

## Contents

CONTRIBUTORS TO VOLUME 25.....	vii
PREFACE.....	ix
CONTENTS OF PREVIOUS VOLUMES.....	xi
SUPPLEMENTARY MONOGRAPHS.....	xvi
ARTICLES TO APPEAR SHORTLY.....	xvii

### Surface States

S. G. DAVISON AND J. D. LEVINE

I. Introduction.....	2
II. Brief Historical Review.....	3
III. Crystal Orbital Methods.....	5
IV. Crystal Potential Methods.....	31
V. Three-Dimensional Calculations.....	75
VI. Semiclassical Methods.....	80
VII. Comparison between Theory and Experiment.....	88
VIII. Concluding Remarks.....	148
List of Abbreviations.....	149

### Crystal Growth Mechanisms: Energetics, Kinetics, and Transport

R. L. PARKER

Introduction.....	152
I. Thermodynamics of Phase Changes: Phenomenology of the Problem.....	155
II. Statistical Mechanics of Crystal Growth: Theoretical Physics of the Problem.....	161
III. Stefan Problem: Mathematical Physics of Crystal Growth Transport Processes.....	170
IV. Nucleation.....	197
V. Interface Structures and Interface Kinetics.....	208
VI. Morphological Stability.....	253
VII. Effects of Impurities on Crystal Growth Mechanisms.....	272
VIII. Fluid Flow Effects.....	284

**Thermoelastic Theory of Stressed Crystals and Higher-Order Elastic Constants**

DUANE C. WALLACE

I. Introduction .....	302
II. Thermoelasticity of Stressed Materials .....	305
III. Expansions for Small Initial Stress .....	336
IV. Crystal Symmetry Properties .....	347
V. Measurement of Third-Order Elastic Constants .....	363
VI. Fourth-Order Elastic Constants of Cubic Crystals .....	380
VII. Interpretation of Measurements in Terms of Atomic Theories .....	391
 AUTHOR INDEX .....	 405
 SUBJECT INDEX .....	 415
