Preface	iv
Lattice Vibrations. By W. COCHRAN	1
Studies in the Preparation and Behaviour of Nearly Perfect Metal Surfaces. By E. MENZEL	47
The Generation of High Magnetic Fields. By D. BRUCE MONTGOMERY	69
X-ray Crystallography of Large Molecules of Biological Importance. By A. C. T. NORTH	105
The Van Allen Particles. By H. ELLIOT	145
Wavelength Measurements in the Vacuum Ultra-violet. By B. EDLÉN	181
Atmospheric Tracers and the Study of the General Circulation of the Atmosphere. By P. A. SHEPPARD	213
Ultra-high-speed Photography. By K. R. COLEMAN	269
Macroscopic Symmetry in Space-Time. By R. R. BIRSS	307
The Electronic Properties of Liquid Metals. By N. E. CUSACK	361
The Theory of Irreversible Processes. By G. V. CHESTER	411

LATTICE VIBRATIONS

By W. COCHRAN

Crystallographic Laboratory, Cavendish Laboratory, Cambridge

CONTENTS

	PAGE
§ 1. Introduction	1
§ 2. Theory of lattice dynamics	2
§ 3. Covalent crystals	6
§ 4. Ionic crystals	10
§ 5. Molecular crystals	13
§ 6. Metallic crystals	16
§ 7. Theory of x-ray scattering	17
§ 8. Theory of neutron scattering	22
§ 9. X-ray experiments and results	27
§ 10. Neutron experiments and results	31
§ 11. Recent theoretical work: ionic and covalent crystals	36
§ 12. Recent theoretical work: metallic crystals	39
Acknowledgments	42
References	42

STUDIES IN THE PREPARATION AND BEHAVIOUR OF NEARLY PERFECT METAL SURFACES

By E. MENZEL

Physikalisches Institut, Technische Hochschule, Braunschweig, Germany

CONTENTS

	PAGE
§ 1. Importance of experiments on clean surfaces.....	47
§ 2. Requirements of a 'perfect' crystal surface	48
§ 3. Crystals of spherical shape	48
§ 4. Methods of checking requirements of cleanness, perfection and shape	49
4.1. Introduction	49
4.2. Surface impurities	49
4.3. Lattice imperfections in the surface	52
4.4. Smoothness.....	54
§ 5. Survey of methods of preparing surfaces	55
5.1. Cutting and polishing	55
5.2. Ion bombardment	56
5.3. Vacuum annealing	56
5.4. Field desorption and field evaporation	57
5.5. Cleavage in vacuum	57
5.6. Evaporated films.....	57
§ 6. Crystals with untouched surfaces.....	58
6.1. Preparation and shape of untouched crystals	58
6.2. Physical behaviour of the samples	60
6.3. Corrosion behaviour.....	61
References	64

THE GENERATION OF HIGH MAGNETIC FIELDS†

By D. BRUCE MONTGOMERY

The National Magnet Laboratory, Massachusetts Institute of Technology,
Cambridge 39, Massachusetts

CONTENTS

	PAGE
§ 1. Introduction	70
§ 2. Water-cooled magnets	71
2.1. Uniform current density	71
2.1.1. Field-current relations in a loop	71
2.1.2. Field-current relations in a current sheet	74
2.1.3. Field-current relations in a solenoid	74
2.1.4. Solenoid field-power relations (Fabry factors)	75
2.1.5. Minimum volume—maximum G	76
2.1.6. Summary of field, current and power relations for several current distributions	76
2.2. Bitter disks	76
2.3. Gaume distribution	77
2.4. Kelvin distribution	78
2.5. Cooling considerations	78
2.5.1. Basic cooling conditions of bulk flow, surface temperature and gradient	78
2.5.2. Specific power density and surface heat flux relations for magnets	79
2.6. Magnetic stresses	80
2.7. Comments on specific magnet constructions	82
2.7.1. Wire-wound solenoids	82
2.7.2. Hollow conductor solenoids	82
2.7.3. Tape-wound (spiral) solenoids	83
2.7.4. Disk-type (helical) solenoids	83
2.8. D.C. power supplies for high field magnets	83
2.8.1. Homopolar generators	83
2.8.2. Conventional commutator type generators	83
2.8.3. Rectifier systems	84
2.9. D.C. control systems	84
§ 3. The use of iron	84
3.1. Conventional iron magnets	84
3.2. Solenoids with iron return shells	85
3.3. Iron plugs	86
§ 4. Pulse magnets	86
4.1. Introduction	86
4.2. Discharge characteristics	86
4.2.1. Currents	86
4.2.2. Field relations	89
4.2.3. Skin depth	90
4.3. Specific relations for field, inductance and resistance	90
4.3.1. Field-current relations for a uniform current distribution	90
4.3.2. Field-current relations for a $j = j_1 a_1/r$ current distribution	90

† The work reported in this article was performed by the National Magnet Laboratory, a centre for research operated by Massachusetts Institute of Technology. Sponsored by The Solid State Sciences Division, Air Force Office of Scientific Research, Office of Aerospace Research, United States Air Force.

	PAGE
4.3.3. Calculation of resistance and inductance for a uniform current distribution.....	91
4.3.4. Calculation of resistance and inductance for a $j = j_1 a_1/r$ current distribution.....	91
4.4. Flux concentration.....	92
4.5. Magnetic stresses in pulse magnets.....	92
4.6. Temperature rise in pulse magnets.....	93
§ 5. Cryogenic magnets	93
5.1. Pulse magnets.....	93
5.2. Low duty-cycle magnets.....	94
5.3. Continuous duty magnets.....	95
§ 6. Superconducting solenoids	96
6.1. Materials.....	96
6.2. Design procedures.....	96
6.2.1. Field equations and volume.....	96
6.2.2. Current-carrying capacity of wires.....	96
6.3. Fabrication techniques.....	97
6.3.1. Solenoids wound from the non-brittle super- conductors	97
6.3.2. Solenoids made with intermetallic compounds	98
6.4. Power supplies and electrical operation.....	98
6.4.1. Power supplies.....	98
6.4.2. Persistent current operation.....	98
6.4.3. Quench protection.....	98
6.5. Energy storage and dissipation.....	99
§ 7. Field analysis	99
7.1. On-axis field profiles.....	99
7.2. Off-axis fields.....	99
7.3. Homogeneous fields.....	100
7.3.1. Short solenoids.....	100
7.3.2. Long solenoids	101
7.3.3. Field perturbation due to transverse access gaps	101
Acknowledgment	101
References.....	102

X-RAY CRYSTALLOGRAPHY OF LARGE MOLECULES OF BIOLOGICAL IMPORTANCE

By A. C. T. NORTH

Medical Research Council External Staff, Davy Faraday Research Laboratory,
The Royal Institution, London

CONTENTS

	PAGE
§ 1. Introduction	106
§ 2. Principles of crystal structure analysis.....	106
2.1. The crystal as a diffraction grating	106
2.2. Relationships between electron density and x-ray intensity	106
2.2.1. Projected views of crystal structure	109
2.2.2. Resolution of the Fourier image	109
2.3. Proceeding without phases	110
2.3.1. Refinement of trial structures	110
2.3.2. The Patterson function	110
2.3.3. The heavy atom method	111
2.4. The isomorphous replacement method	112
2.4.1. Use of anomalous scattering	115
2.5. X-ray fibre diagrams	116
§ 3. Application of x-ray crystallography to large molecules of biological origin	117
3.1. Introduction	117
3.2. Nucleic acids.....	118
3.3. Structure of RNA	121
3.4. Biological implications of the DNA structure	122
3.5. Structure of fibrous proteins.....	124
3.5.1. The k-m-e-f group	125
3.5.2. Collagen	128
3.6. Structure of globular proteins.....	129
3.6.1. Myoglobin	131
3.6.2. Haemoglobin	135
3.7. The structure of viruses	137
3.7.1. Tobacco mosaic virus.....	138
3.7.2. Spherical viruses.....	139
§ 4. Conclusions and future prospects.....	139
Acknowledgments	141
References	141

THE VAN ALLEN PARTICLES

By H. ELLIOT

Imperial College of Science and Technology, London

CONTENTS

	PAGE
§ 1. Introduction	145
§ 2. Motion of charged particles in the geomagnetic field.....	148
2.1. Størmer's treatment of the motion in a dipole field.....	148
2.2. Alfvén's approximate method for a dipole field.....	153
2.3. Motion in the geomagnetic field.....	160
2.4. Radiation by a charged particle in a magnetic field.....	162
§ 3. Artificial injection of energetic particles into the trapping region....	163
3.1. Project Argus	163
3.2. The high altitude nuclear explosion of 9 July 1962.....	166
§ 4. Intensity distribution and energy spectrum of the trapped particles	167
4.1. The proton component.....	167
4.2. The electron component.....	169
4.3. Particles heavier than protons.....	173
4.4. Artificially injected particles.....	173
§ 5. Origin and variability of the trapped particle flux.....	173
5.1. Variation of the trapped particle flux with time.....	174
5.2. X-rays generated by energetic electrons entering the atmosphere	177
5.3. Direct observation of charged particles entering the atmosphere	178
5.4. Origin of the particles	178
Acknowledgments.....	179
References	179

WAVELENGTH MEASUREMENTS IN THE VACUUM ULTRA-VIOLET

By B. EDLÉN

Department of Physics, University of Lund, Lund, Sweden

CONTENTS

	PAGE
§ 1. Introduction	181
§ 2. Recording technique	182
2.1. Spectrograph design.....	183
2.1.1. General considerations	183
2.1.2. Gratings at near normal incidence	184
2.1.3. The grazing-incidence mounting	186
2.2. Gratings for the vacuum ultra-violet.....	189
2.3. Photographic plates for the vacuum ultra-violet	190
§ 3. Light sources for vacuum ultra-violet atomic spectra	191
3.1. The hollow cathode	191
3.2. Electrodeless discharges.....	191
3.3. Arcs and sparks in transparent gases.....	191
3.4. The vacuum spark	192
§ 4. Evaluation of spectrograms	193
4.1. Measurements and wavelength calculations	193
4.2. Line identification	194
§ 5. Wavelength standards	195
5.1. Ritz standards.....	196
5.2. Wavelengths of one-electron spectra	200
Tables	202
References	211

ATMOSPHERIC TRACERS AND THE STUDY OF THE GENERAL CIRCULATION OF THE ATMOSPHERE

BY P. A. SHEPPARD
Imperial College, London

CONTENTS

	PAGE
§ 1. Introduction	214
§ 2. Atmospheric tracers and their properties	215
2.1. General	215
2.2. Individual tracers	216
§ 3. The general circulation and the associated temperature field	220
3.1. General	220
3.2. Mean zonal winds and temperatures	220
3.2.1. Sea level to 100 mb	220
3.2.2. Stratosphere and mesosphere	223
3.3. Mean meridional motion	225
3.4. Turbulence in the general circulation	227
3.5. Disturbances in the middle stratosphere and higher levels	229
§ 4. Information from tracers on tropospheric circulation	233
4.1. Vertical motion in relation to horizontal motion	233
4.2. Large-scale diffusion in the troposphere	234
4.3. Tropospheric turnover	236
4.4. Tropospheric exchange between hemispheres	239
§ 5. Information from tracers on stratospheric circulations	240
5.1. General	240
5.2. Water vapour	241
5.3. Aerosols	243
5.4. Ozone	243
5.5. Nuclear bomb debris	253
§ 6. Transfer processes in the stratosphere and between the stratosphere and troposphere	258
6.1. General	258
6.2. Meridional circulations and tracer distributions	258
6.3. Large-scale turbulence and tracer distributions	261
6.4. Transfer in the upper stratosphere and mesosphere	263
6.5. Transfer between the stratosphere and troposphere	263
Acknowledgments	264
References	265
