PREFACE	xiii
LIST OF VOLUMES IN TREATISE	xvii

1. Radiotracer Techniques

1.1. Introduction	1
by J. N. MUNDY AND S. J. ROTHMAN	
1.1.1. The Use of Radiotracers	1
1.1.2. Introduction to Radioactivity	1
1.2. Production of Radioisotopes	11
by J. N. MUNDY AND S. J. ROTHMAN	
1.2.1. Principles of Isotope Production	11
1.2.2. Determination of Yields and Specific Activities	17
1.2.3. Isotope Production Reactions	18
1.2.4. Chemical Processing in Radioisotope Production	22
1.2.5. Parameter Selection in Isotope Production	25
1.2.6. Purchase of Radioisotopes	26
1.3. Handling of Radioisotopes	27
1.3.1. Safety	27
by M. ROBINET	
1.3.2. Source Preparation	40
by S. J. ROTHMAN AND J. N. MUNDY	
1.4. Detection and Assay	44
1.4.1. Autoradiography	44
by S. J. ROTHMAN AND J. N. MUNDY	
1.4.2. Radiation Detectors for Pulse Counting	50
by J. N. MUNDY AND S. J. ROTHMAN	
1.4.3. Pulse-Counting Systems	55
by M. J. FLUSS, J. N. MUNDY, AND S. J. ROTHMAN	
1.4.4. Radioactive Particle Counting	60
by M. J. FLUSS, J. N. MUNDY, AND S. J. ROTHMAN	

1.4.5. Total Relative Counting	64
by J. N. MUNDY AND S. J. ROTHMAN	
1.4.6. Isotope Effects	70
by S. J. ROTHMAN AND J. N. MUNDY	
Bibliography	74
2. Experimental Methods of Positron Annihilation for the Study of Defects in Metals	
by L. C. SMEDSKJAER AND M. J. FLUSS	
2.1. Introduction	77
2.2. Basic Theory	78
2.2.1. The Positron	78
2.2.2. Positronium	78
2.2.3. Electron Momenta	79
2.2.4. Positrons in Defects.	80
2.2.5. Positron Sources	81
2.2.6. Thermalization of the Positron	82
2.2.7. Trapping of Positrons	82
2.2.8. The Trapping Model	85
2.3. Positron Studies and Metal Physics	87
2.3.1. Surface Studies.	89
2.3.2. Vacancy Formation Enthalpy	89
2.3.3. Vacancy–Impurity Binding	92
2.3.4. Annealing Studies of Defects.	93
2.3.5. Electron Structure	94
2.4. Detection of Annihilation Radiation	95
2.4.1. Resolution Considerations.	95
2.4.2. Counting Rate and Resolution	97
2.4.3. Detector Systems	97
2.4.4. Doppler Broadening	98
2.4.5. Angular Correlation	106
2.4.6. Lifetime.	122
2.5. Instabilities (Detectors and Electronics)	139
2.6. Some Final Remarks	143

3. Neutron Scattering Studies of Lattice Defects

3.1. Static Properties of Defects	147
by W. SCHMATZ	
3.1.1. Introduction	147
3.1.2. Theoretical Background	149
3.1.3. Experimental Techniques	158
3.1.4. Typical Results.	167
3.2. Dynamic Properties of Defects	172
by R. M. NICKLOW	
3.2.1. Introduction	172
3.2.2. Perfect Crystals.	173
3.2.3. Defect Dynamics: Theory and Experiment.	182
3.3. Diffusion Studies	194
by N. WAKABAYASHI	
3.3.1. Introduction	194
3.3.2. Neutron Scattering Cross Sections and Correlation Functions	195
3.3.3. Incoherent Scattering and the Jump Model of Diffusion	198
3.3.4. Information Obtained from Coherent Scattering Processes	206
3.3.5. Samples and Instruments	211
3.3.6. Data Reduction	217
3.3.7. Future Directions.	219

4. Ion Beam Interactions with Solids

4.0. Introduction	221
by L. M. HOWE, M. L. SWANSON, AND J. A. DAVIES	
4.1. Compositional Studies	222
by N. CUE	
4.1.1. Ion Backscattering Spectrometry	223
4.1.2. Nuclear Reaction Analysis.	244
4.1.3. Particle-Induced X-Ray Emission.	250
4.1.4. Secondary Particle Emission	256

4.2. Channeling Studies of Lattice Defects	275
by L. M. HOWE, M. L. SWANSON, AND J. A. DAVIES	
4.2.1. Introduction	275
4.2.2. Basic Channeling Theory	283
4.2.3. Experimental Techniques	297
4.2.4. Investigation of Lattice Disorder	303
4.2.5. Lattice Site Location of Solute Atoms	322
4.2.6. Surface Studies	345
4.2.7. Conclusions	358
5. Magnetic Resonance Methods for Studying Defect Structure in Solids	
by DAVID C. AILION AND WILLIAM D. OHLSEN	
5.1. Introduction	361
5.1.1. Basic Phenomenon of Magnetic Resonance	361
5.1.2. Relaxation Times T_1 and T_2	364
5.1.3. Bloch Equations	367
5.1.4. The Nature of Magnetic Resonance Information	371
5.2. Nuclear Magnetic Resonance Spectrometer Design	373
5.2.1. Pulse versus Continuous-Wave Spectrometers	374
5.2.2. Pulse NMR Spectrometer Design	375
5.3. Applications of Nuclear Magnetic Resonance	391
5.3.1. Line-Shape Studies	391
5.3.2. Quadrupole Resonance	394
5.3.3. Electron–Nuclear Magnetic Interactions	398
5.3.4. NMR Imaging	403
5.4. Electron Paramagnetic Resonance	405
5.4.1. Electron Resonance Spectra	405
5.4.2. Electron–Crystal Interactions	406
5.4.3. Spectrometer Design Considerations	407
5.4.4. Representative Studies	423
5.5. Additional Perturbations	428
5.5.1. Light	428
5.5.2. Stress	429
5.5.3. Electric Fields	430

5.6. Double-Resonance Techniques	430
5.6.1. Nuclear–Nuclear Double Resonance	430
5.6.2. Electron–Nuclear Double Resonance	432
5.6.3. Dynamic Nuclear Polarization	435
5.6.4. Other Double-Resonance Techniques	436
6. Nuclear Magnetic Resonance Relaxation Time Methods for Studying Atomic and Molecular Motions in Solids by DAVID C. AILION	
6.1. Introduction	439
6.2. Conventional Relaxation Time Methods	441
6.2.1. Motional Narrowing of the Linewidth or the Spin–Spin Relaxation Time (T_2)	441
6.2.2. Spin–Lattice Relaxation Time (T_1)	447
6.3. Ultraslow Motion Techniques	453
6.3.1. Spin–Lattice Relaxation in the Rotating Frame ($T_{1\rho}$)	454
6.3.2. Dipolar Relaxation (T_{1D})	460
6.3.3. Dipolar Relaxation in the Rotating Frame ($T_{1D\rho}$)	465
6.4. Methods for Calibration and Other Auxiliary Experiments	469
6.4.1. Determination of Exact Resonance	469
6.4.2. Calibrated H_1 Monitor	470
6.4.3. Determination of the Local Field in the Rotating Frame	471
6.5. Applications of Nuclear Magnetic Resonance Techniques to Motional Studies in Solids	472
6.5.1. Diffusion	472
6.5.2. Molecular Reorientations	479
AUTHOR INDEX	483
SUBJECT INDEX	494
