

## **Contents**

PREFACE .....	ix
<b>I. Phase Transitions and Order Parameters</b>	
A. Disorder to Order .....	1
B. Critical Exponents .....	14
C. Order Parameters .....	15
D. Broken Symmetry .....	36
E. Long Range Order and Dimensionality .....	42
<b>II. Phenomenological Theories</b>	
A. Landau Theory .....	47
B. Ginzburg–Landau Theory .....	54
C. Beyond Ginzburg–Landau .....	78
D. Hydrodynamics .....	84
E. Time-Dependent Ginzburg–Landau Theory .....	89
<b>III. The Superconducting Transition Temperature</b>	
A. Electron–Phonon Mechanisms .....	92
B. Excitonic Mechanisms .....	121
<b>IV. The Curie and Néel Temperatures</b>	
A. Direct Exchange .....	124
B. Superexchange .....	133
C. Virtual Phonon Exchange .....	143
D. Coulomb Interactions among Itinerant Electrons .....	144
E. Indirect Exchange .....	159
F. Anisotropy .....	161
<b>V. Experimental Considerations</b>	
A. Calorimetry .....	167
B. Magnetic Susceptibility .....	170
C. Resistivity Measurements .....	179
D. Scattering .....	185
E. Resonance .....	191
F. Tunneling .....	197
<b>VI. Systematics of Long Range Order</b>	
A. Superconductivity .....	220
B. Magnetism .....	247

<b>VII. Impurities and Long Range Order</b>	
A. The Virtual Bound State .....	266
B. Manifestations of Local Moments .....	278
C. Coexistence of Superconductivity and Ferromagnetism .....	296
D. Coexistence of Superconductivity and Charge Density Waves .....	300
<b>VIII. Domain Structures</b>	
A. Magnetic Domains .....	302
B. Magnetic Domain Walls .....	307
C. Magnetic Bubbles .....	315
D. The Magneto-Optical Probe .....	317
E. Inhomogeneous States in Superconductors .....	323
F. Surfaces .....	337
G. Inhomogeneities in One and Two Dimensions .....	345
<b>IX. Order Amidst Disorder</b>	
A. Introduction .....	350
B. Preparation .....	352
C. Characterization .....	354
D. Superconductivity in Amorphous Metals .....	364
E. Amorphous Magnetism .....	369
F. Granular Metals .....	383
Epilogue .....	391
Author Index .....	393
Subject Index .....	401
Substance Index .....	410
