Department of Physics, University College, London	

# ENERGY MEASUREMENTS WITH PROPORTIONAL COUNTERS

*D. West*

	PAGE
I. Introduction . . . . .	18
II. The multiplication process . . . . .	19
(a) General . . . . .	19
(b) Pulse shape . . . . .	21
(c) Proportionality . . . . .	23
(d) Energy resolution . . . . .	25
III. Measurement of pulse size . . . . .	29
IV. Energy calibration . . . . .	29
V. Mean energy to produce an ion pair . . . . .	33
VI. Measurement of $\beta$ -ray spectra . . . . .	35
(a) Gaseous sources . . . . .	35
(b) Solid sources . . . . .	39
VII. Measurement of line spectra . . . . .	41
(a) Pulse size distributions from X- or $\gamma$ -radiations . . . . .	41
(b) Efficiency of detection of quanta . . . . .	44
(c) Applications . . . . .	47
VIII. Extension of the technique to the study of higher energy radiations . . . . .	51
IX. Measurement of neutron spectra . . . . .	55
X. Measurement of specific ionization. . . . .	57

# ČERENKOV RADIATION

*J. V. Jelley*

	PAGE
I. Introduction . . . . .	84
(a) ČERENKOV'S original discovery . . . . .	84
(b) Descriptive explanation of the phenomenon . . . . .	86
(c) Survey of further early Russian work . . . . .	88
(i) The spectrum of the radiation . . . . .	90
(ii) The absolute intensity of the radiation . . . . .	90
(iii) The dependence of $\theta$ on $n$ and $\beta$ . . . . .	91
II. Theoretical interpretation . . . . .	92
(a) The theory of FRANK and TAMM . . . . .	92
(b) Extension of the elementary theory . . . . .	95
(c) Quantum treatment of the effect, and "magnetic" Čerenkov radiation . . . . .	99
(d) A charged particle moving <i>in vacuo</i> close to a dielectric surface; a possible source of microwaves . . . . .	100
III. Later experimental work . . . . .	102
(a) Experiments with artificially accelerated particles . . . . .	102
(b) Čerenkov radiation from cosmic-ray particles; the detection of individual $\mu$ -mesons . . . . .	104
(c) Radiation from aqueous solutions of radioactive isotopes . . . . .	109
(d) Čerenkov radiation in the atmosphere . . . . .	112
IV. Practical applications of Čerenkov detectors . . . . .	113
(a) General considerations . . . . .	113
(b) The photomultiplier . . . . .	114
(c) Counters with focusing properties . . . . .	116
(d) A photographic instrument of high precision . . . . .	120
(e) A proton selector . . . . .	124
(f) The cosmic-ray albedo . . . . .	126
V. Conclusions . . . . .	128

## STRIPPING REACTIONS

*R. Huby*

	PAGE
I. Descriptive survey . . . . .	177
(a) Without resolution of individual energy groups of emitted particles	177
(b) With resolution of individual energy groups of emitted particles .	184
II. High energy deuteron stripping . . . . .	190
III. Angular distributions at intermediate energies . . . . .	194
(a) Theory . . . . .	194
(b) Experiment . . . . .	199
(c) Stripping and nuclear structure . . . . .	207
IV. Miscellaneous considerations . . . . .	211

# THE PRODUCTION OF INTENSE ION BEAMS

*P. C. Thonemann*

	PAGE
I. Introduction . . . . .	219
II. The properties of a plasma . . . . .	220
III. Methods of producing a plasma . . . . .	222
IV. Collision processes. . . . .	225
V. Extraction and focusing of ions from a plasma . . . . .	228
VI. Conclusion . . . . .	232
VII. Bibliography . . . . .	232
