## SPARK CHAMBERS

J. G. RUTHERGLEN

### CONTENTS

1. INTRODUCTION .. .. .	3
2. PRINCIPLES OF OPERATION OF TRIGGERED SPARK CHAMBER .. .. .	4
3. THE GASEOUS PROCESSES INVOLVED IN SPARK CHAMBER OPERATION .. .. .	5
3.1. Basic mechanism of spark formation .. .. .	5
3.2. Formative time .. .. .	6
3.3. Electric field requirement .. .. .	8
3.4. Effects of variation in gap spacing .. .. .	9
3.5. Methods of clearing and effects of impurities .. .. .	11
3.6. Recovery time .. .. .	13
3.7. Effects of primary ionization density .. .. .	14
4. CONSTRUCTION OF SPARK CHAMBERS .. .. .	15
5. ELECTRONICS .. .. .	18
5.1. General requirements .. .. .	18
5.2. The high-voltage pulser .. .. .	18
5.3. Methods of connection to the spark chamber plates .. .. .	20
6. PHOTOGRAPHIC RECORDING OF TRACKS .. .. .	21
7. ACCURACY OF TRACK LOCATION .. .. .	22
8. TYPICAL APPLICATIONS OF SPARK CHAMBERS .. .. .	25
REFERENCES .. .. .	26

## SEMICONDUCTOR COUNTERS

G. DEARNALEY

## CONTENTS

1. INTRODUCTION .. .. .	29
2. INSULATORS AND SEMICONDUCTORS .. .. .	32
(a) An outline of the theory and nomenclature .. .. .	32
(b) Semiconductor junctions .. .. .	34
3. CONDUCTION COUNTERS .. .. .	36
(a) The requirements and advantages of solid counters .. .. .	36
(b) Methods of preparation and performance .. .. .	39
4. SEMICONDUCTOR JUNCTION DETECTORS .. .. .	40
(a) The use of junctions in particle detection .. .. .	40
(b) Preparation of junction detectors .. .. .	42
(i) Diffused junctions .. .. .	42
(ii) Surface-barrier detectors .. .. .	43
(iii) Lithium-drifted detectors .. .. .	44
(c) Characteristics of junction detectors .. .. .	45
(d) Comparison of diffused-junction and surface-barrier counters .. .. .	52
5. PULSE AMPLIFIERS FOR SEMICONDUCTOR DETECTORS .. .. .	53
6. APPLICATION OF SEMICONDUCTOR COUNTERS IN NUCLEAR PHYSICS .. .. .	56
(a) General applications .. .. .	56
(b) Silicon $dE/dx$ detector .. .. .	60
(c) Detector for polarization studies .. .. .	61
(d) Multiple detectors .. .. .	62
(e) Semiconductor fast-neutron detectors .. .. .	62
7. CONCLUSIONS .. .. .	67
REFERENCES .. .. .	67

# THEORETICAL TECHNIQUES OF HIGH-ENERGY BEAM DESIGN

N. M. KING

## CONTENTS

1.	INTRODUCTION .. .. .	73
2.	BEAM DYNAMICS .. .. .	74
	2.1. Equations of motion .. .. .	74
	2.2. Matrix representation .. .. .	74
	2.3. Phase space description .. .. .	75
3.	BASIC BEAM ELEMENTS .. .. .	76
	3.1. Drift lengths .. .. .	76
	3.2. Quadrupole magnets .. .. .	76
	3.3. Bending magnets .. .. .	85
	3.4. Velocity separators .. .. .	89
4.	QUADRUPOLE SYSTEM DESIGN .. .. .	97
	4.1. Thin lens approximation .. .. .	98
	4.2. Analytic solutions for particle trajectories .. .. .	100
	4.3. Numerical solution for particle trajectories .. .. .	101
	4.4. Numerical solution for beam profiles and ellipses .. .. .	102
	4.5. Momentum spread in quadrupole systems .. .. .	103
	4.6. Transport problems .. .. .	104
5.	SEPARATED BEAM DESIGN .. .. .	105
	5.1. Typical beam layout .. .. .	105
	5.2. Transmission of wanted particles .. .. .	106
	5.3. Numerical procedures .. .. .	107
	5.4. Recent separated beam design .. .. .	108
6.	SPECIAL COMPONENTS .. .. .	108
	6.1. Particular magnet designs .. .. .	108
	6.2. Separation schemes .. .. .	109
	6.3. Correction of chromatic aberration .. .. .	110
	6.4. Enhancement of separation: "magnetic slit" .. .. .	110
	6.5. Large acceptance: (the magnetic horn) .. .. .	111
	REFERENCES .. .. .	112

# INTRODUCTION TO THE STRUCTURE ANALYSIS OF COLLISION AMPLITUDES

R. J. EDEN

## CONTENTS

1. INTRODUCTION .. .. .	119
(a) Objectives and relation to experiments .. .. .	119
(b) Methods and assumptions: Axiomatic; Perturbation; Heuristic; Phenomenological .. .. .	120
(c) Reading guide .. .. .	122
2. MATHEMATICAL INTRODUCTION .. .. .	124
(a) Dispersion relations .. .. .	124
(b) Potential scattering .. .. .	128
(c) Simple Feynman diagrams .. .. .	128
(d) A resonance approximation .. .. .	129
3. FORM FACTORS FOR SCALAR PARTICLES .. .. .	130
(a) Dispersion relations for vertex parts .. .. .	130
(b) Physical interpretation (normal and anomalous thresholds) .. .. .	130
(c) Interaction effects in intermediate states .. .. .	132
4. SCATTERING OF EQUAL MASS PARTICLES .. .. .	132
(a) Kinematics .. .. .	132
(b) Normal thresholds and unitarity .. .. .	134
(c) Dispersion relations at fixed momentum transfer .. .. .	135
(d) Dispersion relations at fixed angle .. .. .	136
(e) Dispersion relations for the absorptive part .. .. .	137
(f) The Mandelstam representation .. .. .	138
(g) Partial wave dispersion relations .. .. .	139
5. UNITARITY AND EQUATIONS FOR PARTIAL WAVE AMPLITUDES .. .. .	140
(a) Unitarity and the elastic approximation .. .. .	140
(b) Physical interpretation of the left-hand cut .. .. .	140
6. PION-NUCLEON SCATTERING .. .. .	142
(a) Kinematics .. .. .	142
(b) Partial wave dispersion relations .. .. .	144
7. ASYMPTOTIC BEHAVIOUR OF AMPLITUDES .. .. .	146
(a) Subtraction terms .. .. .	146
(b) Analyticity in $l$ and the Regge representation .. .. .	146
8. DISCUSSION .. .. .	148
REFERENCES .. .. .	150

# THE INTERACTION OF STRANGE PARTICLES WITH NUCLEI

E. H. S. BURHOP, D. H. DAVIS, and J. ZAKRZEWSKI

## CONTENTS

1. BASIC INTERACTIONS OF STRANGE PARTICLES WITH NUCLEONS .. .. .	157
1.1. Introduction .. .. .	157
1.2. Interaction of $K^-$ -mesons with nucleons .. .. .	157
1.3. Interaction of $K^+$ -mesons with nucleons .. .. .	168
1.4. Interaction of $K^0$ -mesons with nucleons .. .. .	171
1.5. Interaction and scattering of hyperons by nucleons .. .. .	171
2. CAPTURE OF NEGATIVELY CHARGED PARTICLES BY ATOMIC NUCLEI .. .. .	173
2.1. Introduction .. .. .	173
2.2. The mechanism of negative particle capture into atomic orbitals.. .. .	173
2.3. Formation of mesic atoms in nuclear emulsion .. .. .	174
2.4. Quantum numbers of initial capture orbit.. .. .	175
2.5. Nuclear capture from atomic orbits of the mesic atom .. .. .	175
3. THE INTERACTION OF $K^-$ -MESONS WITH NUCLEI .. .. .	179
3.1. $K^-$ -meson interactions at rest .. .. .	179
3.2. Non-mesic $K^-$ interactions at rest .. .. .	196
3.3. Nuclear interactions of $K^-$ -mesons in flight .. .. .	203
3.4. The role of isobar formation in $K^-$ interactions with nuclei .. .. .	208
4. HYPERFRAGMENTS AND THE INTERACTION OF $\Lambda^0$ -HYPERONS WITH NUCLEI .. .. .	215
4.1. The discovery of hyperfragments .. .. .	215
4.2. Models of hyperfragment production .. .. .	222
4.3. Properties of hyperfragments and the $\Lambda$ - $N$ interaction .. .. .	224
5. THE INTERACTION OF OTHER STRANGE PARTICLES WITH NUCLEI .. .. .	232
5.1. The scattering of $K^+$ -mesons by nuclei .. .. .	232
5.2. The interaction of $\Sigma$ -hyperons with nuclei .. .. .	240
6. THE USE OF STRANGE PARTICLES AS PROBES FOR THE STUDY OF THE NUCLEUS .. .. .	244
6.1. Evidence for the peripheral capture of $K^-$ -mesons .. .. .	244
6.2. Use of $K^-$ -mesons as probes for the study of the nucleus .. .. .	245
6.3. Possible use of $\Sigma^-$ -hyperons as probes of the nuclear surface .. .. .	249
REFERENCES .. .. .	250

# ELECTROMAGNETIC PROPERTIES OF THE MUON

F. J. M. FARLEY

CERN, European Organization for Nuclear Research

## CONTENTS

INTRODUCTION .. .. .	259
THEORETICAL BASIS .. .. .	260
EVIDENCE FOR SPIN $\frac{1}{2}$ .. .. .	263
MAGNETIC MOMENT .. .. .	265
MEASUREMENTS OF THE MUON MASS .. .. .	270
DIRECT MEASUREMENT OF THE ANOMALOUS MAGNETIC MOMENT .. .. .	273
THEORETICAL CONSEQUENCES OF ( $g-2$ ) EXPERIMENT .. .. .	278
BEST VALUES FOR THE MUON MASS AND CHARGE .. .. .	281
HYPERFINE SPLITTING OF MUONIUM BY MICROWAVE RESONANCE .. .. .	281
ELECTROMAGNETIC PROPERTIES AT HIGH ENERGY .. .. .	283
(i) Muon scattering by nuclei .. .. .	284
(ii) Production of knock-on electrons .. .. .	285
(iii) Bremsstrahlung .. .. .	286
(iv) Direct pair production (tridents) .. .. .	287
(v) Muon pair production .. .. .	287
(vi) Photoneutron production .. .. .	288
CONCLUSION .. .. .	289
ACKNOWLEDGEMENTS .. .. .	289
REFERENCES .. .. .	290
