1

THE BUBBLE CHAMBER*

D. V. Bugg

Cavendish Laboratory, University of Cambridge

CONTENTS

PAGE

1. INTRODUCTION 2

2. THEORIES OF BUBBLE CHAMBER OPERATION 5
   - 2.1 The operating range 5
   - 2.2 The foam limit 6
   - 2.3 Bubble nucleation by ionizing particles 7
   - 2.4 The bubble density along particle tracks 14
   - 2.5 The rate of bubble growth 15
   - 2.6 Lifetimes of bubble nuclei 16
   - 2.7 The expansion cycle 17

3. LIQUIDS USED IN BUBBLE CHAMBERS 19
   - 3.1 Organic liquids 19
   - 3.2 Liquid hydrogen 22
     - (*a*) Liquid expansion systems 23
     - (*b*) Vapour expansion systems 26
   - 3.3 Deuterium 31
   - 3.4 Helium 31
   - 3.5 Gas-liquid and liquid-liquid mixtures 32
   - 3.6 Heavy liquids 33

4. ILLUMINATION AND PHOTOGRAPHY 36

5. BUBBLE CHAMBER MAGNETS 41

6. THE ANALYSIS OF BUBBLE CHAMBER PHOTOGRAPHS . . 44
   - 6.1 The nature of the problem 44
   - 6.2 Semi-automatic measuring devices 45
   - 6.3 Franckenstein 48

7. IMPROVEMENTS IN THE DUTY CYCLE OF THE BUBBLE CHAMBER 50

REFERENCES 51

* Work performed while the author was a guest of the Brookhaven National Laboratory, under the auspices of the U.S. Atomic Energy Commission.

RESONANCE FLUORESCENCE IN NUCLEI

Franz R. Metzger

Bartol Research Foundation of the Franklin Institute, Swarthmore, Pennsylvania

CONTENTS

PAGE

1. INTRODUCTION 54

2. GENERAL CONSIDERATIONS 56
   - 2.1. Cross-sections 56
   - 2.2. Doppler effect 56
   - 2.3. Recoil energy losses 58
   - 2.4. Scattering experiment 59
   - 2.5. Self-absorption experiment 62
   - 2.6. Transmission experiment 63
   - 2.7. Classification of sources; energy distribution of the exciting radiation 64

3. GROUP A SOURCES ($\tau_{coll} \ll \tau_{level}$) 65
   - 3.1. Background radiation 67
   - 3.2. Centrifuge method 69
   - 3.3. Thermal method 71

4. GROUP B SOURCES (τ_{coll} not $\ll \tau_{level}$) 73
   - 4.1. Radioactive isotopes 74
     - (*a*) solid and liquid sources 74
     - (*b*) gaseous sources 74
   - 4.2. Nuclear reactions 78
     - (*a*) background problems 78
     - (*b*) (p,α)-reactions 79
     - (*c*) inelastic scattering 80
     - (*d*) proton capture 81

5. BREMSSTRAHLUNG 82

6. SUMMARY OF RESULTS, COMPARISON WITH OTHER METHODS 83

REFERENCES 86

SPALLATION

Bernard G. Harvey

Lawrence Radiation Laboratory, University of California, Berkeley, California

CONTENTS

PAGE

1. INTRODUCTION 90

2. THE CASCADE STEP 91
   - 2.1 Theory 91
   - 2.2 The Monte Carlo calculations 94
   - 2.3 Energy spectra and angular distributions of emitted particles . . 97
   - 2.4 Results of radiochemical experiments 100
     - 2.4.1 General comments 100
     - 2.4.2 Mass-yield distributions 101
     - 2.4.3 Surface interactions 105
     - 2.4.4 The fragmentation process 106
     - 2.4.5 Reactions induced by mesons 111

3. THE EVAPORATION STEP 112
   - 3.1 Introduction 112
   - 3.2 Evaporation theory 112
   - 3.3 Evaporation Monte Carlo calculations 114
   - 3.4 Neutron evaporation from heavy nuclei 115

REFERENCES 117

OPTICAL MODEL FOR NUCLEAR SCATTERING

A. E. Glassgold

Lawrence Radiation Laboratory, University of California, Berkeley, California

CONTENTS

PAGE

1. INTRODUCTION 124

2. THE OPTICAL MODEL POTENTIAL 126

3. NUCLEON SCATTERING 130

(*a*) Low energy neutron scattering (0–14 MeV) 130
(*b*) Low energy proton scattering (0–17 Mev) 138
(*c*) Nucleon scattering at intermediate energies (20–400 MeV) . . . 140
(*d*) Relation between nucleon-nucleon and nucleon-nucleus scattering . 146
(*e*) Nucleon scattering at very high energies (greater than 400 MeV) . . 149

4. SCATTERING OF PARTICLES OTHER THAN NUCLEONS . . 151

(*a*) Alpha-particle scattering. 151
(*b*) Scattering of low-energy deuterons 156
(*c*) Antiproton scattering 157

MEASUREMENT OF HELICITY

Lee Grodzins

Brookhaven National Laboratory, Upton, New York

CONTENTS

PAGE

1. INTRODUCTION 165

2. SOURCES OF HELICITY 167

2.1 Before Lee and Yang 167
2.1.1 Compton scattering by polarized electrons 168
2.1.2 Gamma-ray emission from polarized nuclei 168
2.1.3 Annihilation quanta 168
2.1.4 Compton scattering of helical photons 169
2.1.5 External bremsstrahlung and pair production 169
2.1.6 Annihilation of positrons in flight 169
2.1.7 One-quantum annihilation and the photoelectric effect . . 170
2.2 Since Lee and Yang 171
2.2.1 Gamma rays following beta decay 171
2.2.2 Polarization of internal conversion electrons following beta decay 174
2.2.3 Inner bremsstrahlung 174
2.2.4 Beta rays from unpolarized nuclei 175
2.2.5 π and μ meson decay 176

3. MEASUREMENT OF THE HELICITY OF GAMMA RAYS . . 176

3.1 Compton effect, theory 177
3.1.1 Differential cross-section 178
3.1.2 Total cross-section 180
3.1.3 Sources of polarized bound electrons 180
3.2 Compton effect, experiment 182
3.2.1 Transmission through magnetized iron 182
3.2.2 Angular dependence 185
3.2.3 Beard and Rose method 187
3.2.4 β–$\mathcal{H}_\gamma$ measurements 187
3.2.5 Summary of experimental results of β–$\mathcal{H}_\gamma$ measurements . . 190

4. MEASUREMENT OF THE HELICITY OF ELECTRONS . . . 193

4.1 Mott scattering 193
4.1.1 Mostly history 193
4.1.2 Absolute measurements 199
4.1.3 Summary of results 205
4.2 Møller and Bhabha scattering 206
4.2.1 Theory 206
4.2.2 Experiment 206

PAGE

4.3 Bremsstrahlung 210
4.3.1 External 210
4.3.2 Inner 212
4.3.2.1 K-capture 212
4.3.2.2 β-emission 214
4.4 Cascade-producing electrons (from μ^- and μ^+ decay) 214

5. MEASUREMENT OF THE HELICITY OF POSITRONS . . . 216
5.1 Page and Heinberg experiment 216
5.2 Annihilation in flight quanta 219
5.3 Annihilation with polarized electrons 223
5.3.1 near zero energy 224
5.3.2 in flight 225
5.4 Summary of positron helicity measurements 225

6. MEASUREMENT OF THE HELICITY OF THE NEUTRINO AND ANTI-NEUTRINO 226
6.1 Relation between neutrino helicity and β-decay interaction mode . 226
6.2 Helicity of the neutrino 227
6.3 Helicity of the anti-neutrino 235

7. SUMMARY 235

REFERENCES 238

WEAK INTERACTIONS

J. J. Sakurai

*Laboratory of Nuclear Studies, Cornell University, Ithaca, New York**

CONTENTS

PAGE

1. INTRODUCTION 244

2. THE τ-θ PUZZLE AND THE QUESTION OF PARITY NONCONSERVATION 245

3. THE π-μ-e SEQUENCE 250
   - 3.1 Pion decay 250
   - 3.2 The CPT theorem 252
   - 3.3 Muon decay 254
   - 3.4 The two-component neutrino theory and lepton conservation . . 257

4. β DECAY 263
   - 4.1 Old theory 263
   - 4.2 Parity experiments 266
   - 4.3 Recoil experiments 276

5. HYPERON DECAY 280

6. THE UNIVERSAL VA THEORY 285

7. UNSOLVED PROBLEMS 293

Appendix A. THE CPT THEOREM AND THE HERMITICITY REQUIREMENT 299

Appendix B. TWO-COMPONENT WAVE EQUATIONS 301

Appendix C. LEPTON CONSERVATION IN β DECAY . . . 304

NOTE ADDED (November, 1958) 306
