

Contents

<i>Preface</i>		v
<i>List of Symbols</i>		xi
I. Introduction		1
II. Survey of High-Field Effects		7
1. Effect of High Fields on the Velocity Distribution of the Carriers		7
2. Mobility in High DC Fields		15
3. High-Frequency Conductivity in High Fields		34
4. "Thermoelectric Effect" of Hot Carriers		45
5. Effects Peculiar to the Many-Valley Band Structure		49
6. Effects Peculiar to p-Ge		59
7. Effects Due to a Magnetic Field Superimposed on a High Electric Field		72
8. Negative Resistivity and the Gunn Effect		80
9. Miscellaneous Effects		99
III. Interaction of the Carriers with the Scattering Mechanisms		105
1. The Momentum Relaxation Time for Acoustic Scattering: The Simple Model		105
2. The Momentum Relaxation Times for Acoustic Mode Scattering: The Many-Valley Model		112
3. The Zero Point Lattice		116
4. Rate of Energy Loss to Acoustic Modes: Simple and Many-Valley Models		119
5. Disturbance of the Phonon Distribution by the Hot Carriers		127
6. Optical Mode and Intervalley Scattering		149
IV. Some Comparisons of Theory with Experiment		161
1. Deductions from Conservation of Energy		161
2. Mobility Variations in Germanium		165
3. The Region of Constant Drift Velocity and the Anisotropy in n-Ge		187
4. Polar Semiconductors		197
5. Microwave Conductivity in High DC Fields		204

V. Formulation and Solution of the Boltzmann Equation ..	210
1. General Considerations	210
2. Collision Operator for Acoustic Modes	218
3. Collision Operator for Optical and Intervalley Scattering	221
4. Solutions for Acoustic Mode Interactions Only	225
5. Solutions for Acoustic and Optical Mode Interactions; Application to n-Ge	231
6. The Coupled Equations for Carrier and Phonon Distributions; Solution for Small Disturbances	238
7. Solution for Polar Optical and Intervalley Scattering; Application to GaAs	248
8. Treatment of Impurity Scattering and Electron-Electron Interactions ..	266
9. Microwave Conductivity in High DC Fields	272
10. Electromotive Force Due to an Electric Field Gradient	276
 <i>Author Index</i>	 283
<i>Subject Index</i>	288
