

CONTENTS

Stimulated Mandel'shtam – Brillouin Scattering

Lasers

V. V. Ragul'skii

Introduction	1
Chapter I	
Conditions for Obtaining Stationary Lasing with Stimulated Scattering of Light	4
§ 1. Influence of Intensity, Energy Density, and Exciting-Radiation Pulse Duration on the Laser Operation	4
§ 2. Experimental Verification of the Conditions for Stationary Lasing	6
Chapter II	
Gains and Line Widths for SMBS in Gases	10
Chapter III	
Single-Frequency SMBS Ring Laser	14
§ 1. Feasibility of Effective Conversion of Pump Radiation	14
§ 2. Single-Frequency SMBS Laser	15
Chapter IV	
Operation of SMBS Amplifier in the Saturation Regime	20
§ 1. Characteristics of SMBS Amplifier in the Stationary Regime	20
§ 2. Experimental Investigation of Amplifier Operation in the Saturation Region	22
Chapter V	
Q Switching by SMBS	24
§ 1. Lasing Dynamics	24
§ 2. Conditions under Which Q Switching Is Possible	28
§ 3. Experimental Verification of the Q-Switching Conditions	29
Chapter VI	
Inversion of the Exciting-Radiation Wave Front in SMBS	30
§ 1. Comparison of the Wave Fronts of the Exciting and Scattered Light with the Aid of a Phase Plate	30
§ 2. Influence of the Structure of the Exciting Radiation Field on the Shape of the Scattered-Light Front	33
§ 3. Compensation for the Phase Distortions in an Amplifying Medium with the Aid of a "Brillouin Mirror"	35
Chapter VII	
SMBS in the Case of Exciting Radiation with a Broad Spectrum	37
Appendix	
Experimental Technique	41
§ 1. Divergence Measurement Procedure	41
§ 2. Cell for Optical Investigations of Compressed Gases	42

§ 3. Faraday Decoupler	43
§ 4. Single-Mode Ruby Laser with Pulse Duration 60 nsec	43
§ 5. Single-Mode Ruby Laser with Pulse Duration 60-200 nsec.	45
§ 6. Fabry-Perot Etalon with 46-cm Base	45
Literature Cited	46
Compressed-Gas Lasers	
V. A. Danilychev, O. M. Kerimov, and I. B. Kovsh	
Introduction	49
Chapter I	
Electroionization Method of Exciting Compressed-Gas Lasers	52
§ 1. Mechanism of Current Flow through the Active Medium of an Electroionization Laser	54
§ 2. Experimental Technique	58
2.1. Construction of Laser Chambers	58
2.2. Optical Resonators	63
2.3. Measurements of Laser Parameters	65
§ 3. Electric Characteristics of Active Medium.	68
3.1. Calculation of the Characteristics of the Discharge Excited by the Electroionization Method.	68
3.2. Experimental Investigation of a Nonautonomous Discharge Initiated in a Compressed Gas by an Intense Electron Beam - Discussion of Results	73
Chapter II	
Electroionization CO ₂ High-Pressure Laser	84
§ 1. Kinetics of Population of Working Levels; Gain of Active Medium of Electroionization CO ₂ Laser	86
§ 2. Threshold Characteristics, Output Energy, Power, and Efficiency of Laser; Divergence of the Radiation	89
§ 3. Gain Spectrum of Electroionization CO ₂ Laser	97
§ 4. Relaxation of Upper Laser Level at High Pressures	104
§ 5. Operating Regimes of Electroionization CO ₂ Lasers	109
Chapter III	
High-Pressure Gas Lasers Using Other Working Media	112
§ 1. Electroionization CO Laser	114
§ 2. Laser Operating with Compressed Xenon and Ar:Xe Mixture	118
§ 3. Ultraviolet High-Pressure Laser Using the Mixture Ar:N ₂	124
Conclusion	127
Appendix	
Theory of Current Flow through an Ionized Gas	128
Literature Cited	142
Experimental Investigation of the Reflection and Absorption of High-Power Radiation in a Laser Plasma	
O. N. Krokhin, G. V. Sklizkov, and A. S. Shikanov	
Chapter I	
Reflection of Laser Radiation from a Plasma (Survey of the Literature)	147

§ 1. Experimental Conditions Realized in Research on Laser-Plasma Parameters	148
§ 2. Energy Composition of the Reflected Radiation; Anomalous Character of the Interaction of Laser Radiation with a Plasma in a Wide Range of Flux Densities	149
§ 3. Spectral Composition of Reflected and Scattered Radiation	156
Chapter II	
Investigation of the Absorption of Laser Radiation in Thin Targets	161
§ 1. Experimental Setup	161
§ 2. Multiframe Schlieren Photography in Ruby-Laser Light; Spatial Resolution	163
§ 3. Determination of the Time of Bleaching of a Thin Target	164
§ 4. Investigation of the Dynamics of Motion of Shock Waves in the Gas Surrounding the Target; Absorbed Energy	167
§ 5. Discussion of Results	169
Chapter III	
Reflection of Laser Radiation from a Dense Plasma.	170
§ 1. Experimental Setup	170
§ 2. Behavior of the Coefficient of Reflection of Laser Radiation from a Plasma in the Flux-Density Interval 10^{10} – 10^{14} W/cm ²	171
§ 3. Dependence of the Reflection Coefficient on the Time; Plasma Probing by Ruby-Laser Radiation	176
§ 4. Oscillations of Reflected Radiation with Time	178
§ 5. Directivity of Reflected Radiation	180
Chapter IV	
Generation of Harmonics of the Heating-Radiation Frequency in a Laser Plasma	182
§ 1. Investigation of the Generation of the Second Harmonic of the Heating Radiation in a Laser Plasma; Dependence on the Flux Density; Variation with Time	182
§ 2. Generation of $3/2\omega_0$ Line	185
Chapter V	
Anisotropy of X Rays from a Laser Plasma	186
§ 1. Procedure of Multichannel Measurement of Continuous X Radiation	186
§ 2. Investigation of the Directivity of the X Rays	187
§ 3. Possibility of Measuring the Electron "Temperature" of a Laser Plasma by the "Absorber" Method	189
Literature Cited	191
Experimental Study of Cumulative Phenomena in a Plasma Focus and in a Laser Plasma	
V. A. Gribkov, O. N. Krokhin, G. V. Sklizkov, N. V. Filippov, and T. I. Filippova	
Introduction	197
Chapter I	
Procedure of High-Speed Interferometric Investigation of a Nonstationary Dense Plasma	198
§ 1. The Maximum Information Obtained by Optical Laser Research Methods	198
§ 2. High-Speed Laser Setup for Interferometric Investigations of a Plasma Focus and Cumulative Laser-Plasma Configurations	199

§ 3. Synchronization Methods	200
§ 4. Discussion of the Applicability of Laser Interferometry and Interpretation of the Interference Patterns	201
Chapter II	
Investigation of Cumulative Stage of Plasma Focus	204
§ 1. Parameters of the "Plasma Focus" Installation.	204
§ 2. Results of Reduction of the Interference Patterns of the First Contraction of the Plasma Focus	204
§ 3. Intermediate Phase	209
§ 4. Second "Contraction" of Plasma Focus	211
§ 5. Concluding Stage	213
Chapter III	
Discussion of Results of Experiments with Plasma Focus	214
§ 1. First "Contraction"	214
§ 2. Intermediate Phase	218
§ 3. Second "Contraction"	221
§ 4. Neutron Emission from Plasma Focus	223
Chapter IV	
Investigations of Cumulative Laser Plasma	224
§ 1. Experimental Setup	225
§ 2. Collision of Two Laser Flares	225
§ 3. Quasi-cylindrical Cumulation of Laser Plasma	226
§ 4. Investigation of X Rays from a Cumulative Laser	229
§ 5. Probe Studies of Laser Plasma	230
Chapter V	
Discussion of Experimental Results	231
§ 1. Collision of Flares	231
§ 2. Cone Cumulation	231
Conclusion	237
Literature Cited	238
