# LARGE TRANSVERSE MOMENTUM AND LARGE MASS PRODUCTION IN HADRONIC INTERACTIONS

C. MICHAEL

*Department of Applied Mathematics and Theoretical Physics, University of Liverpool, P.O. Box 147, Liverpool L69 3BX, U.K.*

## CONTENTS

|                                               |    |
|-----------------------------------------------|----|
| 1. INTRODUCTION                               | 1  |
| 2. SALIENT FEATURES OF DATA                   | 4  |
| 2.1. Large transverse momentum                | 5  |
| 2.2. Large mass                               | 9  |
| 3. HADRONIC MODELS                            | 12 |
| 3.1. Résumé of low $p_T$ models               | 12 |
| 3.2. Extensions to large $p_T$ and kinematics | 15 |
| 3.3. Transverse mass scaling                  | 18 |
| 4. CONSTITUENT SCATTERING MODELS              | 22 |
| 4.1. Basis of parton approach                 | 22 |
| 4.2. Lepton pair production                   | 25 |
| 4.3. Large $p_T$ production                   | 27 |
| 4.4. Large mass production                    | 33 |
| 5. PRODUCTION ON NUCLEAR TARGETS              | 34 |
| 6. CONCLUSIONS                                | 36 |
| REFERENCES                                    | 37 |

# AN EXPERIMENTER'S HISTORY OF NEUTRAL CURRENTS†

F. SCIULLI

*California Institute of Technology, Pasadena, California 91125, U.S.A.*

## CONTENTS

|                                                                   |    |
|-------------------------------------------------------------------|----|
| 1. HISTORICAL MOTIVATIONS                                         | 42 |
| 2. EXPERIMENTAL SEARCHES                                          | 45 |
| 3. FIRST POSITIVE INDICATIONS                                     | 47 |
| 4. NEUTRAL CURRENTS CORROBORATED                                  | 50 |
| 5. NEUTRINO EXPERIMENTS ON NEUTRAL CURRENTS                       | 53 |
| 5.1. Savannah River reactor experiment                            | 53 |
| 5.2. Los Alamos (LAMPF)-UCI experiment                            | 55 |
| 5.3. CERN Proton Synchrotron (PS)                                 | 56 |
| (a) Gargamelle bubble chamber                                     | 56 |
| (b) Aachen-Padova counter experiment                              | 56 |
| 5.4. Brookhaven Alternate Gradient Synchrotron (AGS)              | 57 |
| (a) Seven-foot bubble chamber                                     | 57 |
| (b) Harvard-Pennsylvania-Wisconsin (HPW) collaboration            | 58 |
| (c) Columbia-Illinois-Rockefeller (CIR) collaboration             | 60 |
| 5.5. Argonne National Laboratory—twelve-foot bubble chamber       | 61 |
| 5.6. Fermi National Accelerator Laboratory (FNAL)                 | 61 |
| (a) VPI-ASF-Oxford-Maryland collaboration                         | 63 |
| (b) Caltech-Fermilab (CITF) collaboration                         | 63 |
| (c) Harvard-Pennsylvania-Wisconsin-Fermilab (HPWF) collaboration  | 64 |
| (d) Fifteen-foot bubble chamber                                   | 66 |
| 5.7. CERN Super Proton Synchrotron (SPS)                          | 67 |
| (a) CERN-Dortmund-Heidelberg-Saclay (CDHS) collaboration          | 67 |
| (b) Aachen-Bonn-London-Oxford-Saclay collaboration (BEBC)         | 69 |
| (c) Aachen-CERN-Frascati-Hamburg-Moscow-Napoli-Roma collaboration | 69 |
| 6. SOME GENERAL EXPERIMENTAL COMMENTS                             | 69 |
| 6.1. Leptonic processes                                           | 69 |
| 6.2. Exclusive hadronic channels                                  | 70 |
| (a) Pion production                                               | 70 |
| (b) Elastic scattering                                            | 70 |
| 6.3. Inclusive cross-sections                                     | 70 |
| 7. THE NEUTRAL CURRENT—WHAT DO WE KNOW?                           | 72 |
| 8. CONCLUSIONS                                                    | 77 |
| APPENDIX A: THE WEINBERG-SALAM MODEL                              | 77 |
| APPENDIX B: THE NEUTRAL CURRENT NEUTRINO CROSS-SECTION            | 79 |
| (a) General considerations                                        | 79 |
| (b) $\nu_\mu e^- \rightarrow \nu_\mu e^-$                         | 80 |
| (c) $\nu_e e^- \rightarrow \nu_e e^-$                             | 80 |
