Articles Planned for Future Volumes	vii
Preface	ix

Methods of the One-Electron Theory of Solids

JOHN R. REITZ, *Case Institute of Technology, Cleveland, Ohio*

I. Introduction	2
II. The Fock Equation	3
III. Historical Survey of the One-Electron Method	15
IV. General Properties of Crystal Orbitals.	18
V. Brillouin Zones	26
VI. The Mathieu Problem and Energy Bands in Crystals	38
VII. The Tight Binding Method.	46
VIII. The Cellular Method	61
IX. Variational Methods for Periodic Lattices	75
X. The Orthogonalized Plane-Wave Method.	79
XI. Other Crystal Orbital Methods	84
XII. The Heitler-London Method	88
XIII. Exchange Interaction in the One-Electron Approximation	92

Qualitative Analysis of the Cohesion in Metals

EUGENE P. WIGNER, *Princeton University, Princeton, New Jersey*, AND FREDERICK SEITZ, *University of Illinois, Urbana, Illinois*

I. Introduction	97
II. Preliminary Observations.	99
III. The Structure and Width of Separated <i>p</i> and <i>d</i> Bands.	107
IV. Overlapping Bands	116
V. Interpretation of the Cohesive Energies of Metals.	119
VI. Summary	123
Appendix: Calculation of the Hole Energies.	123

The Quantum Defect Method

FRANK S. HAM, *Department of Physics, University of Illinois, Urbana, Illinois*

I. Introduction	127
II. The One-Electron Potential and the Hartree-Fock Equation	130
III. Fundamental Features of the Quantum Defect Method—the Work of Kuhn and Van Vleck	136
IV. Calculation of Energy Bands with QDM.	140

V. Proof of the Sufficiency of the Assumptions of QDM	144
VI. The Extrapolated Quantum Defect and the WKB Justification of QDM	150
VII. Extrapolation at Low Energies—the η -Defect	157
VIII. Corrections for Core Polarization, Overlap, and Valence Electron Interaction in Multivalent Atoms	165
IX. Correlation and Exchange Interaction Between Valence and Core Electrons	169
X. Quantum Defect Data for the Alkali Metals	174
XI. Results of Band Calculations with QDM for the Alkali Metals	184
XII. Acknowledgment	190
Appendix: Solutions of the Hydrogenic Wave Equation	190

The Theory of Order-Disorder Transitions in Alloys

TOSHINOSUKE MUTO, *Institute of Science and Technology, University of Tokyo, Japan*, AND YUTAKA TAKAGI, *Tokyo Institute of Technology, Tokyo, Japan*

I. Introduction	194
II. Theory of the Order-Disorder Transition in Alloys	205
III. Influence of Order on Electrical Properties	252
IV. Influence of Order-Disorder on Magnetic Properties	261
V. Influence of Order on Mechanical Properties	272
VI. Concluding Remarks	281

Valence Semiconductors, Germanium and Silicon

H. Y. FAN, *Purdue University, Lafayette, Indiana*

I. Elements of Semiconductor Theory	284
II. Properties of the Crystal	291
III. Conduction Phenomena	321
IV. Recombination and Trapping of Carriers	354

Electron Interaction in Metals

DAVID PINES, *Palmer Physical Laboratory, Princeton University, Princeton, New Jersey*

I. Introduction	368
II. The Collective Description of Electron Interaction	376
III. The Influence of Electron Interactions on Various Metallic Properties	407
IV. The Excitation of Plasma Oscillations in Solids	429
V. The Electron-Lattice Interaction	441
VI. Conclusion	449
