

## CONTENTS

	PAGE
Preface . . . . .	iv
Some recent work on ferroelectrics. By A. F. DEVONSHIRE . . . . .	1
Green functions in statistical mechanics. By W. E. PARRY and R. E. TURNER . . . . .	23
Green functions in low-energy nuclear physics. By D. J. THOULESS . . . . .	53
Devices for the detection of energetic particles. By J. A. NEWTH . . . . .	93
Matter transport in solids. By R. E. HOWARD and A. B. LIDIARD . . . . .	161
Microwave and optical masers. By J. E. GEUSIC and H. E. D. SCOVIL . . . . .	241
Volume-controlled current injection in insulators. By M. A. LAMPERT . . . . .	329
Electroluminescence. By H. K. HENISCH . . . . .	369
The theory of weak interactions. By J. C. TAYLOR . . . . .	407
The measurement of oscillator strengths in atomic spectra. By E. W. FOSTER . . . . .	469

# Some recent work on ferroelectrics

A. F. DEVONSHIRE

Physics Department, University of Bristol

## Contents

	Page
1. Plan of review . . . . .	1
2. Introduction . . . . .	3
3. Domain switching . . . . .	5
4. Perovskites and other ferroelectrics with related structures . . . . .	6
4.1. Perovskites . . . . .	6
4.2. Other ferroelectrics with oxygen octahedra . . . . .	9
5. Miscellaneous ferroelectrics . . . . .	11
5.1. Triglycine sulphate . . . . .	11
5.2. Guanidinium aluminium sulphate hexahydrate . . . . .	13
5.3. The alums . . . . .	13
5.4. Ammonium sulphate and ammonium fluoberyllate . . . . .	14
5.5. Ammonium bisulphate . . . . .	15
5.6. Sodium nitrite . . . . .	15
5.7. Potassium nitrate . . . . .	17
5.8. Thiourea . . . . .	18
5.9. Antimony sulpho-iodide . . . . .	20
References . . . . .	21

# Green functions in statistical mechanics

W. E. PARRY<sup>†</sup> AND R. E. TURNER<sup>‡</sup>

<sup>†</sup> Clarendon Laboratory, Oxford

<sup>‡</sup> Physics Laboratory, The University of Sussex, Falmer, Brighton, Sussex

## Contents

	Page
1. Introduction . . . . .	23
2. Thermodynamic perturbation theory . . . . .	24
3. Analytic properties of Green functions . . . . .	31
4. Non-perturbative calculations . . . . .	37
4.1. Equations of motion method . . . . .	37
4.2. Functional derivatives . . . . .	39
4.3. Two-particle Green functions . . . . .	40
4.4. Discussion . . . . .	41
5. Applications to specific problems . . . . .	41
5.1. The interacting fermion system . . . . .	42
5.2. Neutron scattering from liquid helium . . . . .	45
6. Relaxation phenomena . . . . .	49
Acknowledgments . . . . .	51
References . . . . .	52

# Green functions in low-energy nuclear physics†

D. J. THOULESS

Department of Applied Mathematics and Theoretical Physics,  
University of Cambridge

## Contents

	Page
1. Introduction . . . . .	53
2. Definition and formal properties of Green functions . . . . .	55
3. Perturbation theory . . . . .	61
4. Propagators in nuclear matter . . . . .	66
5. The optical model and nuclear reactions . . . . .	69
6. Two-particle Green functions and vibrations of closed shell nuclei . . . . .	73
7. Spurious states and rotational motion . . . . .	82
8. The effect of pairing . . . . .	85
Acknowledgments . . . . .	89
References . . . . .	89

# Devices for the detection of energetic particles

J. A. NEWTH

Physics Department, Imperial College, London

## Contents

	Page
1. Introduction . . . . .	94
2. Problems of high-energy particle physics . . . . .	95
2.1. Historical . . . . .	95
2.2. The particles and their interactions . . . . .	96
2.3. Conservation laws . . . . .	98
2.4. Resonances between particles . . . . .	98
2.5. Some outstanding problems . . . . .	100
3. Accelerators and their properties . . . . .	100
3.1. General . . . . .	100
3.2. Orbit stability in a circular accelerator . . . . .	102
3.3. Phase stability . . . . .	104
3.4. Electron accelerators . . . . .	106
3.5. Output from an accelerator . . . . .	107
4. The production of beams of particles . . . . .	108
4.1. The secondary particles from a target . . . . .	108
4.2. Quadrupole lenses . . . . .	109
4.3. Bending magnets . . . . .	111
4.4. Electrostatic separators . . . . .	112
4.5. Radio-frequency separators . . . . .	113
4.6. Beams of $\mu$ mesons . . . . .	115
4.7. Neutrino beams . . . . .	115
4.8. Beam alignment . . . . .	116
5. Particle detectors . . . . .	117
6. Scintillation counters . . . . .	118
6.1. Phosphor materials . . . . .	118
6.2. Fast scintillation counters . . . . .	119
6.3. The signal from a fast counter . . . . .	120
6.4. Extraction of timing information . . . . .	122
6.5. Time of flight separation of particles . . . . .	123
6.6. Miscellaneous features of fast counters . . . . .	124
6.7. Pulse amplitude measurement . . . . .	125
6.8. Pulse shape measurement . . . . .	126
7. Čerenkov counters . . . . .	127
7.1. Čerenkov light and its detection . . . . .	127
7.2. General features of Čerenkov counters . . . . .	128
7.3. Threshold counters . . . . .	128
7.4. Differential focusing Čerenkov counters . . . . .	130
7.5. Čerenkov shower detectors . . . . .	133
8. The bubble chamber . . . . .	133
8.1. Historical and general principles . . . . .	133
8.2. Some features of bubble chamber design . . . . .	135
8.3. Some aspects of the operation of bubble chambers . . . . .	137
8.4. Measurements on tracks in a bubble chamber . . . . .	139
8.5. The analysis of bubble chamber photographs . . . . .	140

	Page
9. The spark chamber . . . . .	143
9.1. Principles of operation . . . . .	143
9.2. The times involved in spark chamber operation . . . . .	144
9.3. The capabilities of spark chambers . . . . .	145
9.4. The construction and operation of spark chambers . . . . .	146
9.5. Some uses of spark chambers . . . . .	148
9.6. Analysis of spark chamber photographs . . . . .	149
9.7. Non-photographic recording of sparks . . . . .	149
10. Miscellaneous particle detectors . . . . .	150
10.1. Solid-state counters . . . . .	150
10.2. Devices using image intensifiers . . . . .	151
10.3. Radio-frequency discharge chambers . . . . .	153
10.4. Cloud chambers . . . . .	153
10.5. Nuclear emulsion . . . . .	154
11. Conclusions . . . . .	154
Acknowledgments . . . . .	156
Bibliography . . . . .	156
References . . . . .	157

# Matter transport in solids

R. E. HOWARD<sup>†</sup> AND A. B. LIDIARD<sup>‡</sup>

<sup>†</sup> National Bureau of Standards, Washington, D.C.

<sup>‡</sup> Atomic Energy Research Establishment, Harwell, Berks.

## Contents

	Page
1. Preface . . . . .	162
2. Introduction . . . . .	163
2.1. Thermally activated mechanisms . . . . .	163
2.2. Types of defect in various solids . . . . .	168
2.3. Atomistic calculations . . . . .	170
2.4. Statistical theories . . . . .	179
3. Statistical thermodynamics of crystals containing point defects . . . . .	181
3.1. Pure monatomic solids . . . . .	182
3.2. Compound solids . . . . .	186
3.3. Dilute solid solutions . . . . .	191
4. Thermodynamics of irreversible processes in solids . . . . .	197
4.1. Rate of entropy production . . . . .	197
4.2. Phenomenological laws and the Onsager theorem . . . . .	199
4.3. Transformations of fluxes and forces . . . . .	200
4.4. Linearly dependent fluxes and forces . . . . .	201
4.5. Heats of transport . . . . .	203
5. Matter transport in solids . . . . .	205
5.1. Isothermal diffusion (mainly in metals) . . . . .	205
5.2. Ionic migration in an electric field . . . . .	217
5.3. Thermal diffusion and the Soret effect . . . . .	224
5.4. Thermoelectric power of ionic crystals . . . . .	230
6. Conclusion . . . . .	234
Acknowledgements . . . . .	235
Bibliography . . . . .	235
References . . . . .	236

# Microwave and optical masers†

J. E. GEUSIC AND H. E. D. SCOVIL

Bell Telephone Laboratories Incorporated, Murray Hill, New Jersey, U.S.A.

## Contents

	Page
1. Introduction . . . . .	242
2. Methods of obtaining inverted populations . . . . .	244
2.1. Inversion by multi-level pumping . . . . .	244
2.2. Inversion by state separation . . . . .	246
3. The theory of maser gain and noise . . . . .	248
3.1. The maser medium . . . . .	249
3.2. The radiation field . . . . .	249
3.3. Interaction of the radiation field and the maser medium . . . . .	252
3.4. Maser gain and noise . . . . .	254
4. Microwave solid state masers . . . . .	257
4.1. Energy levels . . . . .	258
4.2. Relaxation processes . . . . .	261
4.3. General considerations and maser materials . . . . .	263
4.4. Microwave maser amplifiers . . . . .	272
4.5. Summary . . . . .	279
5. Optical masers . . . . .	279
5.1. Interferometers and transmission line analogues . . . . .	280
5.2. Optical maser amplification . . . . .	283
5.3. Optical maser oscillator . . . . .	285
5.4. Steady state pumping of optical masers . . . . .	288
5.5. Optical maser material requirements . . . . .	300
5.6. Solid state optical masers . . . . .	301
5.7. Gaseous optical masers . . . . .	314
5.8. Applications . . . . .	321
6. Extension of the maser spectrum . . . . .	322
Acknowledgments . . . . .	323
References . . . . .	323

# Volume-controlled current injection in insulators†

M. A. LAMPERT

RCA Laboratories, Princeton, New Jersey, U.S.A.

## Contents

	Page
1. Introduction . . . . .	329
1.1. Conceptual basis . . . . .	329
1.2. Role in solid-state research . . . . .	332
1.3. Technological applications . . . . .	334
2. One-carrier injection: space-charge-limited currents . . . . .	335
2.1. Derivation of current-voltage characteristics . . . . .	335
2.2. Experimental results . . . . .	343
2.3. Transient space-charge-limited currents . . . . .	346
3. Two-carrier injection . . . . .	349
3.1. General remarks . . . . .	349
3.2. Injected plasmas . . . . .	351
3.3. Double injection with trapping . . . . .	356
Acknowledgments . . . . .	364
References . . . . .	364

# Electroluminescence

H. K. HENISCH

Materials Research Laboratory, Pennsylvania State University

## Contents

	Page
1. Introduction . . . . .	369
2. Storage and recombination processes . . . . .	372
2.1. Time-dependent relationships . . . . .	372
2.2. Spectral characteristics of electroluminescent emission . . . . .	373
3. Radiative surface recombination . . . . .	377
4. Activator excitation by impact . . . . .	378
4.1. Collision processes . . . . .	378
4.2. Provision of free carriers . . . . .	380
4.3. Field enhancement . . . . .	381
5. Location of the emission sources . . . . .	382
6. Injection electroluminescence . . . . .	385
6.1. General . . . . .	385
6.2. Zinc sulphide phosphors . . . . .	387
6.3. Intermetallic compounds . . . . .	389
6.4. Tunnel injection electroluminescence . . . . .	392
7. Electroluminescence in cadmium sulphide single crystals . . . . .	393
8. Luminescence due to intraband relaxation . . . . .	394
9. Photocapacitive phenomena . . . . .	395
10. Special problems of powder phosphors . . . . .	396
11. Junction lasers . . . . .	398
Acknowledgments . . . . .	402
References . . . . .	402

# The theory of weak interactions†

J. C. TAYLOR

Department of Applied Mathematics and Theoretical Physics,  
University of Cambridge

## Contents

	Page
1. Introduction . . . . .	408
2. Invariance properties . . . . .	410
3. Properties of leptons in weak interactions . . . . .	413
3.1. Lepton conservation . . . . .	413
3.2. The neutrinos . . . . .	414
3.3. The weak interactions of electrons and muons . . . . .	415
3.4. Muon decay . . . . .	418
4. Interactions of leptons with nucleons and pions . . . . .	419
4.1. Neutron beta decay . . . . .	420
4.2. Beta decay of nuclei . . . . .	423
4.3. The conserved vector current theory . . . . .	425
4.4. Pion decay . . . . .	429
4.5. Muon capture . . . . .	430
5. Leptonic decays of hyperons and kaons . . . . .	434
5.1. Leptonic decays of hyperons . . . . .	434
5.2. Leptonic decays of kaons . . . . .	435
5.3. Properties of the weak currents . . . . .	438
6. Non-leptonic decays . . . . .	438
6.1. Pionic decays of kaons . . . . .	439
6.2. The neutral kaon beam . . . . .	443
6.3. Hyperon decays . . . . .	445
6.4. The quantum numbers of the weak Hamiltonian . . . . .	448
7. Electromagnetic corrections . . . . .	448
8. Neutrino-induced reactions . . . . .	450
9. Neutrinos in astrophysics . . . . .	453
9.1. Neutrino emission by stars . . . . .	453
9.2. Neutrinos in cosmology . . . . .	454
10. Speculative theories . . . . .	455
10.1. Current-times-current theories . . . . .	455
10.2. Higher symmetries . . . . .	456
10.3. Dispersion relations . . . . .	458
10.4. Partially conserved currents . . . . .	459
10.5. Intermediate vector bosons . . . . .	460
Acknowledgment . . . . .	464
References . . . . .	464

# The measurement of oscillator strengths in atomic spectra

E. W. FOSTER

University of London Observatory

## Contents

	Page
1. Introduction . . . . .	470
1.1. Radiation intensity . . . . .	470
1.2. The atomic radiation constants . . . . .	472
1.3. Absorption coefficient, optical thickness, emission coefficient . . . . .	476
1.4. Scope of report . . . . .	479
1.5. Bibliography . . . . .	479
2. Measurement of lifetimes of discrete states . . . . .	480
2.1. Direct observations of decay of electrically or optically excited atomic beams . . . . .	480
2.2. Phase shift techniques . . . . .	481
2.3. Delayed coincidence methods . . . . .	483
3. Measurement of transition probabilities of discrete states . . . . .	485
3.1. Utrecht arc methods for relative transition probabilities . . . . .	486
3.2. Other arc methods (relative and absolute) . . . . .	487
3.3. Absolute measurements with the Kiel arcs . . . . .	491
3.4. Luminous shock tubes . . . . .	500
4. Measurement of oscillator strengths of discrete states . . . . .	504
4.1. The curve of growth technique . . . . .	504
4.2. Atomic beam absorption methods—a specific example of a curve of growth . . . . .	505
4.3. Absorption methods—the King-furnace observations . . . . .	509
4.4. Dispersion and anomalous dispersion: Rozhdestvenskii's hook method . . . . .	512
5. Some special methods for discrete states . . . . .	519
5.1. Magneto-optic rotation method . . . . .	520
5.2. Use of isotope shift measurements . . . . .	520
5.3. Use of ordinary dispersion measurements . . . . .	520
5.4. Transition probabilities from auroral observations . . . . .	521
5.5. Use of stellar spectra . . . . .	521
6. Auto-ionizing lines and transitions involving inner-shell electrons . . . . .	522
6.1. Beutler notation . . . . .	522
6.2. Auto-ionization . . . . .	523
6.3. Background continua for vacuum ultra-violet absorption spectroscopy . . . . .	524
6.4. Measurements and problems relating to auto-ionizing lines . . . . .	524
7. Measurements of continuous spectra . . . . .	531
7.1. Photo-ionization continua . . . . .	531
7.2. Recombination spectra . . . . .	537
7.3. Negative ion spectra . . . . .	542
Acknowledgments . . . . .	545
References . . . . .	545
