MICROWAVE SPECTROSCOPY OF GASES

J. SHERIDAN, M.A., D.Phil., D.Sc.

*Senior Lecturer in Chemistry, The University of Birmingham,
Birmingham, U.K.*

1. INTRODUCTION
2. THE PRESENT STATUS OF EXPERIMENTAL METHODS
 - 2.1. Basic Components of a Spectrometer
 - 2.2. Radiation Sources
 - 2.3. Waveguide Components
 - 2.4. Absorption Cells
 - 2.5. Detectors
 - 2.6. Modulators and Signal Amplifiers
 - 2.7. Frequency Measurement
 - 2.8. Intensity and Line Shape Measurement
 - 2.9. Resolving Powers and Sensitivities
 - 2.10. Molecular Beam Maser Spectrometers
3. ANALYSIS OF SPECTRA
 - 3.1. Types of Quantized Phenomena
 - 3.2. General Aspects of Intensities and Widths of Lines
 - 3.3. Rotation Spectra of Polar Molecules
 - 3.4. Other Types of Microwave Spectra
 - 3.5. Nuclear Quadrupole Hyperfine Structure
 - 3.6. Other Fine Structures
 - 3.7. Stark Effects
 - 3.8. Zeeman Effects
4. DERIVED MOLECULAR AND NUCLEAR INFORMATION
 - 4.1. Molecular Configurations and Symmetries
 - 4.2. Internuclear Distances in Polyatomic Molecules
 - 4.3. Nuclear Quadrupole Coupling and Chemical Bonding
 - 4.4. Magnitude and Direction of Molecular Electric Dipole Moments
 - 4.5. Other Information on Electron Distribution
 - 4.6. Information Related to Molecular Force Fields
 - 4.7. Nuclear Information
5. MICROWAVE SPECTRA FOR ISOTOPIC AND CHEMICAL ANALYSIS
6. SUMMARY

DISPERSION AND ABSORPTION OF MICROWAVES IN GASES AND LIQUIDS

K. H. ILLINGER, A.B., A.M., Ph.D.

*Research Associate, Frick Chemical Laboratory, Princeton University, Princeton,
N.J., U.S.A.*

1. INTRODUCTION

2. MOLECULAR MECHANISMS OF DIELECTRIC POLARIZATION

2.1. The Isolated Molecule

2.2. The Molecule in the Intermolecular Force Field

3. THE TRANSITION FROM RESONANT TO NON-RESONANT ABSORPTION IN GASES

3.1. The Region of Very Low Pressures

3.2. Pressure Broadening

3.3. The Region of Low Pressures

3.4. The Region of Intermediate and High Pressures

3.5. Conclusions

4. THE LIQUID STATE

4.1. Macroscopic Decay Time and Molecular Relaxation Time

4.2. Rigid Absorbing Molecules

4.3. Non-rigid Absorbing Molecules

4.4. Associated Liquids

4.5. Dispersion at Audiofrequencies and Radiofrequencies

4.6. Mixtures of Polar Molecules

4.7. Dispersion at Millimetre Wavelengths

4.8. Resonance Absorption

5. RELATED EFFECTS INVOLVING ROTATIONAL RELAXATION

5.1. Structure of the Scattered Rayleigh Line

5.2. Nuclear Spin-Lattice Relaxation

5.3. Ultrasonic Relaxation

FERROELECTRICITY

W. J. MERZ, Ph.D.

Laboratories RCA Ltd, Zürich, Switzerland

1. INTRODUCTION

2. FERROELECTRIC MATERIALS

3. GENERAL PROPERTIES OF FERROELECTRICS

- 3.1. Type of Bonds in Soft Ferroelectrics
- 3.2. Type of Bonds in Hard Ferroelectrics
- 3.3. Structure and Structure Changes
- 3.4. Ferroelectric Domains
- 3.5. Dielectric Behaviour
- 3.6. Piezoelectric and Pyroelectric Behaviour
- 3.7. Optical Behaviour

4. RECENT INVESTIGATIONS AND RESULTS

- 4.1. New Materials
- 4.2. Infra-red Absorption
- 4.3. Resonance Experiments
- 4.4. Microwave Properties
- 4.5. Domain Formation and Domain Wall Motion
- 4.6. Dielectric Constant during Switching
- 4.7. Radiation Damage
- 4.8. Bias and Pyroeffect
- 4.9. Space Charge and Surface Effects

5. CONCLUSIONS

APPENDIX: TABLE OF FERROELECTRIC MATERIALS

THEORY OF GAS BREAKDOWN

T. W. DAKIN, B.S., M.S., Ph.D.

*Manager, Physics of Insulation Section, Westinghouse Central Laboratory,
Pittsburgh, Pa., U.S.A.*

and

D. BERG, B.S., M.S., Ph.D.

*Manager, Physical and Inorganic Chemistry Section, Westinghouse Central
Laboratory, Pittsburgh, Pa., U.S.A.*

1. INTRODUCTION

2. BASIC PROCESSES IN GAS BREAKDOWN

- 2.1. Impact Ionization
- 2.2. Electron Capture and Negative Ion Formation
- 2.3. Photoionization
- 2.4. Cathode Processes

3. BREAKDOWN IN UNIFORM FIELDS

- 3.1. Townsend Mechanism
- 3.2. Townsend Mechanism Modified by Negative Ion Formation
- 3.3. Townsend Breakdown and Molecular Structure
- 3.4. Transition to Non-uniform Field by Space Charge Formation
- 3.5. Cathode Emission Effects on Breakdown and Deviations from Paschen's Law
- 3.6. The Principle of Similarity of Discharges

4. BREAKDOWN IN NON-UNIFORM FIELDS

- 4.1. Streamer Mechanisms
- 4.2. Negative Point Discharges
- 4.3. Positive Point Discharges
- 4.4. Breakdown Limited by Solid or Liquid Insulation

5. TIME LAGS IN GASEOUS BREAKDOWN

- 5.1. Statistical Time Lags
- 5.2. Formative Time Lags
- 5.3. Non-uniform Fields
- 5.4. High Frequency Breakdown

6. CONCLUSION

CONDUCTION AND BREAKDOWN IN LIQUID DIELECTRICS

A. H. SHARBAUGH, A.B., Ph.D.

and

P. K. WATSON, B.Sc., Ph.D.

*Chemistry Research Department, General Electric Research Laboratory,
Schenectady, N. Y., U.S.A.*

1. INTRODUCTION
2. LOW FIELD CONDUCTION
3. HIGH FIELD CONDUCTION
 - 3.1. Theories of Conduction
 - 3.2. D.C. Conduction Studies
 - 3.3. Pulse Conduction Studies
4. ELECTRICAL BREAKDOWN MEASUREMENTS
 - 4.1. Pure Organic Liquids
 - 4.2. Liquefied Gases and High Density Vapour
 - 4.3. Commercial Liquids
5. MISCELLANEOUS HIGH FIELD PHENOMENA
 - 5.1. Light Emission and Gas Evolution from Liquids under Electric Stress
 - 5.2. Optical Studies of High Field Phenomena in Liquids
6. MECHANISMS OF ELECTRIC BREAKDOWN
 - 6.1. The Electronic Theory of Breakdown in Liquids
 - 6.2. Cavitation Theories of Breakdown
 - 6.3. Suspended Particle Theory

STATIC ELECTRIFICATION—I

L. B. LOEB, Ph.D.

*Emeritus Professor of Physics, University of California,
Berkeley, California, U.S.A.*

1. GENERAL INTRODUCTION AND DEFINITION
2. SEGREGATION OF CHARGES IN THE LIGHT OF ATOMIC STRUCTURE
3. STATES OF AGGREGATION
 - 3.1. Solids
 - 3.2. Liquids
 - 3.3. Gases
4. CHARGE TRANSFER
5. THE NATURE OF SURFACES
 - 5.1. The Surfaces of Solids
 - 5.2. The Surfaces of Liquids
 - 5.3. Electrification and Mechanical Rupture
6. BACK DISCHARGE
7. MANIFESTATIONS OF STATIC CHARGING AND CHARGE COLLECTION
8. TYPES OF STATIC ELECTRIFICATION
 - 8.1. Electrolytic Action
 - 8.2. Spray Electrification
 - 8.3. Homogeneous Charge Generation
 - 8.4. Contact Electrification
 - 8.5. Surface Cleanliness
 - 8.6. Gas Ion-Surface Charge Exchange
 - 8.7. Contact Potential Charging
 - 8.8. Binding Forces and Work to Remove Electrons
 - 8.9. Contact Potentials and Modification by Adsorbed Ions
 - 8.10. Thermionic Emission
 - 8.11. The Photoelectric Effect
 - 8.12. Work Function from Calorimetric Studies
 - 8.13. Contact Potential Difference and Static Electrification
 - 8.14. Measurement of Contact Potential

9. CHARGING BY FLOW OF LIQUIDS, STREAMING POTENTIALS, ELECTRICAL ENDOSMOSIS, AND ELECTROPHORESIS
 - 9.1. Simple Theory of the Double Layer and Electrokinetic Potential
 - 9.2. Modification by Ionic Segregation; the Debye-Hückel Theory
 - 9.3. The Workman-Reynolds Freezing Potentials

10. SPRAY ELECTRIFICATION (THE GAS-LIQUID INTERFACE)
 - 10.1. Lenard's Studies
 - 10.2. Büsse's Studies
 - 10.3. Chapman's Erikson Mobility Tube Studies
 - 10.4. Asymmetric Charging of Micron-size Droplets from the Bursting of Small Air Bubbles in Sea Water

11. GAS BUBBLE ELECTROPHORESIS AND THE TRUE NATURE OF THE ELECTRICAL DOUBLE LAYER AT GAS-LIQUID (WATER) INTERFACES
 - 11.1. The Double Layer and Dielectric Constant
 - 11.2. Electrophoresis of Gas Bubbles and the Nature of the Double Layer in Water
 - 11.3. Potential Across the Gas-Water Interface
 - 11.4. The Effect of Dissolved Substances on Potentials of the Gas-Solution Interface

Part II of this article will be published in a future volume of *Progress in Dielectrics*
