PREFACE	vii

Beyond Pair Potentials in Elemental Transition Metals and Semiconductors

A. E. CARLSSON

I. Introduction	1
II. Theoretical Justification and Physical Properties of Interatomic Potentials and Functionals	16
III. Fitted Potentials and Functionals: Implementations and Applications	64
IV. Concluding Comments	90
Acknowledgments	91

Continuous Symmetries and Broken Symmetries in Multivalley Semiconductors and Semimetals

M. RASOLT

I. Introduction	94
II. Isospin Space and the Effective-Mass Hamiltonian	95
III. Symmetry-Breaking Terms in the Effective-Mass Hamiltonian	114
IV. Isospin Space and the Integer Quantum Hall Effect	132
V. Isospin Space and the Fractional Quantum Hall Effect	156
VI. Isospin in Three Dimensions	182
Acknowledgments	223
Appendix A	223
Appendix B	226

Dynamic Screening of Ions in Condensed Matter

P. M. ECHENIQUE, F. FLORES, R. H. RITCHIE

I. Introduction	230
II. Quantal Self-Energy of a Projectile in an Electron Gas	236
III. Linear Theory of the Interaction of a Probe with Condensed Matter	250
IV. Wake Effects on Ion and Molecular Ion Penetration in Condensed Matter	267
V. Ions Moving with Velocity Less Than v_0	275
VI. Charge States of Ions in a Solid	287
VII. Summary	306
Acknowledgments	308
AUTHOR INDEX	309
SUBJECT INDEX	319
