REPORTS ON PROGRESS IN PHYSICS

VOLUME 32, PART 2

1969

Ion bombardment and implantation

G. DEARNALEY

Atomic Energy Research Establishment, Harwell, Didcot, Berks.

Contents

	Page
1. Introduction	406
2. The interatomic potential	407
3. Ion penetration and channelling	410
3.1. Electronic stopping	411
3.2. Nuclear stopping	413
3.3. Experimental measurement of energy loss	414
3.4. Range theory	417
3.5. Experimental measurements of ion range	420
3.6. Ion penetration in crystal lattices: channelling	425
4. Radiation damage	435
4.1. Introduction	435
4.2. Defect production	435
4.3. Distribution of defect production	438
4.4. Migration and annealing of defects	444
4.5. Bubble formation and gas release	450
5. Sputtering	453
5.1. Sputtering in non-crystalline targets	453
5.2. Sputtering in single-crystal targets	456
5.3. Surface topography of ion-bombarded specimens	459
6. Secondary electron emission	460
6.1. Secondary electron emission from single crystals	464
7. Ion implantation	466
7.1. Introduction	466
7.2. Advantages of ion implantation	467
7.3. Some problems in the ion implantation of semiconductors	468
7.4. Ion-implanted semiconductor devices	474
7.5. Equipment for ion implantation	478
7.6. The future of ion implantation	481
Acknowledgments	485
References	485

Green functions in particle physics

M. M. BROIDO

Magdalen College, University of Oxford

Contents

	Page
1. Introduction	493
2. The Bethe–Salpeter equation and its applications	500
2.1. The Bethe–Salpeter equation	500
2.2. Nucleon–nucleon scattering in the 3P_1 state	506
2.3. Bound states	507
2.4. Pion–nucleon scattering and the N–N * reciprocal bootstrap	511
2.5. Pion–pion scattering and the ρ bootstrap	515
2.6. Quark model	516
2.7. Regge pole model	520
2.8. Methods for solving the Bethe–Salpeter equation	522
2.9. Outlook on the Bethe–Salpeter equation	529
3. Towards a Green function theory of particle dynamics	530
3.1. Green functions for elementary particles	530
3.2. Multiparticle structure of Green functions	533
3.3. Bethe–Salpeter equations and three-particle equations	538
3.4. Outlook on Green functions	541
References	542

Hadron-nucleon total cross sections at high energies

W. GALBRAITH

Department of Physics, University of Sheffield

Contents

	Page
1. Introduction	547
2. The measurement of total cross sections	551
2.1. Experimental methods	551
2.2. Corrections to measurements	555
2.3. Cross sections for pure isospin states	565
3. Meson-nucleon total cross sections	566
3.1. Pions	566
3.2. Kaons	572
4. Nucleon and anti-nucleon total cross sections on nucleons	577
4.1. Protons	577
4.2. Neutrons	580
4.3. Anti-nucleons	582
5. Theoretical implications	585
5.1. Resonances and Regge poles	586
5.2. Relative total cross sections, and asymptotic limits	592
5.3. Forward scattering amplitudes and total cross sections	600
6. Conclusions	602
Acknowledgments	603
References	604

Inelastic collisions of hadrons and the multi-Regge model

CHAN HONG-MO

C.E.R.N. (European Organization for Nuclear Research), Geneva, Switzerland

Contents

	Page
1. Introduction	607
2. The multi-Regge model in theory	608
3. The multi-Regge model in practice	611
4. Description of experimental data	614
4.1. General picture for πp reactions	614
4.2. Elaborations of the picture	621
4.3. Other reactions	622
4.4. Dependence on quantum numbers	622
5. Consistency with unitarity	628
6. Brief summary of recent developments	629
6.1. Methods for data analysis	629
6.2. Computational techniques	629
6.3. Dynamical models	630
6.4. Consistency with unitarity	630
Acknowledgments	630
References	630

Group theory and magnetic phenomena in solids

A. P. CRACKNELL

Department of Physics, University of Essex, Wivenhoe Park, Colchester, Essex

Contents

	Page
1. Magnetic crystals and the Shubnikov groups	633
2. The tensor properties of magnetic crystals: I—Macroscopic static properties	643
3. The Brillouin zones of magnetic crystals	645
4. Anti-unitary operations and the corepresentations of the magnetic groups	649
5. Magnetic point groups	654
6. Magnetic space groups; symmetries of magnons; band structure of magnetic metals	656
7. Group theory and magnetic phase transitions	663
8. Spontaneous currents and superconductivity	667
9. The Kronecker products of corepresentations	670
10. Crystal field theory in magnetic crystals	672
11. Space-group selection rules in magnetic crystals	679
12. The tensor properties of magnetic crystals: II—Transport properties and microscopic properties	685
13. Spin space groups	694
14. The symmetries of paramagnons	699
15. Polychromatic groups	702
Acknowledgments	704
References	706

The growth of the literature of physics

L. J. ANTHONY, H. EAST AND M. J. SLATER

Aslib, London

Contents

	Page
1. Introduction	709
2. The growth of the literature of physics	711
2.1. The size of the scientific literature	711
2.2. The literature of physics	713
2.3. Geographical origin of the physics literature	718
2.4. Growth points in physics	722
2.5. Report literature in physics	723
2.6. Review literature in physics	727
2.7. Problems arising from limitations on growth	727
3. Physicists as consumers of information and literature	731
3.1. Physics and physicists tentatively redefined by survey results	731
3.2. How physicists acquire and use information and literature	742
4. The evolution of information services	757
4.1. Computers and primary publications	757
4.2. Current awareness services	758
4.3. Information retrieval	760
4.4. Co-operative international services	761
4.5. The development of abstract services	762
4.6. Social consequences of the growth of the literature	763
Appendix 1. <i>Physics Abstracts</i> output, 1920-68	764
Appendix 2. Journals producing 60% of the abstracts in <i>Physics Abstracts</i> in 1964	765
References	766
