

# CONTENTS

Foreword	vii
Introductory Note	1
Chapter 1. Quarks and the light hadrons R. H. DALITZ	7
Chapter 2. The spectroscopy of massive quark–antiquark systems KURT GOTTFRIED	49
Chapter 3. Confinement and deconfinement of quarks in nuclear matter GORDON BAYM	73
Chapter 4. Pions and the chiral bag MANNQUE RHO	103
Chapter 5. Nucleon–nucleon forces from bags, quarks and boson exchange G. E. BROWN	147
Chapter 6. Effective interactions of quarks and static properties of hadrons S. B. GERASIMOV	207
Chapter 7. Quark effects in nuclear physics CHUN WA WONG	223
Chapter 8. Microscopic approach to hadrons and nuclei using quarks D. ROBSON	257
Chapter 9. Quark interactions and colour chemistry CHAN HONG-MO	301
Chapter 10. Quarks and nuclei: An experimentalist’s point of view B. POVH	325
Chapter 11. Quark–parton picture of the cumulative production A. V. EFREMOV	345
Chapter 12. The electromagnetic structure of ${}^2\text{H}$ , ${}^3\text{He}$ and ${}^4\text{He}$ at large $Q^2$ B. T. CHERTOK	367
Chapter 13. Large $N$ expansions work: A semi-classical perturbation theory for quantum mechanics LEONARD D. MLODINOW	387

Chapter 14.	Confinement and hadron–hadron interactions by general relativistic methods	
	ERASMO RECAMI	401
Chapter 15.	A colour exclusion principle? Possible origin for the repulsion between nucleons at short distances	
	M. HARVEY	413
Chapter 16.	Nucleon–nucleon potential in the cluster model with six quarks	
	M. ROSINA, M. CVETIĆ-KRIVEC, B. GOLLI and N. MANKOČ-BORŠTNIK	417
Chapter 17.	A primer on grand unification	
	KURT GOTTFRIED	425
