# THEORY OF POLARIZATION AND ABSORPTION IN DIELECTRICS: AN INTRODUCTORY SURVEY

G. WYLLIE, Ph.D., F.Inst.P., F.R.S.E.

*Lecturer in Natural Philosophy, Glasgow University, Glasgow, U.K.*

1. ENERGY IN DIELECTRICS
  - 1.1. The Free Energy of the Field
  - 1.2. Irreversible Changes
2. LINEAR BEHAVIOUR
  - 2.1. Superposition of Response
  - 2.2. Ohmic Conduction
3. SIMPLE MECHANICAL MODELS
  - 3.1. Models for Dielectric Behaviour
  - 3.2. A Newtonian Mechanical Model
  - 3.3. Effect of Anisotropy
4. LESS-SIMPLE MECHANICAL MODELS
  - 4.1. Polarization as Perturbation of Motion
  - 4.2. Static Polarizability of a System of Electrons
5. STATIC MODELS
  - 5.1. Polarization as Perturbation of Thermal Motion
  - 5.2. The Individual Molecule in Thermal Motion
  - 5.3. Interacting Molecules Without Permanent Dipole Moment
6. GENERAL STATISTICAL THEORY
  - 6.1. Thermal Fluctuations of Polarization
  - 6.2. Developments of Onsager's Model
7. THE CRYSTALLINE STATE
  - 7.1. Static Dielectric Constant of Crystals
  - 7.2. Lattice of Permanent Dipoles
  - 7.3. Ionic Crystals
8. MECHANISMS OF DIELECTRIC LOSS
9. SOME RECENT DEVELOPMENTS

# DIELECTRIC PROPERTIES OF POLYMERIC SYSTEMS

A. J. CURTIS, B.A., M.S., Ph.D.

*Dielectrics Section, National Bureau of Standards,  
Washington, D.C., U.S.A.*

## 1. INTRODUCTION

- 1.1. Scope of Review
- 1.2. Polymer Structure
- 1.3. Dielectric and Mechanical Relaxation

## 2. NON-POLAR POLYMERS

- 2.1. Poly(ethylene)
- 2.2. Poly(*isobutylene*) (PIB)
- 2.3. Poly(tetrafluoroethylene) (PTFE)

## 3. DIELECTRIC RELAXATION AND DISPERSION IN POLAR POLYMERS:

### AMORPHOUS MATERIALS

- 3.1. Acrylic Ester Polymers
- 3.2. Poly(vinylacetate)
- 3.3. Poly(vinylethers)
- 3.4. Poly(styrene)
- 3.5. Poly(vinylacetals)
- 3.6. The Reduced Variable Treatment
- 3.7. Natural Rubber and Vulcanizates
- 3.8. Amorphous Polar Polymers: General Conclusions

## 4. DIELECTRIC RELAXATION AND DISPERSION IN POLAR POLYMERS:

### CRYSTALLINE MATERIALS

- 4.1. Crystalline Polar Polymers
- 4.2. Crystalline Polyesters
- 4.3. Crystalline Polyamides
- 4.4. Poly(vinylchloride) (PVC)
- 4.5. Poly(chlorotrifluoroethylene) (PCTFE)

## 5. MIXED SYSTEMS

- 5.1. Plasticizers
- 5.2. Dilute Solutions: Theoretical Developments
- 5.3. Polymer Dipole Moments

# IRRADIATED POLYMERS

ROBERT M. BLACK, M.Sc., Ph.D., A.R.I.C.

*Head of Irradiation Department, Research Organization,  
British Insulated Callender's Cables Limited, London, U.K.*

*and*

ARTHUR CHARLESBY, D.Sc., Ph.D., D.I.C., F.Inst.P.

*Professor of Physics, Royal Military College of Science,  
Shrivenham, U.K.*

1. INTRODUCTION
  - 1.1. Historical
  - 1.2. Temporary and Permanent Changes
2. SOURCES OF HIGH-ENERGY RADIATION
  - 2.1. Nuclear Reactors
  - 2.2. Fission Products and Radioisotopes
  - 2.3. Particle Accelerators
  - 2.4. Units of Radiation Dose
3. MECHANISM OF THE INTERACTION OF RADIATIONS
  - 3.1. Electrons
  - 3.2. Protons
  - 3.3. Fast Neutrons
  - 3.4. Slow Neutrons
  - 3.5. Gamma- and X-rays
4. TEMPORARY RADIATION EFFECTS
  - 4.1. Static and Induced Currents
  - 4.2. The Effect of Radiation Intensity
  - 4.3. The Mechanism of Conduction
  - 4.4. The Semiconductor-like Behaviour of Irradiated Polymers
5. PERMANENT RADIATION EFFECTS
  - 5.1. Chemical Changes Resulting from the Primary Act
  - 5.2. Cross-linking and Degradation
  - 5.3. Unsaturation and Gas Evolution
  - 5.4. The Effect of Temperature
  - 5.5. Permanent Changes in the Electrical Properties
  - 5.6. The Effect of Radiation on the Processes of Electrical Breakdown
  - 5.7. The Effect of Oxygen
6. RECENT DEVELOPMENTS IN THE RADIATION CHEMISTRY OF POLYMERS
  - 6.1. The Mechanism of the Radiation Effects in Polyethylene
  - 6.2. Radiation-induced Polymerization
7. PRACTICAL APPLICATIONS
  - 7.1. The Direct Conversion of Radiation into Electrical Energy
  - 7.2. Improved Temperature Performance of Polyethylene Cable Dielectrics
  - 7.3. Radiation Resistance and Reactor Applications

# THE DIELECTRIC PROPERTIES OF GLASS

PAUL M. SUTTON, M.A., B.Sc., Ph.D.

*Research Associate, Fundamental Physical Research Department,  
Corning Glass Works, Corning, New York, U.S.A.*

## 1. INTRODUCTION TO GLASS

- 1.1. Definitions
- 1.2. Chemical Composition
- 1.3. The Structure of Glasses

## 2. DIRECT CURRENT ELECTRIC FIELDS

- 2.1. Volume Conductivity in Glass
- 2.2. Surface Conductivity of Glass
- 2.3. Dielectric Absorption and Polarization

## 3. PERIODIC ELECTRIC FIELDS

- 3.1. Introduction
- 3.2. Dielectric Constant of Glass
- 3.3. Dielectric Losses in Glass

## 4. OTHER DIELECTRIC PHENOMENA

- 4.1. Dielectric Breakdown Strength
- 4.2. Photoconduction and Photoemission for Glasses
- 4.3. Secondary Emission
- 4.4. Bombardment Phenomena

# HIGH-PERMITTIVITY CERAMICS FOR CAPACITORS

K. W. PLESSNER, Ph.D., A.M.I.E.E.

*Section Leader, British Dielectric Research Ltd, London, U.K.*

*and*

R. WEST, M.A., A.M.I.E.E., A.Inst.P.

*Technical Manager, United Insulator Division,  
Telegraph Condenser Co. Ltd, Chessington, Surrey, U.K.*

1. INTRODUCTION
2. COMPOSITION OF HIGH-PERMITTIVITY CERAMICS
  - 2.1. Permittivity-Temperature Curves
  - 2.2. Power Factor
  - 2.3. Effect of Voltage on Permittivity
  - 2.4. Ageing
  - 2.5. Electric Breakdown Strength
3. THEORY OF CHEMICAL PROCESSES INVOLVED
  - 3.1. Reactions to Produce Barium Titanate
  - 3.2. Reactions between Barium Titanate and Modifying Agents
  - 3.3. Fluxes and Sintering
4. THE MANUFACTURING PROCESS
  - 4.1. Raw Materials
  - 4.2. Mixing
  - 4.3. Calcination and Re-grinding
  - 4.4. Shaping
  - 4.5. Firing
  - 4.6. Silvering
  - 4.7. Potting and Protection
5. OTHER TYPES OF DIELECTRIC CERAMIC

# ARTIFICIAL DIELECTRICS

JOHN BROWN, M.A., Ph.D., A.M.I.E.E., S.M.I.R.E.  
*Reader in Electrical Engineering, University College, London, U.K.*

1. INTRODUCTION
2. TYPES OF ARTIFICIAL DIELECTRIC
3. CALCULATION OF THE REFRACTIVE INDEX BY CLASSICAL THEORY
  - 3.1. The Permittivity
  - 3.2. The Permeability
  - 3.3. The Refractive Index
4. TRANSMISSION-LINE THEORY
5. OTHER METHODS FOR CALCULATING THE REFRACTIVE INDEX
6. THE BEHAVIOUR AT AN INTERFACE BETWEEN FREE SPACE AND AN ARTIFICIAL DIELECTRIC
  - 6.1. The Definition of Wave Impedance
  - 6.2. Reactive Fields at the Interface
  - 6.3. Reflection for Oblique Incidence
7. THE CONSTRUCTION OF ARTIFICIAL DIELECTRICS
8. APPLICATIONS OF ARTIFICIAL DIELECTRICS
