## MODE DISCRIMINATION AND THE SELF-LOCKING EFFECT IN SOLID-STATE LASERS USING A BLEACHABLE FILTER

A. S. Markin

Introduction	1
Chapter 1. Q Switching of Lasers by Means of a Passive Shutter	5
1. Operating Principle and Types of Passive Shutters	5
2. Q Switching of Neodymium Glass Lasers by Means of a Bleachable Liquid Filter	6
3. Dependence of the Width and Shape of the Giant Pulse on the Population Inversion Coefficient	11
Chapter 2. Spectral Composition of Solid-State Laser Emission and Mode Discrimination by Various Cavity Elements	18
1. Spectral Composition of Solid-State Laser Emission	18
2. Mode Discrimination in Neodymium Glass Lasers with a Passive Shutter Due to Fresnel Reflection at the Ends of the Active Rod	19
3. Selective Properties of Various Cavity Elements and Their Influence on the Emission Spectrum of Solid-State Lasers	29
Chapter 3. Development of the Emission Pulse in the Case of Passive Switching	36
1. Giant-Pulse Buildup in a Q-Switched Laser	36
2. Determination of the Giant-Pulse Buildup Time in a Neodymium Glass Laser with a Passive Shutter	39
3. Determination of the Buildup Time for a Free-Oscillation Spike in a Neodymium Glass Laser	42
Chapter 4. Self Mode Locking in a Solid-State Laser Using a Bleachable Filter	43
1. Theoretical Model of the Self-Locking Process	43
2. Dependence of the Self-Locking Effect on the Position of the Bleachable Filter in the Cavity	46
3. Self-Locking in Neodymium Glass and Ruby Lasers with a Bleachable Filter in the Case of a Broad Emission Spectrum; Ultimately Narrow Width of Ultrashort Pulses in Lasers of This Type	51
Literature Cited	56

DETECTION AND INVESTIGATION OF STIMULATED EMISSION  
IN A PINCHED DISCHARGE

V. M. Sutovskii

Introduction	61
Chapter 1. State of the Art of Pulsed Ionic Laser Research	62
Chapter 2. On the Creation of Negative-Temperature States in a Pinch-Discharge Plasma	70
1. Physical Processes in a Pinch Discharge	70
2. Possible Mechanisms of the Formation of Negative-Temperature States in the Pinch-Discharge Plasma	78
3. On the Experimental Program	78
Chapter 3. Investigation of the Characteristics of a Pinch Discharge	79
1. Description of the Experimental Setup	79
2. Discharge Electrotechnical Parameters	81
3. Probe Measurements of Current Distribution over the Discharge Tube Cross Section	82
4. High-Speed Photoscanning of Pinch Radiation	84
5. Discharge Spectral Characteristics	85
Chapter 4. Properties of Stimulated Emission in a Pinch-Discharge Plasma at the Transitions of Singly and Doubly Ionized Argon Atoms	86
1. Properties of Emission by Ar II Ions	87
2. Emission at Ar III Transitions in the Ultraviolet Spectral Region	91
3. Emission in Subsequent Discharge Current Half-periods	93
4. Emission at the 4764.89 Å Line for Discharge Current Pulses Having a High Repetition Rate	94
Chapter 5. Determination of the Parameters of the Pinch-Discharge Plasma	96
1. Theoretical Foundation of the Applicability of Plasma Diagnostic Methods	96
2. Measurement Procedure and Results	100
3. Feasibility of Plasma Diagnostics Based on the Self-Induced Emission of a Pinch Discharge	103
Discussion	105
Literature Cited	109

PHYSICAL PROCESSES IN MOLECULAR HYDROGEN, DEUTERIUM, AND  
FIRST-POSITIVE-BAND-SYSTEM NITROGEN PULSED GAS-DISCHARGE LASERS

I. N. Knyazev

Introduction	113
Chapter 1. State of the Art of Research on Pulsed Gas-Discharge Lasers; Statement of the Problem	115
1. General Description of Pulsed Gas Laser Research	115
2. Brief Survey of the Literature on Lasers Operating on Electron Transitions in Diatomic Molecules; Statement of the Problem	117

Chapter 2. Experimental Methodological Problems	121
1. The Laser and Its Excitation Circuit	121
2. Spectral Measurements	123
3. Gas-Discharge Measurement Technique	125
Chapter 3. Pulsed Emission from $H_2$ , $D_2$ , and HD Molecules	126
1. The Stimulated Emission Spectrum	126
2. Electron States and Transitions in $H_2$ , $D_2$ , and HD Molecules; Qualitative Inversion Mechanism	130
3. Singular Characteristics of the Excitation of Rotational Spectral Structure in Hydrogen and Deuterium Lasers	133
Chapter 4. Temporal and Energy Characteristics of the First-Positive-Band-System Molecular Nitrogen Laser	136
Chapter 5. Stimulated Emission Spectrum of the $N_2(1+)$ Laser and Interpretation of the Vibrational-Rotational Structural Features of this Spectrum	140
1. The Stimulated Emission Spectrum	140
2. Electron States and Transitions in $N_2$ ; Analysis of Excitation of the Vibrational and Rotational Structure of the Laser Emission Spectrum	145
Chapter 6. Aspects of the Physics of Pulsed Discharge	151
1. Pulsed-Discharge and Inversion Dynamics of the $N_2(+1)$ Laser	151
2. Temporal Evolution of the High-Current Discharge Phase; Physical Model of Discharge	155
Chapter 7. Population Dynamics of the Upper Laser Levels in the $1+$ Band System of $N_2$	159
1. On the Excitation Mechanism for the Upper Laser Levels	159
2. Critical Analysis of the Mechanism of Step-by-Step Filling of the Laser Levels	161
3. Lasing Cutoff Mechanism; Simplified Laser-Level Diagram	163
Chapter 8. Elementary Quantitative Theory of Laser Action in the $1+$ Band System of $N_2$ .	167
1. Population Inversion Dynamics . . . . .	167
2. On the Ultimate Laser Power . . . . .	171
3. Ultimate Efficiency of the $N_2(1+)$ Laser	175
Conclusion	177
