Sense organs—transducers of the environment. C. RASHBASS	375
The solar wind. D. B. BEARD	409
Physical contributions to the determination of biological structure and function. W. FULLER	445
Recombination emission in inorganic solids. G. F. J. GARLICK	491
Superconducting magnets. P. F. CHESTER	561
The theory of equilibrium critical phenomena. M. E. FISHER	615
Experimental investigations of critical phenomena. P. HELLER	731

Sense organs—transducers of the environment

C. RASHBASS

Institute of Psychiatry, The Maudsley Hospital, University of London

Contents

	Page
1. Introduction	376
2. The generation of nerve impulses	377
3. The receptor potential.	379
4. The primary transducer action	383
4.1. Mechanically sensitive receptors.	383
4.2. Light-sensitive receptors	385
4.3. Chemically sensitive receptors	386
5. Non-nervous structures ancillary to the receptors	386
5.1. The Pacinian corpuscle	386
5.2. The eye	387
5.3. The ear	388
5.4. The vestibular apparatus	390
6. Stimulus-response relations	392
7. Temporal properties of sense organs	394
7.1. Adaptational properties	394
7.2. Resolution and summation	398
8. Spatial properties	398
9. Spatio-temporal interaction	399
10. Colour vision	399
11. Noise	401
12. The central nervous control of sense organs	402
12.1. Feedback	402
12.2. General central control	403
13. Conclusion	404
Glossary of biological terms	404
References	405

The solar wind

D. B. BEARD†

Imperial College of Science and Technology, London

Contents

	Page
1. Introduction	409
2. Origin of the solar wind	411
3. The interface between the solar wind and the geomagnetic field	414
4. Pressure balance at the boundary	419
5. Approximate methods for calculating the surface	422
5.1. The method of the self-consistent field	422
5.2. The multi-pole field expansion of Midgley and Davis	426
5.3. The free-boundary solution of Slutz	427
6. The deformation of the geomagnetic field by the solar wind	429
7. Perturbations of the simple model	434
8. Interaction of the solar wind with cosmic rays and comets	440
Acknowledgments	442
References	443

Physical contributions to the determination of biological structure and function

W. FULLER

Department of Biophysics, University of London King's College, 26–29 Drury Lane, London

Contents

	Page
1. Introduction	446
2. Electron microscopy	447
2.1. Introduction	447
2.2. Superposition techniques	449
2.3. Optical diffraction patterns of electron micrographs	449
3. X-ray diffraction	451
3.1. Introduction	451
3.2. Structural analysis of globular proteins	452
3.3. Fibrous structure	458
4. Macromolecular conformation	463
4.1. General considerations	463
4.2. Nucleic acid structure	466
4.3. Protein structure	468
4.4. Conformational analysis	475
5. Self-assembly of biological structures	476
6. Biological function	481
7. Conclusions	487
Acknowledgments	488
References	488

Recombination emission in inorganic solids

G. F. J. GARLICK

Department of Physics, University of Hull

Contents

	Page
1. Introduction	492
1.1. Historical survey	492
1.2. Recombination emission processes in outline	492
1.3. Types of solid investigated for recombination emission	493
2. Some theoretical mechanisms for recombination radiation processes	493
2.1. Recombination of electrons and positive holes by band-to-band transitions	494
2.2. Exciton formation and recombination emission	499
2.3. 'Edge' emission	500
2.4. Recombination via defects and impurities	501
2.5. Excitation processes leading to recombination emission	505
3. Experimental studies of recombination radiation	515
3.1. Monatomic solids (and silicon carbide)	515
3.2. Recombination emission in some III-V compounds	526
3.3. Recombination emission in II-VI compounds	537
3.4. Recombination emission in lead salts and related compounds	547
4. Discussion of some current topics	553
4.1. Laser action and stimulated emission in semiconductors	553
4.2. The problem of injection emission in high-band-gap semiconductors	554
References	556

Superconducting magnets

P. F. CHESTER†

Electricity Council Research Centre, Capenhurst, Chester

Contents

	Page
1. Introduction	561
2. The development of 'high-field' superconductors	562
3. Early experience with superconducting coils	566
4. Current transport in non-ideal type II superconductors	571
5. Thermal instabilities	578
6. The origin of 'degradation' and 'training'	581
7. Stabilization	586
7.1. Improvements in adiabatic stability	586
7.2. Dynamic stability	587
7.3. Cryostatic stabilization	588
8. Composite conductors	594
9. Engineering aspects	597
9.1. Mechanical construction	597
9.2. Current supply	599
9.3. Protection	601
9.4. Conductor optimization	606
10. The present position	607
Acknowledgments	610
References	610

The theory of equilibrium critical phenomena

M. E. FISHER

Baker Laboratory, Cornell University, Ithaca, New York, U.S.A.

Contents

	Page
1. Introduction	616
1.1. Phases and critical points	616
1.2. The task of theory	619
1.3. Basis in statistical mechanics	620
1.4. Critical-point exponents	623
2. Survey of phenomena and analogies	624
A. Fluid systems	624
2.1. Gas-liquid critical point	624
2.2. Critical scattering	627
2.3. Fluid correlations and fluctuations	629
B. Magnetic systems	632
2.4. Ferromagnets	632
2.5. Magnetic scattering	634
2.6. Antiferromagnets	637
C. Other systems	639
2.7. Binary fluids and alloys	639
2.8. Superfluid helium	640
2.9. Superconductors, ferroelectrics, etc.	642
3. Exponent inequalities	643
3.1. Stability and convexity	644
3.2. Inequality for α' , β and γ'	644
3.3. Inequality for δ and use of convexity	646
4. Models and analogies	648
4.1. Lattice gases	648
4.2. Ising-Heisenberg model and equivalences	651
4.3. Quantal fluid-magnet analogies	654
5. Phenomenological and mean field theories	658
5.1. Phenomenological approach for thermodynamic functions	659
5.2. Phenomenological approach for correlation functions	661
5.3. Mean field theory	663
5.4. Validity of classical theories	664
6. Analytic theory of the Ising model	667
6.1. Exact thermodynamic results	667
6.2. Exact results for the correlations	673
6.3. Scaling of correlations and relation for γ , ν and η	675
7. Use of exact series expansions	677
7.1. Derivation of expansions	677
7.2. Ratio method	681
7.3. Padé approximants	687
8. Survey of numerical results	691
8.1. Ising model	691
8.2. Heisenberg model	698
9. Theory of exponents	702
9.1. Droplet or cluster model	703
9.2. Homogeneity arguments	708
9.3. Correlation exponent relations	711

	Page
9.4. Complete scaling of the correlations	714
9.5. Summary	717
10. Conclusions and outlook	718
10.1. Equilibrium phenomena	718
10.2. Non-equilibrium phenomena	721
Acknowledgments	723
References	723
Fold-out table of critical exponents	<i>Facing page</i> 730

Experimental investigations of critical phenomena†

P. HELLER

Physics Department, Brandeis University, Waltham, Massachusetts, U.S.A.

Contents

	Page
1. Introduction and survey of the basic facts	732
1.1. Preface	732
1.2. Liquid–vapour systems	732
1.3. Binary liquid mixtures	737
1.4. Magnetic critical phenomena	739
1.5. Other systems	742
1.6. Remarks on the presentation and analysis of experimental data	743
1.7. Theoretical values for the critical indices and coefficients .	744
2. Static measurements in fluids and binary mixtures	745
2.1. General problems	745
2.2. <i>PVT</i> measurements on fluids: the effect of gravity	745
2.3. The refractive index against height technique: critical pheno- mena in carbon dioxide	747
2.4. The coexistence curve of ^4He	751
2.5. A summary of data on liquid–vapour systems	755
2.6. Binary fluid mixtures	759
3. Static measurements in magnetic systems	764
3.1. General problems	764
3.2. Bulk measurements on ferromagnets	765
3.3. Microscopic measurements on ferromagnets and antiferro- magnets	771
3.4. A summary of data on magnetic systems	781
4. Specific-heat measurements near the critical point	785
4.1. Liquid–vapour systems	785
4.2. Magnetic systems	789
4.3. Other systems	792
5. Critical scattering experiments	794
5.1. Pure fluids and binary mixtures	794
5.2. Neutron scattering in magnetic systems	806
5.3. Beta-brass	818
6. Other phenomena and experiments	820
6.1. Liquid ^4He at the lambda point	820
6.2. Superconducting transitions	821
6.3. Other topics	821
7. Conclusions	822
Acknowledgments	822
References	823
