ISOTOPE SEPARATION BY MULTISTAGE METHODS

T. F. Johns

CONTENTS

	PAGE
1. INTRODUCTION	1
2. METHODS EMPLOYED	2
2.1 Electrolytic methods	2
2.2 Distillation	5
2.3 Chemical exchange methods	8
2.4 Separation by diffusion	13
2.5 Thermal diffusion	14
2.6 Other methods of separation	15
2.7 Laboratory-scale separation of isotopes	16
3. METHODS OF ISOTOPIC ANALYSIS	18
4. GENERAL REMARKS ON THE DESIGN OF ISOTOPE-SEPARATION PLANTS	18
5. COMPARISON OF THE DIFFERENT SEPARATION METHODS	21
6. ISOTOPE WHICH HAVE BEEN SEPARATED	22
7. SEPARATION OF OTHER ISOTOPE	22
REFERENCES	23

NUCLEAR MOMENTS AND SPINS

K. F. Smith

CONTENTS

	PAGE
1. INTRODUCTION	53
2. NUCLEAR INTERACTIONS IN ATOMS AND MOLECULES	54
2.1 Spin and statistics	54
2.2 Generalized nuclear moments	54
(a) Restrictions on multipole moments	55
(b) Restrictions on multipole interactions	56
2.3 Electric moments and interactions	56
(a) Electric quadrupole moment	56
(b) Electric quadrupole interactions	57
(c) Shielding of the quadrupole interaction	58
(d) Mixing of states	58
2.4 Magnetic moments and interactions	58
(a) Magnetic dipole moment	59
(b) Magnetic dipole interactions	59
(c) Interval rule	60
(d) Magnetic octupole interaction	60
2.5 External magnetic fields	61
(a) Weak fields	61
(b) Strong fields	61
(c) Intermediate fields	61
3. MOMENTS AND SPINS OF NUCLEAR GROUND STATES	62
3.1 Optical hyperfine structure	62
(a) Spin	64
(b) Moments	64
(c) Isotope shifts	64
3.2 Optical double resonance	65
(a) Coincidence techniques	66
3.3 Band spectra	67
3.4 Deflection of molecular beams	67
(a) Deflection of molecules	68
(b) Deflection of atoms	68
(c) Zero-moment technique	69
3.5 Molecular-beam magnetic resonance	70
(a) Line-width	71
(b) Molecular spectra	73
(c) Atomic spectra	73
(d) Excited atomic states	75
(e) Electric resonance	75
(f) Neutron moment	75

INTRODUCTION

3.6 Radio-frequency spectroscopy	76
(a) Signal to noise ratio	77
(b) Magnetic shielding and chemical shifts	78
(c) Proton moment	78
(d) Quadrupole resonances	78
3.7 Microwave spectroscopy	79
(a) Molecular spectra	79
(b) Paramagnetic resonance	79
4. MOMENTS AND SPINS OF NUCLEAR EXCITED STATES	87
4.1 Spins and parities of excited states	87
(a) Gamma decay	88
(b) Internal conversion	88
(c) Beta decay	89
(d) Nuclear reactions	89
(e) Stripping process	90
4.2 Nuclear moments of excited states	90
(a) Magnetic moments	90
(b) Quadrupole interactions	92
(c) Oriented nuclei	92
5. THEORIES OF NUCLEAR MOMENTS AND SPINS	93
5.1 Moments of very light nuclei	94
(a) Moments of H^2	94
(b) Moments of H^3 and He^3	94
5.2 Magnetic moments	94
(a) Single-particle model	94
(b) Individual-particle model	96
(c) Mixing of states and intermediate coupling	96
(d) Collective model	97
(e) Magnetic octupole moments	98
5.3 Electric quadrupole moments	98
5.4 Odd-odd nuclei	99
5.5 Hyperfine structure anomaly	100

THE SPECTROSCOPY OF MESONIC ATOMS

Mary Beth Stearns

CONTENTS

	PAGE
1. INTRODUCTION	108
2. THEORETICAL CONSIDERATIONS OF VARIOUS EFFECTS	110
2.1. The cascade process. (Radiative vs. Auger transitions)	110
2.2. Capture in chemical compounds	110
2.3. Finite size of the nucleus	111
2.4. Spin-orbit coupling for μ Mesons	111
2.5. Radiative effects. (Vacuum polarization)	112
2.6. Static quadrupole moment of the nucleus	113
2.7. Polarization of the nucleus	113
2.8. Nuclear absorption of π Mesons	114
2.9. Energy shifts due to π -Meson—nucleon interactions	114
3. EXPERIMENTAL RESULTS	115
3.1. Auger effect and the cascade process	117
3.2. Capture in chemical compounds	120
3.3. Finite size of nuclei from μ -Mesonic X rays	121
3.4. Spin of the μ Meson	122
3.5. Masses of the π^- and μ^- Mesons	123
3.6. Nuclear absorption from π -Mesonic atoms	125
(a) π -K series X rays	125
(b) π -L series X rays	127
(c) π -M series X rays	130
3.7. Energies of π -Mesonic X rays	130
4. POSSIBLE FUTURE EXPERIMENTS	135
REFERENCES	136

MASSES OF ATOMS OF $A > 40^*$ *Henry E. Duckworth*

CONTENTS

	PAGE
1. INTRODUCTION	138
2. SOURCES OF ATOMIC MASS INFORMATION	139
2.1 Mass spectroscopic atomic mass difference	139
(a) The mass spectroscopic method for determining atomic masses	139
(b) Precision of doublet mass comparisons	140
(c) Existing atomic mass information	141
2.2 Determination of the energy balance in nuclear reactions	145
2.3 Total beta-disintegration energies	146
2.4 Determination of atomic masses by microwave spectroscopy	146
2.5 Alpha-disintegration energies	146
3. STANDARDS OF ATOMIC MASS AMONG THE HEAVIER ATOMS	147
3.1 The need for heavier standards of atomic mass	147
3.2 Requirements of heavier standards	147
3.3 Suggested heavy secondary standards	148
3.4 Summary	152
3.5 Permanence of ^{18}O as primary standard	152
4. A TABLE OF ATOMIC MASSES FOR $A > 40$	153
ACKNOWLEDGEMENTS	159
REFERENCES	159

6

EL ELECTROMAGNETIC ENRICHMENT OF STABLE ISOTOPES

M. L. Smith

CONTENTS

	PAGE
1. INTRODUCTION	163
2. HISTORICAL—THE DEVELOPMENT OF THE LARGE 180° SEPARATOR	163
3. GENERAL DESCRIPTION OF THE PRESENT PRODUCTION MACHINE	166
4. DETAILED ACCOUNT OF THE SEPARATION PROCESS	169
4.1 Selection of charge material	169
4.2 The ion source	169
4.3 Conditions in the ion beam	173
4.4 Magnetic focusing effects	175
4.5 Electrical circuits	176
4.6 Collector arrangements	176
4.7 Collection of gases	178
4.8 Operation of the large separator	179
5. CHEMICAL PROBLEMS INVOLVED IN PROCESSING ISOTOPIC CONCENTRATES	180
6. APPLICATIONS OF ELECTROMAGNETICALLY ENRICHED STABLE ISOTOPES	181
6.1 Brief survey of typical applications	181
6.2 Fabrication of targets and special shapes for isotope application	182
6.3 Inventories of electromagnetically enriched isotopes	183
6.4 Comments on choice of isotope	185
7. APPLICATION OF SMALL LABORATORY ELECTROMAGNETIC SEPARATORS TO STABLE- AND ACTIVE-ISOTOPE ENRICHMENT	185
7.1 Relative usefulness of small separators and of enriched isotopes in nuclear research	185
7.2 List of medium and large electromagnetic separators	187
8. THE FUTURE OF ELECTROMAGNETIC SEPARATION	187
REFERENCES	188

FISSION RECOIL AND ITS EFFECTS

G. N. Walton

CONTENTS

	PAGE
1. INTRODUCTION	193
2. THE FISSION PROCESS	193
2.1 General description	193
2.2 Origin of the fission fragments	195
2.3 Mean recoil energy of fission fragments	197
2.4 Energy distribution in fission recoil	198
3. THE SLOWING-DOWN PROCESS	202
3.1 General description	202
3.2 Initial ionic charge on the moving fragment	204
3.3 Range-energy relationships	207
3.4 Estimates and measurements of the range of fission fragments	209
4. EFFECTS OF FISSION RECOIL ON THE SURROUNDING MATERIAL	216
4.1 Displacement of atoms by fission fragments	216
4.2 Effects in solids	218
4.3 Chemical effects of fission recoil	219
5. CHEMICAL PROPERTIES OF FISSION PRODUCTS	222
5.1 Behaviour of mixed fission products	222
5.2 Behaviour of fission-product rare gases	223
5.3 Behaviour of fission products other than the rare gases	226
ACKNOWLEDGEMENTS	229
REFERENCES	229

MASSES OF ATOMS OF $A < 40$

J. Mattauch and F. Everling

Max Planck Institut für Chemie, Mainz, Germany

CONTENTS

	PAGE
1. INTRODUCTION	234
2. THE EXPERIMENTAL Q -VALUES, AND THE MASSES AND BINDING ENERGIES CALCULABLE THEREFROM	235
3. COMPUTATION OF MASSES FROM NUCLEAR REACTION DATA	238
4. BINDING ENERGIES	247
5. COMPARISON WITH MASS-SPECTROSCOPIC DATA	259
REFERENCES	265
