

Contents

Contributors to Volume 5	v
Preface	vii
Contents of Previous Volumes	xi
Articles Planned for Future Volumes	xiii
Galvanomagnetic and Thermomagnetic Effects in Metals	
J.-P. JAN, <i>Laboratoire Suisse de Recherches Horlogères, Neuchâtel, Switzerland</i>	
I. Phenomenological Theory	3
II. Magnetoresistance and Hall Effect	15
III. Thermal Conductivity in a Magnetic Field	54
IV. Other Effects	61
V. Galvanomagnetic and Thermomagnetic Effects in Ferromagnetics	66
VI. Special Effects	85
Luminescence in Solids	
CLIFFORD C. KLICK AND JAMES H. SCHULMAN, <i>U. S. Naval Research Laboratory, Washington, D. C.</i>	
I. Introduction	97
II. Luminescence Involving Absorption and Emission Processes in Simple Centers	99
III. Luminescence Involving Energy Transfer with No Movement of Charge	119
IV. Luminescence in Systems Involving Transfer of Charge	144
Space Groups and Their Representations	
G. F. KOSTER, <i>Massachusetts Institute of Technology, Cambridge, Massachusetts</i>	
I. Nature and Properties of the Space Groups	174
II. Irreducible Representations of Space Groups	211
III. Examples	224
IV. Double Groups	238
V. Time Reversal	249
VI. History	252
Shallow Impurity States in Silicon and Germanium	
W. KOHN, <i>Carnegie Institute of Technology, Pittsburgh, Pennsylvania</i>	
I. Introduction	258
II. Empirical Properties	261
III. Structure of Donor States	271
IV. Structure of Acceptor States	297
V. Effects of Strains and of Static Electric and Magnetic Fields	306

Quadrupole Effects in Nuclear Magnetic Resonance Studies of Solids

M. H. COHEN AND F. REIF, *Institute for the Study of Metals, University of Chicago, Chicago, Illinois*

I. Introduction	322
II. The Nuclear Electric Quadrupole Hamiltonian	326
III. Spectra in High Fields	333
IV. Field Gradients	345
V. Static Line Broadening	365
AUTHOR INDEX	439
SUBJECT INDEX	448
