

CONTENTS

Some Trends in Laser Development L. A. Shelepin	1
Introduction 1	
1. The Physical Kinetics of Lasers	1
2. Electrical Lasers Using Vibrational-Rotational Molecular Transitions	4
(a) Continuous Electrical Lasers	4
(b) Pulsed Lasers	5
(c) Electroionization Lasers	5
(d) TEA Lasers	5
3. Chemical Lasers	5
4. Gas-Dynamic Lasers	6
(a) Chemical Gas-Dynamic Lasers	6
(b) Electro-Gas-Dynamic Lasers	6
(c) High-Temperature Lasers	6
5. Far Infrared Lasers	7
6. Plasma Lasers	7
(a) Electrical Plasma Lasers	7
(b) Moving Plasma Lasers	7
(c) Plasma Chemical Lasers	8
7. The Interaction of Laser Radiation with Matter. The Limits of Applicability of Population Kinetics	8
Literature Cited	8
The Physical Kinetics of Gas-Dynamic Lasers A. S. Biryukov	11
Introduction 11	
Chapter I	
The Problems of Molecular Kinetics. A Review of the Literature	12
1. A Brief Review of Published Data on Gas-Dynamic Lasers	12
2. The Kinetic Equations for Vibrational Relaxation	14
3. Calculation of Cross Sections for Vibrational Transitions Involving Degenerate Oscillators	22
4. Utilization of Experimental Data on Vibrational Relaxation Times	25
Chapter II	
The Physical Kinetics of Gas-Dynamic Lasers	27
1. Population Inversion in the Vibrational Levels of CO ₂ During Adiabatic Expansion into a Vacuum	27

2.	A Method for Calculating the Vibrational Relaxation of a $\text{CO}_2 - \text{N}_2 - \text{He}$ Mixture in a Supersonic Nozzle	33
3.	A Gas-Dynamic Laser with a Supersonic Nozzle. Effect of the Nozzle Shape on Laser Operation for $T_0 \leq 2500^\circ\text{K}$	40
Chapter III		
	Chemical and Nonequilibrium Vibrational Processes in the Mixtures Used in Gas-Dynamic Lasers. Chemical Gas-Dynamic Lasers	46
1.	Gas-Dynamic Lasers Using Combustion Products	46
2.	Recombination Processes in Molecular Lasers	49
3.	The Mechanism of Nonresonance Vibrational Exchange in Gas-Dynamic Lasers	52
Chapter IV		
	Electrical and Gas-Dynamic Processes. Electrical Gas-Dynamic Lasers	58
1.	Electrical Methods of Producing an Inversion, Their Limitations, and the Role of Gas Dynamics	58
2.	Electrical Gas-Dynamic Lasers	62
Chapter V		
	High-Temperature Gas-Dynamic Lasers	68
1.	The Role of Chemical Reactions in the Operation of a Gas-Dynamic Laser	68
2.	Thermal Ionization and High-Temperature Gas-Dynamic Lasers	72
Chapter VI		
	Nonequilibrium Processes and Infrared Radiation in the Wake of an Object Flying through the Upper Atmosphere	73
	Literature Cited	83
Electrical Gas-Dynamic Lasers with Thermal Ionization		
	A. S. Biryukov, V. M. Marchenko, and L. A. Shelepin	89
	Literature Cited	101
The Theory of Plasma Lasers		
	L. I. Gudzenko, L. A. Shelepin, and S. I. Yakovlenko	103
Introduction		
Chapter I		
	Relaxation Processes in a Dense, Low-Temperature Plasma	104
1.	Plasma Lasers and Problems in Kinetics	104
2.	The Probabilities of Elementary Processes	105
	(a) Radiative Transitions	105
	(b) Collisions with Electrons	106
	(c) Dissociative Recombination	107
	(d) Collisions with Heavy Particles	107
3.	Population and Temperature Relaxation Equations	107
	(a) The Equations for the Populations	108
	(b) The Thermal Balance Equations	109
4.	Population Relaxation. Basic Approximations	109
	(a) The Constant (or Stationary) Sink Approximation	109
	(b) The Single-Quantum Approximation	111
	(c) The Diffusion Approximation	112
	(d) The Preferred-Sink Approximation	112

Chapter II	
Plasma Lasers	113
5. Ionization (Gaseous Discharge) Lasers	113
6. Recombination (Plasma) Lasers	116
Chapter III	
Recombination Mechanisms for Population Inversion in Atoms and Ions	117
7. Population Inversion in a Plasma of Simple Chemical Composition	117
(a) Radiative Depopulation of the Lower Working Level	118
(b) Deexcitation by Electrons	118
8. Plasma with Two Chemical Constituents	119
(a) Effect of an Impurity on the Character of the Nonequilibrium	120
(b) The Population Inversion	121
Chapter IV	
Atomic and Ionic Plasma Lasers	123
9. Lasing in the Afterglow of an Electric Field Pulse	123
10. Continuously Pumped Plasma Lasers	126
(a) Electron Beam Plasma Lasers	128
(b) Atomic Reactor Laser	128
11. Lasing in a Moving Plasma	129
(a) Plasma-Dynamic Lasers	129
(b) Compressed Plasma Lasers	131
(c) Plasma Jets. MHD Lasers	131
Chapter V	
Plasma Chemical Lasers	132
12. Chemical Depopulation of Lower Atomic Levels	132
13. Plasma Lasers Using Disintegrating (Dissociating) Molecules. A Scheme for Filling an Excited State. Conditions for Amplification	134
(a) Relaxation Channels	135
(b) Ideal Case	136
(c) Conditions for Amplification	137
14. Problems in Making Plasma Lasers Using Dissociating Molecules	138
Chapter VI	
Short-Wavelength Plasma Lasers	141
15. Vacuum Ultraviolet Lasers	141
15. The X-Ray Laser Problem	143
(a) The Power Source for an X-Ray Laser	143
(b) The Principle of Creating an Inverted Population. Composition of the Medium	144
(c) Conditions for Energy Input	144
Literature Cited	145
 The Kinetics of Plasma and Rotational Transition Lasers	 151
S. A. Reshetnyak	
Introduction	151
Chapter I	
Rotational Kinetics and Far Infrared (FIR) Molecular Lasers	152
1. Rotational Kinetics of Diatomic Molecules	152
2. Lasing on Transitions of Multiatomic Molecules (Far Infrared and Submillimeter Ranges)	159

3. Rotational Energy Distribution Functions and Rotational Transition Lasers (Discrete Model)	163
Chapter II	
Quasistationary Population Distribution Functions in Low-Temperature Plasma	167
1. The Level Population Distribution Function for Hydrogen	167
2. Level Populations in Atoms. Plasma Lasers	177
3. The Level Population Distribution Function of Atoms in Mixtures	180
Chapter III	
The Kinetics of Moving Plasma Lasers	185
1. Plasma-Dynamic Lasers	185
2. Pinch Discharge Lasers	193
Chapter IV	
Some Problems in the Kinetics of Plasmas with Multiply Charged Ions	199
1. The Physical Processes in a "Hot" Plasma and Their Uses	199
2. An Analysis of High Current Discharges with a Return Current	202
3. The Theory of a High Current ac Pinch Discharge	207
4. The Ionization State Distribution Function in a Multiply Charged Ion Plasma.	
Laser-Produced Plasmas	212
Conclusion	219
Literature Cited	219
