PREFACE	xv
LIST OF VOLUMES IN TREATISE	xvii
1. Spin-Polarized Electron Sources by DANIEL T. PIERCE	
1.1. Introduction	1
1.2. Background	3
1.3. The Photocathode	11
1.4. Incident Radiation	22
1.5. Operation of the Photocathode in an Electron Gun	24
1.6. Summary	30
Appendix A: Cleaning GaAs	33
Appendix B: Anodization of GaAs	34
References	35
2. Positron and Positronium Sources by A. P. MILLS, JR.	
2.1. Introduction	39
2.2. Positron Sources	39
2.3. Moderation	46
2.4. Transport, Lenses, and Mirrors	50
2.5. Remoderation	51
2.6. Trapping and Bunching	53

2.7. Positronium Formation	55
2.8. Summary and Conclusion	62
References	62
3. Sources of Low-Charge-State Positive-Ion Beams	
G. D. ALTON	
3.1. Introduction	69
3.2. Arc Plasma Discharge Ion Sources	74
3.3. Radiofrequency (RF) Discharge Ion Sources	116
3.4. Electron-Cyclotron Resonance and Microwave Ion Sources	123
3.5. Vacuum-Arc Ion Sources	129
3.6. Sources Based on Field Ionization and Field Evaporation	134
3.7. Surface Ionization and Thermal Emitter Ion Sources	147
3.8. Thermal Ionization Sources	159
References	162
4. Advanced Sources of Highly Charged Ions	
RONALD A. PHANEUF	
4.1. Introduction	169
4.2. The Electron-Beam Ion Source	172
4.3. The Electron-Cyclotron Resonance Ion Source	177
4.4. Other Techniques	185
References	187

5. Electron and Ion Optics	
GEORGE C. KING	
5.1. Introduction	189
5.2. Collimation and Definition of a Charged Particle Beam	191
5.3. Electrostatic Lenses	193
5.4. Designing Electrostatic Lens Systems	201
5.5. Computer Simulation Programs	204
References	207
6. Electron Energy Analyzers	
J. L. ERSKINE	
6.1. Introduction	209
6.2. Electron Energy Analyzing Systems	209
6.3. Trajectories and Focusing in Dispersive Deflection Analyzers	215
6.4. Fringing Fields, Terminations, and Guard Rings	220
6.5. Input Lenses and Operating Modes	221
6.6. Multichannel Energy Detection and Imaging	226
6.7. Construction Hints and Practical Details	227
References	228
7. Electron Polarimetry	
TIMOTHY J. GAY	
7.1. Introduction	231
7.2. Electron Polarimeters	234
7.3. Calibration Methods	243

7.4. Systematic Errors	245
7.5. Comparison of Polarimeters	247
References	250
8. Position Sensitive Particle Detection with Microchannel-Plate Electron Multipliers KEN SMITH	
8.1. Microchannel Plates	253
8.2. Position-Sensitive Readout Systems	259
8.3. Conclusion	270
References	270
9. Swarm Techniques DAVID SMITH and PATRIK ŠPANĚL	
9.1. Introduction	273
9.2. Afterglow Plasma Techniques	276
9.3. The Selected Ion Flow Tube Technique	285
9.4. Drift Tube Techniques	290
9.5. Swarm Experiments at Very Low Temperatures: The CRESU Technique	293
9.6. Concluding Remarks	295
References	295
10. Accelerator-Based Atomic Physics C. R. VANE and S. DATZ	
10.1. Introduction	299

10.2. Advantages of Accelerator-Based Atomic Physics (ABAP)	300
10.3. Types of Accelerators Used in Accelerator-Based Atomic Physics	306
10.4. Electrostatic Accelerators	307
10.5. Electrodynamic Accelerators	312
References	319
11. Ion Mass Analyzers PETER W. HARLAND	
11.1. Introduction	321
11.2. Motion of Charged Particles in Electric and Magnetic Fields	322
11.3. Uniform Electric Fields	323
11.4. Uniform Magnetic Fields	335
11.5. Superimposed Electric and Magnetic Fields	340
References	346
12. Ion Traps HUGH A. KLEIN	
12.1. Introduction	349
12.2. Types of Ion Trap	350
12.3. Trap Construction	352
12.4. Trapped Ion Detection, Diagnostics, and Cooling	356
References	359

13. Ultra-High-Resolution Mass Spectroscopy in Penning Traps ROBERT S. VAN DYCK, JR.	
13.1. Introduction	363
13.2. Trap Construction and Confinement	365
13.3. Basic Axial Resonance	368
13.4. Preparing the Ion Sample	371
13.5. Sideband Cooling Resonances	372
13.6. Magnetic Field Stability	374
13.7. Frequency-Shift Detector	376
13.8. Anharmonic Detection	378
13.9. The Ejection-Detection Method	380
13.10. The Pulse-and-Phase Method	382
13.11. Perturbations to the Cyclotron Frequency	384
References	387
14. Electron Beam Ion Traps ROSCOE E. MARRS	
14.1. Introduction	391
14.2. Principles of EBIT Operation	393
14.3. The 200-keV EBIT	400
14.4. X-ray Spectroscopy	402
14.5. Electron–Ion Collisions	410
14.6. Extraction of Highly Charged Ions from an EBIT	417
References	418
15. DC Current Measurements THOMAS J. MEGO	
15.1. Introduction	421

15.2. Description and Comparison of Current Amplifiers	422
15.3. Signal Quantification and Conversion	431
15.4. Practical Experimental Considerations	432
References	434
16. Signal Enhancement	
JOHN R. WILLISON	
16.1. Introduction	437
16.2. Noise Sources	438
16.3. Amplifiers	443
16.4. Signal Analysis	445
References	450
INDEX	453
