DIELECTRIC WAVEGUIDES AND AERIALS

D. G. KIELY, D.Sci., A.M.I.E.E., A.Inst.P.

Royal Naval Scientific Service

1. INTRODUCTION AND HISTORICAL SURVEY
2. THE DIELECTRIC ROD WAVEGUIDE
 - 2.1. Excitation of Dielectric Rod Waveguides
3. THE DIELECTRIC TUBE WAVEGUIDE
4. THE DIELECTRIC ROD AERIAL
 - 4.1. Derivation of Radiation Pattern Expression: Huyghens Principle Approach
 - 4.2. Derivation of Radiation Pattern Expression: 'Wavelength Lens' Approach
 - 4.3. Derivation of Radiation Pattern Expression: Schelkunoff Equivalence Principle Approach
 - 4.4. Comparison of the Different Approaches
 - 4.5. Further Characteristics of Dielectric Rod Aerials
 - 4.6. Applications of Dielectric Rod Aerials
5. THE DIELECTRIC TUBE AERIAL
 - 5.1. General Principles
 - 5.2. Dielectric Constant and Wall Thickness
 - 5.3. Radiation from the Open End of the Tube
 - 5.4. Description of Apparatus
 - 5.5. Experimental Results
 - 5.6. Further Experimental Characteristics
 - 5.7. Summary
 - 5.8. Mechanism of Radiation

THEORIES OF DIELECTRIC POLARIZATION AND RELAXATION

R. H. COLE, A.B., M.A., Ph.D.

*Professor of Chemistry, Brown University, Providence,
Rhode Island, U.S.A.*

1. MACROSCOPIC AND MICROSCOPIC QUANTITIES
 - 1.1. Microscopic Field and Potential
 - 1.2. Multipole Moments
 - 1.3. Macroscopic Fields and Densities
2. EQUILIBRIUM IN GASES
 - 2.1. Isolated Molecules
 - 2.2. Quantum-mechanical Moments
 - 2.3. The Lorentz Field
 - 2.4. The Clausius-Mossotti Expression
 - 2.5. Classical Fluctuation Effects
 - 2.6. Quantum Fluctuation Effects
 - 2.7. Quadrupole Interaction
 - 2.8. Interactions of Polar Molecules
 - 2.9. Pair Interaction Effects in Other Properties
 - 2.10. Summary
3. EQUILIBRIUM IN LIQUIDS
 - 3.1. The Onsager Model
 - 3.2. The Kirkwood Theory
 - 3.3. Treatment of Induced Polarization
 - 3.4. Dielectric Constants of Solutions
4. EQUILIBRIUM IN SOLIDS
 - 4.1. Ionic Crystals
 - 4.2. Molecular Solids
 - 4.3. Dipole Interaction in Solids
5. RELAXATION PROBLEMS
 - 5.1. Macroscopic Relations
 - 5.2. Debye Type Relaxation
 - 5.3. Other Relaxation Functions

6. RELAXATION IN GASES

- 6.1. Collision Models
- 6.2. Non-resonant Absorption
- 6.3. Transition Probabilities
- 6.4. The Local Field Problem

7. RELAXATION IN LIQUIDS AND SOLUTIONS

- 7.1. The Debye Model
- 7.2. Molecular and Macroscopic Relaxation Times
- 7.3. Molecular Friction and Viscosity
- 7.4. Origins of Multiple Absorption Regions
- 7.5. Broad Absorption Regions

8. RELAXATION IN SOLIDS

- 8.1. Two-position Barrier Models
- 8.2. Several-position Barrier Models
- 8.3. Ice and Hydrogen Halides

THE DIELECTRIC PROPERTIES OF WATER

J. B. HASTED, M.A., D.Phil.

*Department of Physics, University
College, London, U.K.*

1. INDIVIDUAL MOLECULES

- 1.1. Electric Moments and Models of the Water Molecule
- 1.2. Quantum Theory Calculations of the Electric Moments

2. ICE

- 2.1. The Dielectric Properties of Ice
- 2.2. Crystal Structure and Dielectric Theory of Ice
- 2.3. Solutions in Ice
- 2.4. The Complex Conductivity of Ice

3. WATER

- 3.1. Low Frequency Experiments
- 3.2. Microwave Techniques
- 3.3. The Relaxation Data for Water
- 3.4. Theory of the Static Dielectric Constant of Water
- 3.5. Interpretation of the Water Relaxation Data

4. ELECTROLYTIC SOLUTIONS

- 4.1. The Dielectric Properties of Electrolytic Solutions

5. BOUND WATER

- 5.1. The Dielectric Properties of Bound Water
- 5.2. Estimation of Irrotationally Bound Water by Measurements in the Microwave Region
- 5.3. The Relaxation Times of Bound Water
- 5.4. Water of Crystallization
- 5.5. Discontinuities at Freezing Point
- 5.6. Maxwell-Wagner Effect
- 5.7. Single Relaxation Times in Aqueous Mixtures

6. CONCLUSIONS

MECHANISMS OF DIELECTRIC ABSORPTION IN SOLIDS

R. J. MEAKINS, B.Sc.(Syd.), Ph.D.(Lond.), D.I.C., F.R.I.C.

*Principal Research Officer, C.S.I.R.O., Division of Electrotechnology,
National Standards Laboratory, Sydney University Grounds,
Chippendale, N.S.W., Australia*

1. INTRODUCTION AND THEORY

- 1.1. Polarization
- 1.2. Frequency Dependence of the Polarization
- 1.3. The Scope of Dielectric Studies
- 1.4. Dielectric Loss Factor and Relative Permittivity
- 1.5. The Debye Equations
- 1.6. Range of Relaxation Times
- 1.7. Models for Dielectric Absorption

2. METHODS OF MEASUREMENT

3. INTERFACIAL POLARIZATION

- 3.1. Low Concentrations of Conducting Inclusions
- 3.2. High Concentrations of Conducting Inclusions

4. DIELECTRIC ABSORPTION IN INORGANIC COMPOUNDS

- 4.1. Alkali Halides
- 4.2. Other Ionic Solids
- 4.3. Hydrogen and Deuterium Halides
- 4.4. Ice
- 4.5. Hydrates

5. ORGANIC COMPOUNDS

- 5.1. Aliphatic Long-chain Compounds
- 5.2. Solid Solutions of Polar Aliphatic Long-chain Compounds in Hydrocarbons
- 5.3. Radiofrequency Absorption Due to Molecular Rotation in β -phase Long-chain Compounds
- 5.4. Microwave Absorption in β -phase Long-chain Compounds
- 5.5. Long-chain Compounds in the α -phase
- 5.6. Aliphatic Long-chain Alcohols

- 5.7. Alicyclic Compounds
- 5.8. Phenols with Intramolecular Hydrogen Bonding
- 5.9. Hydroxy Compounds Without Hydrogen Bonding
- 5.10. Aromatic Compounds With Molecular Rotation
- 5.11. Occlusion Compounds

6. MISCELLANEOUS

- 6.1. Glasses
- 6.2. Polymers
- 6.3. Ferroelectric Compounds

APPENDIX

RECENT DEVELOPMENTS IN CABLE INSULATION IN THE UNITED STATES

C. W. HAMILTON, B.S., M.S.

*Assistant Chief, Rubber and Plastics Division,
Battelle Memorial Institute, Columbus, Ohio, U.S.A.*

1. INTRODUCTION
2. POLYETHYLENE
 - 2.1. Historical
 - 2.2. Types of Polyethylene
 - 2.3. High Density Polyethylene
 - 2.4. Chemically Cross-linked Polyethylene
 - 2.5. Flame-retardant Polyethylene
3. FLUOROCARBONS
4. BUTYL RUBBER
 - 4.1. Historical
 - 4.2. Recent Advances in Butyl Rubber Insulation
5. SILICONE RUBBER
6. RADIATION PROCESSING OF WIRE INSULATION
7. RADIATION EFFECTS ON WIRE AND CABLE INSULATION
8. NEW POLYMERS
 - 8.1. Polypropylene
 - 8.2. Polyethylene Copolymers
9. FUNDAMENTAL RESEARCH
10. FUTURE TRENDS
11. CONCLUSION

THE THEORY OF DIELECTRIC BREAKDOWN IN SOLIDS

R. STRATTON, Ph.D., A.Inst.P.

Central Research Laboratories, Texas Instruments Inc., Dallas, Texas, U.S.A.

1. INTRODUCTION
2. THERMAL BREAKDOWN
3. ELEMENTARY DESCRIPTION OF INTRINSIC BREAKDOWN
 - 3.1. Behaviour of a Single Electron in the Conduction Band. von Hippel's Low Energy Criterion
 - 3.2. Collective Breakdown in Perfect Crystals and Hot Electron Effect
 - 3.3. Collective Breakdown in Impure Solids
 - 3.4. Fröhlich's High Energy Criterion
 - 3.5. Avalanche Breakdown Initiated by Single Electrons
 - 3.6. Avalanche Multiplication Breakdown
 - 3.7. Field Emission Breakdown
4. INTRINSIC BREAKDOWN THEORIES
 - 4.1. Boltzmann's Kinetic Equation
 - 4.2. Collective Breakdown in Perfect Crystals and Hot Electron Effect
 - 4.3. Collective Breakdown in Impure Solids
 - 4.4. von Hippel's Low Energy Criterion
 - 4.5. Fröhlich's High Energy Criterion
 - 4.6. Avalanche Breakdown Initiated by a Single Electron
 - 4.7. Avalanche Multiplication Breakdown
5. INTRINSIC BREAKDOWN EXPERIMENTAL RESULTS
6. CONCLUSIONS

APPENDIXES
