THEORIES OF DIELECTRIC LOSS

J. J. O'DWYER†, B.Sc., B.E., Ph.D.

Westinghouse Research Laboratories, Pittsburgh, U.S.A.

and

E. HARTING, A.S.T.C., B.Sc.

School of Physics, University of New South Wales, Kensington, Australia

1.1. INTRODUCTION

- 1.1.1. Response Functions
- 1.1.2. The Debye Equations
- 1.1.3. Resonance Absorption

1.2. BROWNIAN MOVEMENT

1.3. STRONG COLLISIONS

- 1.3.1. 'Large' Collisions
- 1.3.2. 'Very large' Collisions
- 1.3.3. Collision strength intermediate between Brownian movement and 'large'

1.4. MODELS OF DIPOLE-RELAXATION

- 1.4.1. Models leading to the Debye Equations
- 1.4.2. Electrical Interaction between Dipoles
- 1.4.3. Inertial Effects
- 1.4.4. Multi-site Models of Dipole-relaxation in Solids

1.5. QUANTUM MECHANICAL THEORY OF STRONG COLLISIONS

1.6. QUANTUM MECHANICAL THEORY OF WEAK COLLISIONS

1.7. THE KUBO FORMULA

1.8. QUANTUM MECHANICAL MODELS

†Present address: Physics Department, South Illinois University, U.S.A.

CAPACITANCE MEASUREMENTS AT THE NATIONAL RESEARCH COUNCIL OF CANADA

A. F. DUNN, Ph. D., M.I.E.E.E.

*Division of Applied Physics,
National Research Council,
Ottawa, Canada*

2.1. SUMMARY

2.2. INTRODUCTION

- 2.2.1. Standards of Capacitance
- 2.2.2. Measurement Bridges
- 2.2.3. 10/1 Ratio of Capacitance
- 2.2.4. Basic Unit for the Scale of Capacitance
- 2.2.5. Computable Capacitor
- 2.2.6. Capacitance Measurements
- 2.2.7. Scale of Capacitance
- 2.2.8. Comparison of Capacitance Units

2.3. DIELECTRIC CONSTANT MEASUREMENT

- 2.3.1. Theory
- 2.3.2. Procedure
- 2.3.3. Results
- 2.3.4. Comparison of Results

DIELECTRIC BEHAVIOUR OF HETEROGENEOUS SYSTEMS

L. K. H. van BEEK†, Ph. D.

Central Laboratory, TNO, Delft, Netherlands

3.1. INTRODUCTION

3.2. DIELECTRIC LOSS IN HETEROGENEOUS SYSTEMS

3.2.1. Introductory Remarks

3.2.2. The Two-layer System

3.2.3. Systems Containing Dispersed Spheres

3.2.4. Systems Containing Dispersed Spheroids

3.2.5. Porous Dielectrics

3.2.6. Interaction and Size Effects

3.2.7. Colloidal Solutions

3.2.8. Dielectric Loss in One Component of a System

3.3. PERMITTIVITIES OF HETEROGENEOUS SYSTEMS

3.3.1. Introduction

3.3.2. Systems Containing Dispersed Ellipsoids; General Theory

3.3.3. Derived Equations for Dispersed Spheres

3.3.4. Equations for Conducting Spheres

3.3.5. Equations for Dispersed Cylinders or Rods

3.3.6. Equations for Dispersed Lamellae

3.3.7. Equations for Conducting Ellipsoids

3.4. SUMMARY OF FORMULAE

†Present address: Philips' Research Laboratories, N.V. Philips' Gloeilampenfabriken, Eindhoven, Netherlands

CONDUCTION AND BREAKDOWN IN HIGH VACUUM

R. HAWLEY, B. Sc., Ph. D., C. Eng., M.I.E.E., A. Inst. P.

*Deputy Chief Generator Engineer
C. A. Parsons and Co. Ltd.,
Newcastle on Tyne, U.K.*

and

A. A. ZAKY, B. Sc., M. S., Ph. D., C. Eng., M.I.E.E., A. Inst. P.

*Assistant Professor of Electrical Engineering
Alexandria University, U.A.R.*

4.1. INTRODUCTION

4.2. PREBREAKDOWN CONDUCTION PHENOMENA

4.2.1. Electron emission currents

Classical mechanisms of electron emission from metallic surfaces

Thermionic emission

Schottky emission

Field emission

Enhancement of the field

Measurement of emission currents at high and low applied fields

At high fields

At low fields

Theoretical explanation of electron emission at low applied fields

The effect of oxide films

Patch fields

Particles on the surface

Hot spots

Temperature-corrected field emission

Microprojections

Thermionic emission of ions

4.2.2. Microdischarges

Microdischarge initiation mechanisms

- 4.3. FACTORS AFFECTING THE BREAKDOWN VOLTAGE IN HIGH VACUUM
 - 4.3.1. Electrode separation
 - 4.3.2. Electrode effects
 - Conditioning
 - Material and surface finish
 - Surface contamination
 - Surface coatings
 - Area
 - Configuration
 - Temperature
 - 4.3.3. Pressure effects
 - 4.3.4. Voltage effects
 - Frequency
 - Rate of rise of voltage
 - 4.3.5. Time lags
 - 4.3.6. Effect of a magnetic field in the gap
 - 4.3.7. Effect of the external circuit
 - 4.3.8. Recovery of the insulating property of a vacuum gap after a breakdown
- 4.4. VACUUM BREAKDOWN HYPOTHESES
 - 4.4.1. Particle exchange hypotheses
 - Positive ion hypothesis
 - Positive ion-negative ion hypothesis
 - Thermionic emission hypothesis
 - 4.4.2. Electron beam hypotheses
 - Anode heating
 - Cathode heating
 - 4.4.3. Clump hypothesis
 - Theoretical studies of the clump mechanism
 - Observations of clumps
 - Deliberate introduction of clumps into a vacuum gap
 - Origin of clumps
 - 4.4.4. Transition in the breakdown mechanism
- 4.5. VACUUM BREAKDOWN CRITERIA
 - 4.5.1. Kilpatrick criterion
 - 4.5.2. Values of α predicted by various breakdown criteria
- 4.6. BREAKDOWN ACROSS SOLID INSULATORS IN VACUUM
- 4.7. SUMMARY

THE QUANTUM EFFICIENCY OF LUMINESCENCE

F. R. LIPSETT, Ph.D.

National Research Council, Ottawa, Canada

5.1. INTRODUCTION

ELEMENTAL SPECIMENS

5.2. DEFINITIONS OF THE QUANTUM EFFICIENCY OF LUMINESCENCE

- 5.2.1. Pringsheim
- 5.2.2. Leverenz
- 5.2.3. Gurney and Mott
- 5.2.4. Becker and Kasha
- 5.2.5. Time constants
- 5.2.6. Photochemistry
- 5.2.7. Levshin's definitions
- 5.2.8. Definition in terms of transition probabilities or rate constants
- 5.2.9. Multi-component systems
- 5.2.10. Remarks

5.3. THE DECAY OF LUMINESCENCE

- 5.3.1. Exponential decay
- 5.3.2. Exponential decay—alternative definitions
- 5.3.3. Non-exponential decay

5.4. RELATIONS BETWEEN THE QUANTUM EFFICIENCY, ABSORPTION SPECTRA, AND DECAY TIMES

- 5.4.1. Ladenburg's formula
- 5.4.2. Effect of temperature on Q and τ
- 5.4.3. Relation between Q_p and τ_p
- 5.4.4. Relations for delayed fluorescence
- 5.4.5. A general equation

5.5. VAVILOV'S, STEPANOV'S AND ALENTSEV'S RELATIONS

- 5.5.1. Vavilov's law (constant quantum efficiency)
- 5.5.2. Vavilov's law and the excitation spectrum

- 5.5.3. Stepanov's universal relation
- 5.5.4. Alentsev's formula

REAL SPECIMENS

5.6. THEORY OF ABSORPTION AND FLUORESCENCE

- 5.6.1. Absorption
- 5.6.2. Förster's theory—practical formulae for the quantum efficiency
- 5.6.3. Phosphorescence

5.7. SECONDARY PROCESSES

- 5.7.1. Scattering
- 5.7.2. Reabsorption
- 5.7.3. Secondary fluorescence
- 5.7.4. Effect on decay time
- 5.7.5. Effect on polarization

5.8. EFFECT OF REFRACTION

5.9. POLARIZATION

- 5.9.1. General
- 5.9.2. Relation between polarization and quantum efficiency
- 5.9.3. Relations between polarization, secondary fluorescence, fluorescence decay time, and phosphorescence
- 5.9.4. Use of hemispherical specimens

5.10. ANGULAR DISTRIBUTION OF INTENSITY OF FLUORESCENCE

5.11. EFFECT OF SPECIMEN SIZE

- 5.11.1. Absorption and reflection of powdered specimens
- 5.11.2. Effect on luminescence intensity and quantum efficiency
- 5.11.3. Effect on angular distribution and decay time
- 5.11.4. Use of microscopic techniques and the effects of convergent light
- 5.11.5. Determination of specimen thickness
- 5.11.6. Energy transfer in very thin specimens

5.12. EXPERIMENTAL METHODS FOR DETERMINING THE QUANTUM EFFICIENCY

- 5.12.1. Measurement of excitation and luminescence intensities
- 5.12.2. Calorimetry
- 5.12.3. Time constants
- 5.12.4. Polarization and scattering
- 5.12.5. Comparison with materials of known quantum efficiency

ENERGY TRANSFER IN POLYACENE SOLID SOLUTIONS V: A BIBLIOGRAPHY FOR 1964

F.R. LIPSETT, Ph.D.

National Research Council Ottawa, Canada

6.1. INTRODUCTION

6.2. BOOKS AND REPORTS OF MEETINGS

6.3. THEORIES OF SPECTRA

- 6.3.1. Review Papers and Quantum Theory
- 6.3.2. Conduction, Ionization and Phosphorescence
- 6.3.3. Naphthalene, Anthracene and Related Molecules

6.4. EXPERIMENTS ON SPECTRA

- 6.4.1. Naphthalene and Anthracene
- 6.4.2. Naphthalene, Anthracene and Related Compounds
- 6.4.3. Phosphorescence, Triplet States and Delayed Fluorescence
- 6.4.4. Size and Pressure Effects, Excitation Spectra, and Quantum Yields
- 6.4.5. Stimulated Emission and Multi-Photon Processes

6.5. ENERGY TRANSFER

- 6.5.1. Theory
- 6.5.2. Exciton Theory
- 6.5.3. Experiments on Solids
- 6.5.4. Experiments on Liquid Solutions and Quenching

6.6. RELATED SUBJECTS

- 6.6.1. Molecular Structure
- 6.6.2. Time Constants
- 6.6.3. Response to High-Energy Particles
- 6.6.4. Photo- and Semi-Conductance
- 6.6.5. Physical and Chemical Properties and Reactions
- 6.6.6. Magnetic Susceptibility and Resonance
- 6.6.7. Miscellaneous

6.7. EXPERIMENTAL TECHNIQUES

6.7.1. Absorption, Fluorescence and Quantum Efficiency Measurements

6.7.2. Time Constant Measurements

6.7.3. Crystal Growth

6.8. AUTHOR INDEX
