Dependence of Radius of Gyration on Contrast	372
8.3.10. Dependence of the Extended Scattering Profile on Contrast .....	374
8.3.11. Absolute Scale and Contrast Variation.....	374
8.3.12. Neutrons versus X Rays .....	375
8.3.13. The Hydrogen Exchange Problem .....	376
8.3.14. Contrast Variation in Practice: Radius of Gyration.....	378
8.3.15. Contrast Variation in Practice: Extended Scattering .....	380
8.3.16. Macromolecular Aggregates: Synthesis Methods	381
8.3.17. Macromolecular Aggregates: Distance Finding	383
8.3.18. Solution Scattering Studies on Molecules of Known Structure .....	385

8.4. Concluding Remarks.....	388
8.4.1. Summary	388
8.4.2. Critique	389
9. Electron Microscopy	
by ROBERT M. GLAESER	
9.1. Electron Microscopy as a Tool for Structure Determination.....	391
9.2. Image Formation in the Electron Microscope.....	395
9.2.1. A Simplified Picture: The Mass Thickness Approximation .....	395
9.2.2. The "Weak Phase Object" Model.....	397
9.2.3. Complications.....	398
9.3. Contrast Transfer Function Theory.....	401
9.3.1. Origin of Phase Contrast in Electron Microscopy .....	401
9.3.2. The Envelope Function: Partial Coherence .....	403
9.3.3. Image Restoration .....	404
9.3.4. Complications.....	406
9.4. Three-Dimensional Reconstruction .....	409
9.4.1. Fourier (Crystallographic) Methods.....	409
9.4.2. Direct-Space Methods .....	413
9.4.3. The Hollow Cone Problem .....	416
9.5. Radiation Damage .....	418
9.5.1. Radiation Physics and Radiation Chemistry .....	419
9.5.2. Empirical Studies of the Radiation Damage Effect under Electron Microscope Conditions .....	422
9.5.3. Shot-Noise Limitation for High-Resolution Electron Microscope Work .....	427
9.5.4. Solution of the Shot-Noise Problem by Image Superposition .....	427
9.6. Specimen Hydration within the Vacuum of the Instrument.....	430
9.6.1. The Need for Maintaining the Hydrated State with Complex Biological Structures .....	430
9.6.2. Difficulty of the Problem .....	430

9.6.3. Technical Solutions to the Hydration Problem	431
9.7. Recent Innovations in Experimental Methods.....	433
9.7.1. Dark-Field Methods .....	433
9.7.2. Single-Sideband Images and Holography .....	438
9.7.3. Image Formation with Inelastically Scattered Electrons	439
9.7.4. High-Voltage Electron Microscopy .....	441
9.7.5. Aberration Correction.....	444
10. Voltage Clamping of Excitable Membranes by FRANCISCO BEZANILLA, JULIO VERGARA, AND ROBERT E. TAYLOR	
10.1. Introduction .....	445
10.2. General Principles of Voltage Clamp.....	447
10.3. Axial-Wire Voltage Clamp.....	451
10.3.1. Cable Theory of an Axon with Axial Wire in Voltage Clamp .....	452
10.3.2. Giant Axon Preparation .....	455
10.3.3. Measurement of Membrane Current .....	459
10.3.4. Electronics for the Voltage Clamp System .....	461
10.3.5. Series-Resistance Compensation .....	463
10.3.6. Pulse Generation and Data Acquisition .....	470
10.4. Voltage Clamp with Microelectrodes .....	473
10.4.1. Two Microelectrodes .....	473
10.4.2. Three Microelectrodes .....	481
10.5. Voltage Clamp of an Isolated Patch Using External Pipettes .....	482
10.5.1. External Patch Isolation.....	482
10.5.2. Internal Access .....	484
10.6. Voltage Clamp with Gap Isolation Techniques .....	486
10.6.1. Node of Ranvier .....	487
10.6.2. Vaseline-Gap Techniques in Single Muscle Fibers .....	497
10.6.3. Sucrose-Gap Methods.....	500
10.6.4. Errors Introduced by the Finite Length of the Gap .....	501

10.7. Concluding Remarks .....	504
10.A. Appendix .....	504
10.A.1. Circuit Equations of Vaseline-Gap Voltage Clamp .....	504
10.A.2. Potential Distribution for a Fiber in a Gap Voltage Clamp .....	508
11. Lipid Model Membranes by G. SZABO AND R. C. WALDBILLIG	
11.1. Biological Membranes .....	513
11.2. Lipid Monolayers .....	515
11.3. Spherical Lipid Bilayers.....	516
11.4. Planar Lipid Bilayers .....	519
11.4.1. Lipid/Solvent Systems .....	520
11.4.2. Solvent-Filled Bilayers .....	521
11.4.3. Solvent-Depleted Bilayers .....	523
11.4.4. Pure Lipid Bilayers .....	524
11.5. Ion Transport Mechanisms .....	525
11.6. Techniques for the Measurement of Ion Transport.....	528
11.7. Direct Transport of Hydrophobic Ions .....	529
11.8. Carrier-Mediated Ion Transport .....	530
11.9. Molecular Channels.....	535
11.9.1. Single Channels in Bilayers .....	536
11.9.2. Multichannel Bilayers .....	539
11.10. Relationship between Channel Structure and Function.....	541
AUTHOR INDEX.....	545
SUBJECT INDEX.....	565
