

Contents

1. Introduction and Outline	1
1.1 Synergetic Concepts in the Natural Sciences	1
1.1.1 Physico-Chemical Systems	2
1.1.2 Dynamics and Equations of Motion in Physico-Chemical Systems	3
1.2 Synergetic Concepts in Sociology	10
1.3 Significance and Limitations of Quantitative Sociology	14
2. Opinion Formation – an Elementary Example of Semi-Quantitative Sociology	18
2.1 The Model	18
2.2 The Equations of Motion	19
2.2.1 The Master Equation for $p(n; t)$	19
2.2.2 The Fokker-Planck Equation for $P(x; t)$	22
2.2.3 The Langevin Equation for $x(t)$	25
2.2.4 Equations for Mean Values	26
2.3 Solutions of the Equations of Motion	28
2.3.1 Stationary Solutions	28
2.3.2 *Time Dependent Solutions	30
2.4 Choice of Transition Probabilities and the Explicit Form of the Model	40
2.5 The Sociological Interpretation of the Model	45
3. Fundamental Concepts of Quantitative Sociology	55
3.1 Attitude Space, Socio-Configuration and Situation Space	55
3.2 Equations of Motion for the Socio-Configuration	58
3.2.1 The Master Equation	58
3.2.2 The Stochastic and the Fokker-Planck Equation	62
3.2.3 *The Langevin Equations and the Fokker-Planck Equation	66
3.2.4 Approximate Mean Value Equations	72
3.2.5 *Exact Mean Value Equations	73
3.3 The Dynamics of Trend Parameters and of the Situation Vector	76
3.4 *Mean Value Equations for Grossvariables of the Socio-Configuration	78

Sections marked with * can be omitted on a first reading

	Contents	xi
4. Migration and/or Birth-Death Processes in Populations	86	
4.1* The General Model	87	
4.2 Migration of Two Interacting Populations Between Two Parts of a City	90	
4.2.1 Master Equation, Mean Value, Variance and Fokker-Planck Equations	91	
4.2.2 Solutions of the Equations in Relevant Cases	96	
4.3 Birth-Death Processes Within a Single Population	112	
4.3.1 Stochastic Versus Deterministic Description	112	
4.3.2 *Multi-Step Birth-Death Processes	122	
4.4 Migration and Predator-Prey Interaction Between Two Species	127	
4.4.1 Master Equation and Mean Value Equations for the Special Model	128	
4.4.2 Comparison of Predator-Prey Interaction Without and With Non-Linear Migration	131	
5. Non-Equilibrium Theory of Investment: “The Schumpeter Clock”	141	
5.1 Introduction	141	
5.1.1 The Relation to Preceding Concepts and Models	141	
5.1.2 The Purpose, the Main Proposition and the Limitations of the Schumpeter Clock Model	142	
5.2 Macro- and Micro-Economic Variables of the Model and Their Interdependence	143	
5.2.1 Strategic Investment	143	
5.2.2 The Investors’ Configuration	145	
5.2.3 Strategic Investment and the Investors’ Configuration	147	
5.3 Design of the Investors’ Interaction Model	148	
5.3.1 The Equation of Motion for the Investors’ Configuration	149	
5.3.2 The Equation of Motion for the Investors’ Propensities	155	
5.3.3 The Closed Set of Equations of Motion	157	
5.4 Structural Analysis of the System of Equations	158	
5.4.1 The Singular Points of the Equations of Motion	158	
5.4.2 Stability Analysis	159	
5.4.3 The Limit Cycle Existence Theorem	161	
5.5 Numerical Analysis Based on the Model	164	
5.5.1 Model Solutions for the Motion of a Hypothetical Economy in Ideal Time	164	
5.5.2 Changes in Industrial Strategic Investment in the Federal Republic of Germany Between 1956 and 1978	168	
6. The Interaction of Competitive Macrosocieties	175	
6.1 Reconsideration of the Problem of Model Construction	175	
6.2 The “Minimal Model”	178	
6.2.1 The Grossvariables of the Model	178	
6.2.2 The Equations of Motion	182	

XII Contents

6.3 Solutions of the Model Equations	193
6.3.1 Stationary Solutions	194
6.3.2 Numerical Analysis of Non-Stationary Solutions	195
6.4 Political Implications	204
References	209
Subject Index	214
