

# CONTENTS

Foreword		ix
Chapter 1.	The decay of the vacuum in supercritical fields of giant nuclear systems J. FINK, J. A. MARUHN, B. MÜLLER, U. MÜLLER, L. NEISE, J. REINHARDT, T. DE REUS, A. SCHÄFER, P. SCHLÜTER, W. SCHMIDT, S. SCHRAMM, G. SOFF, D. VASAK and W. GREINER	1
Chapter 2.	Delta electron emission as an atomic clock in deep-inelastic and intermediate energy heavy ion collisions T. DE REUS, J. REINHARDT, B. MÜLLER, W. GREINER, U. MÜLLER and G. SOFF	57
Chapter 3.	Positron production in heavy ion-atom collisions P. KIENLE	77
Chapter 4.	Magic numbers, reinforcing shell gaps and competing shapes in nuclei far from stability J. H. HAMILTON	107
Chapter 5.	Collective states of neutron deficient isotopes of Br, Kr, Rb and Sr. A microscopic description D. P. AHALPARA, A. ABZOUZI and K. H. BHATT	135
Chapter 6.	Real and imaginary part of the heavy ion potential AMAND FAESSLER	147
Chapter 7.	Some aspects of heavy ion physics between 20 and 50 MeV/u CHRISTIAN NGÔ	161
Chapter 8.	Linear momentum transfer C. NGÔ and S. LERAY	163
Chapter 9.	Nuclear calefaction C. NGÔ, D. DALILI, R. LUCAS, C. CERRUTI, S. LERAY, C. MAZUR, M. RIBRAG, T. SUOMIJARVI, M. BERLANGER, S. CHIODELLI, A. DEMEYER and D. GUINET	171
Chapter 10.	Mechanical instability of hot and compressed nuclei investigated in the framework of a spherical time dependent Thomas-Fermi approach J. NEMETH, C. NGÔ, E. TOMASI and M. BARRANCO	181

Chapter 11.	Intermediate dissipative phenomena in heavy-ion reactions at low energies in the $A \sim 100$ nuclear mass region R. A. RICCI	187
Chapter 12.	Do medium heavy fragments give evidence for a liquid gas phase transition? R. TROCKEL	225
Chapter 13.	Theory of relativistic heavy ion collisions JOSEPH J. MOLITORIS, DETLEV HAHN and HORST STÖCKER	239
Chapter 14.	Boltzmann equations and hydrodynamics for nuclear systems M. K. WEIGEL	327
Chapter 15.	Pions and hard photons as probes for nucleus–nucleus collisions PETER GRIMM and ECKART GROSSE	339
Chapter 16.	Pion production in high energy nucleus–nucleus collisions C. BESLIU, V. BOLDEA, V. TOPOR POP, R. TOPOR POP, V. POPA, A. OLARIU and A. JIPA	353
Chapter 17.	From basic reaction mechanism to new forms of nuclear matter S. NAGAMIYA	363
Chapter 18.	Introduction to QCD thermodynamics and the quark–gluon plasma MIKLOS GYULASSY	403
Chapter 19.	A model for turning quark matter into nuclear matter by clustering of quarks SACHIKO SHIMIZU	443
Chapter 20.	Investigation of nuclear matter properties by means of high energy nucleus–nucleus collisions R. STOCK	455
Chapter 21.	Perspectives of ultrarelativistic nucleus–nucleus collisions HANS J. SPECHT	479
Chapter 22.	Heavy ion accelerators: Status and prospects M. PIGNANELLI	483
Chapter 23.	Tachyons: May they have a role in elementary particle physics? ERASMO RECAMI and WALDYR A. RODRIGUES, JR.	499
