Contents

1. Introduction. By F.T. Arecchi and R.G. Harrison 1
1.1 A Heuristic Approach to Instabilities 1
1.2 About This Book 4
References 7

Part I **Instabilities and Chaos in Active Systems**

2. Instabilities and Chaos in Single-Mode Homogeneous Line Lasers. By F.T. Arecchi (With 26 Figures) 9
2.1 Background 9
2.2 Transient Decay Toward a Stable State 10
2.3 Deterministic Chaos 14
2.3.1 Historical Aspects 14
2.3.2 Dynamical Aspects 15
2.3.3 Information Aspects 18
2.3.4 Role of Transients: The Hyperchaos 21
2.4 The Modulated Laser 22
2.5 The Laser with Injected Signal (LIS) 29
2.6 Instabilities in a Laser with Feedback 32
2.7 The Bidirectional Ring Laser 36
2.8 Conclusion 39
2.A Appendix: A Simple-Minded Approach to Laser Equations .. 40
2.A.1 The Laser Equations 40
2.A.2 Adiabatic Elimination of Polarization – Modulation and Injection 42
2.A.3 Linear Stability Analysis of Class B Solutions 44
2.A.4 Laser with Injected Signal (LIS) 45
2.A.5 The Bidirectional Class B Ring Laser 45
References 47

3. Experimental Measurements of Transitions to Pulsations and Chaos in a Single Mode, Unidirectional Ring Laser with an Inhomogeneously-Broadened Medium
By N.B. Abraham, A.M. Albano, T.H. Chyba, L.M. Hoffer, M.F.H. Tarroja, S.P. Adams, and R.S. Gioggia
(With 14 Figures) 49
3.1 Background 49
3.2 The Single-Mode, Inhomogeneously-Broadened, Unidirectional Ring Laser 52
3.2.1 Background 52
3.2.2 Experimental Set-Up 53
3.2.3 Thresholds for Transitions from Stable to Pulsed Behavior 55
3.2.4 Changes in the Pulsation Pattern Above the Second Threshold 58
3.2.5 Confirming and Characterizing the Chaos 64
3.3 Discussion 68
References 69

4. Single- and Multi-Mode Operation of a Laser with an Injected Signal. By D.K. Bandy, L.A. Lugiato, and L.M. Narducci (With 18 Figures) 73
4.1 Background Information 73
4.2 Equations of Motion and the Steady-State Configuration 76
4.3 Linear Stability Analysis in the Mean-Field Limit 81
4.4 Adiabatic Elimination of the Atomic Variables 88
4.5 Dynamical Behavior of the Single-Mode Model 92
4.6 Power Spectra and Lyapunov Exponents 98
4.A Appendix: Derivation of (4.14) 104
4.B Appendix: List of the Coefficients of (4.29) 105
4.C Appendix: List of Coefficients in (4.31) 106
References 107

5. Experimental Observations of Single Mode Laser Instabilities in Optically Pumped Molecular Lasers
By D.J. Biswas, R.G. Harrison, C.O. Weiss, W. Klische, D. Dangoisse, P. Glorieux, and N.M. Lawandy (With 8 Figures) .. 109
5.1 Background 109
5.2 Optically Pumped Far Infrared Lasers 110
5.2.1 Resonant Pumping 110
5.2.2 Detuned Pumping 113
5.2.3 Single-Mode Laser Instability in Near Resonantly Pumped Mid-Infrared Systems 117
5.3 Conclusion 120
References 121

6. Quantum Treatment of Amplified Spontaneous Emission in High-Gain Free-Electron Lasers
By R. Bonifacio and F. Casagrande 123
6.1 Introduction 123
6.2 The Quantum Hamiltonian Model 125
6.3 Classical Limit and Classical Treatment of Amplified Spontaneous Emission 126
6.4 The Basic Equations of the Linear Quantum Regime 129
6.5 Analysis on Resonance and for Sufficiently Long Times 131
6.6 "Harmonic Oscillator" Limit 132
6.7 "Classical" Limit 135
6.A Appendix 137
References 138
Additional References with Titles 138

Part II **Instabilities and Chaos in Passive Systems**

7. Global Bifurcations and Turbulence in a Passive Optical Resonator. By J.V. Moloney (With 22 Figures) 139
7.1 Background Material 139
7.2 Model and Theory 142
7.3 Bifurcation and Global Phase Portraits 144
7.4 The Plane-Wave Map 147
7.4.1 The Newhouse Sink Phenomena 150
7.4.2 Boundary Crisis 153
7.5 Gaussian Beams (2D Problem) 154
7.5.1 Stability of the Plane-Wave Map to Transverse Spatial Perturbations 154
7.5.2 Solitary Waves as Fixed Points of the Infinite Dimensional Map 156
7.5.3 Many Routes to Optical Turbulence 159
7.6 Gaussian Beams (3D Problem) 167
7.7 Summary 169
References 171

8. Experimental Verification of Regenerative Pulsations and Chaos. By M.W. Derstine, J.L. Jewell, H.M. Gibbs, F.A. Hopf, M.C. Rushford, L.D. Sanders, and K. Tai (With 19 Figures) 175
8.1 Regenerative Pulsations 175
8.2 Ikeda Instabilities 180
8.2.1 Experimental Setup 180
8.2.2 Review of Period Doubling 183
8.2.3 Universality 183

8.2.4 Nature of Transitions 184
8.2.5 Effects of Noise 185
8.2.6 Other Waveforms/Alternate Paths 186
8.2.7 Test for Chaos in High-Speed Optical Systems 192
8.3 Instabilities in Sodium Vapor 194
8.3.1 Optically Thick 194
8.3.2 Optically Thin 196
8.4 Issues for Fast Chaotic Systems 197
References 198

9. Instabilities and Routes to Chaos in Passive All-Optical Resonators Containing Molecular Gases
By R.G. Harrison, W.J. Firth, and I.A. Al-Saidi (With 20 Figures) 201
9.1 Background 201
9.2 Theory of Instabilities in Passive Nonlinear Resonators 202
9.2.1 The Basic Model 203
9.2.2 Physical Interpretation of the Ikeda Instability 206
9.2.3 Fabry-Perot Resonators 208
9.2.4 Universality 213
9.2.5 Trapping Bifurcation Points 215
9.3 Nonlinear Absorption Characteristics of Molecules 216
9.3.1 Ammonia 217
9.3.2 Sulphur Hexafluoride 217
9.3.3 Molecular Energy-Level Scheme 219
9.4 Optical Bistability and Instability Generation in Optical Resonators 224
9.4.1 Ring Resonator 224
9.4.2 Fabry-Perot Resonator 227
9.4.3 Fabry-Perot Resonator with Sulphur Hexafluoride 233
9.5 Conclusion 234
References 235

10. Transmission Properties of a Sodium-Filled Fabry-Perot Resonator. By G. Giusfredi, S. Cecchi, E. Petriella, P. Salieri, and F.T. Arecchi (With 8 Figures) 237
10.1 Background 237
10.2 Experimental Set-Up 238
10.3 Discussion 239
10.3.1 Optical Bistability by Zeeman Pumping 239
10.3.2 Optical Tristability 240
10.3.3 Multistability 242
10.3.4 Self-Pulsing 245
References 249
