

Contents

<i>Foreword</i>	v
<i>Preface</i>	vii
I. Introduction and Historical Survey	1
II. Optical Properties of Electrons in Solids		
1. Introduction	9
2. One-Electron Model	10
3. Intraband Effects	14
4. Critical Points and Direct Transitions	15
5. Indirect Transitions	23
6. Excitons	25
7. Broadening	47
8. Experimental Techniques	55
9. Assignment of Optical Structure to Interband Critical Points	65
III. Modulation Techniques		
10. Fundamentals	89
11. General Techniques	97
12. Modulation Techniques and Band Structure Dependence on Static Parameters	102
13. Kramers-Kronig Analysis	103
IV. Wavelength Modulation		
14. Experimental Techniques	105
15. Line Shapes	109
16. Results	112
V. Temperature Modulation		
17. General Considerations	117
18. Experimental Techniques	123
19. Results	125

VI. Stress Modulation	
20. General Considerations	137
21. Experimental Techniques: Piezoabsorption and Piezoreflectance ..	148
22. Results	150
VII. Electric Field Modulation	
23. Introduction	165
24. Theory	166
25. Experimental Techniques	202
26. Experimental Results	224
VIII. Modulation Techniques and Dependence of Band Structure on Static Parameters	
27. Introduction: Effects of Temperature and Doping	277
28. Electroreflectance in Binary and Pseudobinary Alloys	280
29. Uniaxial Stress Measurements	284
30. Modulation Techniques in the Presence of a Steady Magnetic Field	300
Appendix I. A Few Relationships Involving Airy Functions ..	325
Appendix II. Convolution Expression for $\epsilon(\omega, \mathcal{E})$; Experimental Absorption Edges	329
Appendix III. $k \cdot p$ Perturbation Theory, Effective Masses, and Effective g-Factors of Semiconductors	331
