

## Contents

CONTRIBUTORS .....	vii
PREFACE .....	ix

### Modeling Tetrahedrally Bonded Random Networks by Computer

F. WOOTEN AND D. WEAIRE

I. A Short History of Random-Network Models .....	2
II. Computer Generation of Continuous Random-Network Models with Periodic Boundary Conditions .....	11
III. Results .....	24
IV. Conclusion .....	37
Appendix A. The Radial Distribution Function .....	39

### A Quantum-Mechanical Critique of the Miedema Rules for Alloy Formation

D. G. PETTIFOR

I. The Miedema Scheme .....	43
II. The Nature of the Metallic Bond .....	53
III. Significance of the Miedema Parameters .....	87

### Electronic Shell Structure and Metal Clusters

WALT A. DE HEER, W. D. KNIGHT, M. Y. CHOU, AND MARVIN L. COHEN

I. Development of Cluster Physics .....	94
II. Basic Electronic Shell Theory of Metal Clusters .....	98
III. Production and Detection of Metal Clusters .....	117
IV. Cluster Abundance Spectra and Shell Structure .....	130
V. Static Dipole Polarizability .....	144
VI. Ionization Potential .....	152
VII. Prospects for Metal-Cluster Physics .....	164
Appendix A. Applications of Nilsson Theory for Clusters .....	170
Appendix B. Fine Structure in Cluster Abundance Spectra .....	175

**Stage Ordering in Intercalation Compounds**

S. A. SAFRAN

I. Staging: Modulated Structure and Properties .....	183
II. Mechanisms of Stage Ordering .....	206
III. Staging Transitions .....	214
IV. Domains and Staging Kinetics .....	233

**Experimental Studies of the Structure and Dynamics of Molten Alkali and Alkaline Earth Halides**

ROBERT L. MCGREEVY

I. Introduction .....	247
II. Structure .....	247
III. Dynamics: Inelastic Neutron Scattering .....	269
IV. Dynamics: Light Scattering .....	301
V. Conclusions .....	322
 AUTHOR INDEX .....	 327
SUBJECT INDEX .....	337
