

Contents

Preface	v
I. Introduction.	1
1. The Transition Groups	1
2. Resonance Conditions.	4
3. Fine Structure.	5
II. Theory of the Crystalline Field	8
4. General Hamiltonian of the "Free Ion".	8
5. Effect of Static Crystalline Field. Outline of Calculations.	11
6. Kramer's Theorem	34
7. Jahn-Teller Effect	37
8. The Spin Hamiltonian.	39
9. Angular Variation of the Spectrum	52
10. Hyperfine Structure.	58
11. Direct Observation of Nuclear Magnetic Resonance via the Electron Spin Resonance.	67
12. The Determination of the Sign of D , A , Q' , and γ	71
III. Paramagnetic Resonance Spectra of the Transition Elements in Single Crystals	76
13. Paramagnetic Resonance Spectra of the Iron Group.	76
14. Covalent Bonding in the Iron Group	97
15. Optical Spectra of the Iron Group	103
16. Energy Levels of Strongly Covalent Complexes.	106
17. The Cyanide Group.	108
18. The Palladium and Platinum Groups	111
19. S -State Ions.	113
a. Introduction.	113
b. Energy Levels.	114
c. Spin Hamiltonian	116
d. Experimental Results and Theoretical Considerations.	118
e. Anomalous Hyperfine Structure	122
20. The Rare Earth Group	123
a. Introduction.	123
b. Theoretical Aspects of the Paramagnetic Resonance Spectrum.	124
c. Results of Paramagnetic Resonance Measurements.	128
d. Ions with an Even Number of Electrons	135

21. Paramagnetic Resonance Spectra of the Actinide Group	137
a. Introduction.	137
b. Uranyl Ions.	139
c. Neptunyl Ions.	141
d. Plutonyl Ions	144
e. f^n Configurations.	145
IV. Relaxation Times and Line Width	146
22. Spin-Lattice Relaxation Time	149
23. Dipolar Broadening.	153
24. Exchange Interaction.	155
25. Methods of Measuring Relaxation Times	159
a. Other Sources of Broadening	159
b. Measurements of T_2	160
c. Measurement of T_1	160
26. Solid State Maser.	162
a. Pulsed Systems	165
b. Adiabatic Fast Passage.	165
c. Multilevel Scheme.	166
V. Paramagnetic Resonance of Color Centers and Defects in Crystals . .	170
27. Color Centers	170
a. F Centers.	170
b. V Centers.	173
28. Electron Spin Resonance of Irradiated Crystals (Other Than Alkali Halides).	175
a. Spectrum of Hydrogen Atoms.	175
b. Irradiated Nitrate Salts.	175
c. Irradiated Diamonds, Quartz, and Other Crystals	176
d. Organic Substances.	176
e. Plastics.	177
f. Resonance from Donors in Semiconductors	177
VI. Paramagnetic Resonance Spectrometers	180
29. Sensitivity Considerations.	180
a. Frequency Considerations.	181
b. Choice of Cavity.	182
c. Modulation Frequency	184
d. Detection Methods.	186
30. Practical Spectrometers.	190
a. Simple Reflection or Transmission Spectrometer.	190
b. Superheterodyne Spectrometer.	191
c. Electron Nuclear Double Resonance (ENDOR) Spectrometer . . .	193
AUTHOR INDEX	195
SUBJECT INDEX	200
INDEX OF COMPOUNDS	211
