Chapter 1.	Soliton models for nuclear physics M. C. BIRSE	1
Chapter 2.	CP violation and the flavour structure of weak interactions K. KLEINKNECHT	81
Chapter 3.	Weak non-mesonic decays of Λ -hypernuclei J. COHEN	139
Chapter 4.	Many-body theory of high energy heavy ion reactions W. CASSING and U. MOSEL	235
Chapter 5.	Isospin and F-spin in the interacting boson model J. P. ELLIOTT	325
	Contents of Some Previous Volumes	353

CONTENTS

1. Introduction	3
1.1 Historical Outline	4
1.2 A Nontopological Soliton	6
1.3 Colour confinement	11
2. Chiral Quark-Meson Models	13
2.1 Hidden Chiral Symmetry	13
2.2 Chiral Solitons	15
2.3 From QCD to Chiral Solitons?	22
3. Colour-Dielectric Models	26
3.1 The Dielectric Field	26
3.2 Confining Solitons	29
3.3 Hybrid Solitons	31
4. Coherent States	32
5. Collective Motion	35
5.1 Momentum Projection	36
5.2 Variation after Projection	41
5.3 Relativity and Boosts	42
5.4 Generator Coordinates	46
6. Hedgehogs	49
6.1 Spin and Isospin Projection	50
6.2 Variation after Projection	54
6.3 Cranking	57
7. Excitations	61
7.1 Random Phase Approximation	61
7.2 Strange Excitations	64
8. Soliton Matter	68
9. Summary and Outlook	71

CP Violation and the Flavour Structure of Weak Interactions

K. KLEINKNECHT

Institut für Physik, Universität Mainz, D-6500 Mainz, F.R.G.

This article reviews the experimental situation concerning CP violation in decays of neutral K mesons and its relation to the flavour structure of weak interactions.

TABLE OF CONTENTS

1. Flavour Structure of Weak Interactions	82
1.1 The Cabibbo Model	82
1.2 The Kobayashi-Maskawa Quark Mixing Scheme	84
1.3 Measurements of Weak Quark Coupling Constants	85
1.4 Allowed Ranges of Mixing Angles for 3 or 4 Generations	91
1.5 Discussion	92
1.6 Outlook	94
2. CP Violation and K^0 Decays	94
2.1 Phenomenology and Models of CP Violation	94
2.2 K_L - K_S Regeneration	97
2.3 Interference between Decay Amplitudes of K_L and K_S	100
3. Experiments on CP Violation in K^0 Decays	103
3.1 K_S Lifetime	104
3.2 K_L - K_S mass Difference	104
3.3 Rate of $K_L \rightarrow \pi^+ \pi^-$ Decay	108
3.4 Phase ϕ_{+-}	109
3.5 Phase Difference $\phi_{00} - \phi_{+-}$ and Phase ϕ_{00}	113
3.6 Charge Asymmetry in Semileptonic Decays	117
3.7 Rate of $K_L \rightarrow \pi^0 \pi^0$ Decay: Measurement of ϵ'/ϵ and First Observation of Direct CP Violation	118
3.8 Parameters of CP Violation	126
4. Implications of Experimental Results on the Standard Model parameters	127
5. Conclusion	133

Table of Contents

1.	Introduction	141
1.1	Hypernuclear physics: Why and how	141
1.2	Weak interactions in Λ -hyperons and hypernuclei	142
2.	Review of characteristics and experimental data for hypernuclear weak decays	144
2.1	The total hypernuclear lifetime: Pioneering experiments	144
2.2	Specific hypernuclear decay modes: Early measurements	147
2.3	Hypernuclear lifetimes and decay modes: Recent results	151
3.	Theory of non-mesonic weak decays of Λ -hypernuclei	161
3.1	Introduction: An overview of decay mechanisms	161
3.2	Phenomenology of the $\Lambda \rightarrow N\pi$ nonleptonic decay mode	161
3.3	Non-mesonic decays of light hypernuclei: The phenomenological Approach	171
3.4	Microscopic models for the non-mesonic decay: The one pion exchange mechanism	177
3.4.1	Why one pion exchange?	177
3.4.2	The transition potential	177
3.4.3	The transition rates in a Fermi gas model; general properties of the transition amplitude	181
3.4.4	Finite-hypernuclear treatment	185
3.4.5	The role of short-range two-body correlations, distortion effects and pion-baryon-baryon vertex function	189
3.5	Elaborate microscopic models for non-mesonic decay	192
3.5.1	Introduction	192
3.5.2	Additional meson exchanges	192
3.5.3	Hybrid quark-hadron model	200
3.5.4	Many-body RPA (ring diagrams) renormalization effects in one pion exchange	204
3.6	Numerical results and comparison with experimental data	207
4.	Discussion, future prospects and conclusions	222
