ABSTRACT

Recent experimental and theoretical results for intermediate energy nucleus-nucleus collisions ($E/A \approx 20$ –200 MeV) will be reviewed. The experimental topics include incomplete fusion reactions, linear momentum transfer measurements, non-equilibrium light and complex particle emission, sub-threshold pion production, high-energy photon emission, and particle correlations at large and small relative momenta. The theoretical discussion covers thermal models, liquid-gas phase transitions, transport equations, numerical simulations, two-particle correlation functions and cluster formation.

KEY WORDS

Intermediate energy nucleus-nucleus collisions; incomplete fusion; nonequilibrium particle emission; liquid-gas phase transition of nuclear matter; entropy production; numerical simulations; two-particle correlation functions; populations of excited states.

CONTENTS

1. INTRODUCTION	34
2. INCOMPLETE FUSION REACTIONS	35
2.1. Angular momentum deposition	36
2.2. Systematics of linear momentum transfer	36
2.3. Energy deposition	39
3. REACTION DYNAMICS	40
3.1. Statistical models	40
3.2. Reaction trajectories - two illustrative models	42
3.3. Numerical simulations	44
4. NONCOMPOUND LIGHT PARTICLE EMISSION	48
4.1. Inclusive light particle distributions	48
4.2. Deflection by the mean field	53
4.3. Light particle correlations at large relative momenta	57
5. EMISSION OF PIONS AND HIGH ENERGY PHOTONS	61
5.1. Emission of pions	61
5.2. Emission of high energy photons	63
6. EMISSION OF INTERMEDIATE MASS FRAGMENTS	64
6.1. Mass distributions	64
6.2. Coincidence measurements with intermediate mass fragments	67
6.3. Liquid-gas phase transition	69
6.4. Towards microscopic descriptions of fragmentation	72
7. POPULATION OF EXCITED STATES	77
7.1. Population of particle stable states	78
7.2. Population of particle unbound states	79
8. TWO-PARTICLE CORRELATION FUNCTIONS	85
8.1. Two-particle correlation functions from inclusive measurements	86
8.2. Coulomb distortions	91
8.3. Reaction filters	93
9. CONCLUSION	96
ACKNOWLEDGEMENTS	97
REFERENCES	98
