PREFACE . . . . .	ix
<b>I. Characteristics of Solid State Plasmas</b>	
1. What Is a Plasma? . . . . .	1
2. Conditions for Weak Coupling . . . . .	3
3. Fermi Liquid Theory—Introductory Remarks . . . . .	5
4. Coulomb Energy in a Plasma . . . . .	7
5. What Parameters Characterize a Plasma?—Screening Lengths	8
6. The Characteristic Frequency . . . . .	11
7. Other Plasma Parameters . . . . .	15
References . . . . .	19
<b>II. Theory of Important Plasma Experiments</b>	
8. Qualitative Discussion of Scattering Experiments . . . . .	20
9. Analysis of Electron Scattering Experiments . . . . .	23
10. Scattering from a Noninteracting Electron System . . . . .	26
11. Light Scattering—The Classical, Single-Component Case . . . . .	27
12. Transmission Experiments: Introductory Remarks . . . . .	31
13. Response Functions . . . . .	33
14. Response to the Total Field . . . . .	37
15. The Plasma Dielectric Constant . . . . .	40
16. Response to Transverse Fields . . . . .	43
17. The Fluctuation-Dissipation Theorem . . . . .	47
References . . . . .	48
<b>III. The Random Phase Approximation</b>	
18. The Self-Consistent Field Method . . . . .	49
19. Discussion of the Random Phase Approximation . . . . .	52
20. Static Properties of a Degenerate Plasma . . . . .	55
21. High-Frequency Properties of a Degenerate Plasma . . . . .	57
22. Screening in Classical Plasmas . . . . .	59
23. Plasma Waves in Maxwellian Plasmas . . . . .	60
References . . . . .	62

**IV. Comparison with Experiment—Degenerate Plasmas**

24. RPA Formula for the Spectrum . . . . .	64
25. Integrated Spectrum for Characteristic Energy Loss Experiments . . . . .	65
26. Mean Free Path For Plasmon Emission . . . . .	66
27. Surface Plasmons . . . . .	67
28. Angular Variation of Characteristic Energy Loss Spectra . . . . .	68
29. Exchange Corrections—The Generalized Random Phase Approximation . . . . .	71
30. The Cutoff Angle and Decay of Long-Wavelength Plasmons . . . . .	75
31. Effects of Band Structure . . . . .	77
32. Plasmons in Doped Semiconductors . . . . .	80
References . . . . .	81

**V. Light Scattering Experiments**

33. Introduction . . . . .	82
34. Plasmon Light Scattering and Plasmon-Phonon Coupling . . . . .	85
35. The Magnetoplasma and Light Scattering Experiments Involving Magnetized Plasmas . . . . .	90
36. Multicomponent Plasmas . . . . .	99
37. Light Scattering by Multicomponent Plasmas . . . . .	107
38. Band Structure Effects in Light Scattering . . . . .	111
References . . . . .	117

**VI. Waves in Metals**

39. Introductory Remarks . . . . .	119
40. General Formulation of the Wave Propagation Problem . . . . .	123
References . . . . .	125

**VII. The Local Limit**

41. The Dispersion Relation for Helicons . . . . .	127
42. The Dielectric Tensor . . . . .	131
43. Alfvén Waves . . . . .	142
44. Helicon-Phonon Interaction . . . . .	144
References . . . . .	150

**VIII. Nonlocal Effects in a Noninteracting Gas**

45. The Solution of the Boltzmann-Vlasov Equation . . . . .	151
46. Helicons in the Nonlocal Regime . . . . .	157

47. Helicon Propagation at an Angle to the Magnetic Field . . . . .	161
48. Cyclotron Wave Propagation in a Noninteracting Gas . . . . .	164
49. The "Problem" of Boundaries . . . . .	191
References . . . . .	202
 <b>IX. Conduction Electron Spin Resonance in an Electron Gas</b>	
50. Hydrodynamic or Long-Wavelength Treatment of CESR . . . . .	204
51. CESR in a Bounded Medium . . . . .	212
References . . . . .	219
 <b>X. The Interacting Electron Liquid</b>	
52. The Phenomenological Formulation of Fermi-Liquid Theory . . . . .	220
53. Equilibrium Properties of the Interacting Electron Liquid . . . . .	227
54. Transport Equations for the Interacting Fermi Liquid . . . . .	232
55. The Electrical Transport Equation for Fermi Liquids . . . . .	241
56. CW in the Presence of Interactions . . . . .	245
57. CW Propagating Parallel to the Magnetic Field . . . . .	252
58. Spin Waves in the Interacting Electron Liquid . . . . .	256
References . . . . .	271
 <b>XI. The Microscopic Theory of Fermi Liquids</b>	
59. Introduction to the Microscopic Theory of Fermi Liquids . . . . .	273
60. The General Formulation of the Microscopic Theory . . . . .	274
61. Coulomb Interactions and the Landau Scattering Function . . . . .	283
62. The Electron-Phonon Interaction and the Landau Scattering Function . . . . .	287
63. Comparison of Numerical Estimates and Experimental Results . . . . .	290
References . . . . .	294
 <b>ADDENDUM: ALKALI METAL PARAMETERS</b> . . . . .	295
 <b>AUTHOR INDEX</b> . . . . .	297
 <b>SUBJECT INDEX</b> . . . . .	301
