

CONTENTS

CONTRIBUTORS	xiii
PREFACE	xv
VOLUMES IN SERIES	xvii

1. Thermal Beam Sources

NORMAN F. RAMSEY

1.1. Introduction	1
1.2. Theoretical Principles	2
1.3. Sources	9
References	19

2. Supersonic Beam Sources

MICHAEL D. MORSE

2.1. Introduction	21
2.2. Effusive Beams	21
2.3. Supersonic Expansion from Circular Nozzles (Axisymmetric Jets)	22
2.4. Clustering	31
2.5. Supersonic Expansions from Slit Nozzles (Plane Jets)	33
2.6. Implementation and Applications	36
References	43

3. Fast Beam Sources

A. CHUTJIAN and O. J. ORIENT

3.1. Introduction	49
3.2. Types of Sources	50
References	63
4. Vapor Cells and Heat Pipes	
C. R. VIDAL	
4.1. Introduction	67
4.2. Thermal Vapor Cells	67
4.3. The Closed Heat Pipe	68
4.4. The Open-Ended Heat Pipe Oven	69
4.5. The Concentric Heat Pipe Oven	74
4.6. Crossed Concentric Heat Pipe Oven	76
4.7. Modified Concentric Heat Pipe Oven for Mixtures of Different Vapors	78
4.8. General Technical Considerations for the Heat Pipe Oven	82
References	82
5. Free Radical Sources	
K. M. EVENSON and J. M. BROWN	
5.1. Electrical Discharges	85
5.2. Photolysis	89
5.3. Chemical Formation	90
5.4. Laser Ablation	91
5.5. Thermal Generation	91
5.6. Supersonic Expansion	92
References	93

6. Sources of Metastable Atoms and Molecules

TIMOTHY J. GAY

6.1. Introduction	95
6.2. Electron-Beam Bombardment Sources	98
6.3. Discharge Sources	101
6.4. Charge-Transfer Sources	105
6.5. Optical-Pumping Sources	106
6.6. Thermal Sources	107
6.7. Beam Modification and Analysis	108
References	110

7. Production of Rydberg Atoms

T. F. GALLAGHER

7.1. Introduction	115
7.2. Overview of the Methods	115
7.3. Electron Impact Excitation	117
7.4. Charge Exchange	119
7.5. Optical Excitation	121
7.6. Collisional-Optical Excitation	125
References	127

8. Laser Cooling and Trapping of Neutral Atoms

CURTIS C. BRADLEY and RANDALL G. HULET

8.1. Introduction	129
8.2. Laser Cooling	130
8.3. Atom Beam Cooling	132
8.4. Trapping	135

8.5. Evaporative Cooling	140
References	141
9. Optical State-Preparation of Atoms	
JABEZ J. MCCLELLAND	
9.1. Introduction	145
9.2. Basic Concepts	146
9.3. Calculations of the Optical Pumping Process	147
9.4. Calculations and Experimental Reality	158
9.5. Diagnosis of an Optically Pumped Beam	161
9.6. Specific Atoms	163
References	168
10. Methods and Applications of Resonance Ionization Spectroscopy	
G. SAMUEL HURST and JAMES E. PARKS	
10.1. Introduction	171
10.2. RIS Schemes and Laser Sources	173
10.3. Atom Counting	178
10.4. SIRIS and LARIS	182
10.5. Thermal Atomization Methods	187
10.6. On-Line Accelerator Applications	189
References	189
11. Detection of Metastable Atoms and Molecules	
H. HOTOP	
11.1. Introduction	191

11.2. Methods for the Detection of Metastable Species	193
11.3. Absolute Detection of Metastable Atoms	206
References	211
12. Excited Level Lifetime Measurements	
J. E. LAWLER and T. R. O'BRIAN	
12.1. Introduction	217
12.2. Measurement of Radiative Lifetimes	219
12.3. Time-Resolved Laser Induced Fluorescence	
Lifetime Measurements	220
12.4. Beam Foil Lifetime Measurements	231
12.5. Fast Beam Laser Experiments for	
Lifetime Measurements	234
12.6. Measurement of Long Lifetimes in Trapped Ions	239
12.7. Branching Fraction Measurements	243
12.8. Precision Measurement of Absorption	
Oscillator Strengths	248
References	250
13. Doppler-Free Spectroscopy	
JAMES C. BERGQUIST	
13.1. Introduction	255
13.2. Spectral Line-Broadening Mechanisms	255
13.3. Spectral Line-Narrowing Techniques	257
13.4. Saturated Absorption with Ramsay	
Interference Fringes	260
13.5. Two-Photon Spectroscopy	265

13.6. Trapped Particle Spectroscopy at the Dicke Limit	267
References	270
14. Microwave Spectroscopy	
R. D. SUENRAM and ANNE M. ANDREWS	
14.1. Introduction	273
14.2. Microwave Spectroscopy with Conventional Spectrometers	274
14.3. Molecular Beam Electric Resonance Opto-thermal Spectrometers	282
14.4. Fourier Transform Microwave Spectroscopy	287
14.5. Slit-Jet Microwave Spectrometers	295
References	296
15. Fast Beam Spectroscopy	
LINDA YOUNG	
15.1. Introduction	301
15.2. Background	302
15.3. Studies of Atoms	305
15.4. Studies of Molecules	314
15.5. Metrology	318
15.6. Summary and Outlook	319
References	320
16. Quantum-Beat, Level-Crossing, and Anticrossing Spectroscopy	
T. F. GALLAGHER	
16.1. Introduction	325

16.2. Quantum Beats	325
16.3. Hanle Effect and Level-Crossing Spectroscopy	332
16.4. Anticrossing Spectroscopy	335
References	339
17. Atom Interferometry	
OLIVIER H. CARNAL and JÜRGEN MLYNEK	
17.1. Introduction	341
17.2. Basic Concepts	342
17.3. Beam Splitters for Atoms: A Short Review	344
17.4. Realizations of Atom Interferometers	348
17.5. Proposals for Atom Interferometers	356
17.6. Summary and Outlook	358
References	359
18. Classical Spectroscopy	
J. BLAND-HAWTHORN AND G. CECIL	
18.1. Introduction	363
18.2. Basic Principles	363
18.3. Prisms	369
18.4. Diffraction Gratings	370
18.5. Multiple-Beam Interferometers	377
18.6. Two-Beam Interferometers	386
References	390
19. Pulsed Laser Raman Spectroscopy of Dynamic Systems	
CARTER KITTRELL	

19.1. Introduction	393
19.2. Raman Scattering	394
19.3. Product Formation and <i>in Situ</i> Monitoring	403
19.4. Excited States and Transient Species	404
19.5. Laser Raman Spectrometer Systems	406
19.6. Spectrometers	413
19.7. Conclusion	420
References	420
INDEX	429
