1. Introduction	
By J. Kruger	1
2. The Structure-Function Problem in Visual Cortical Circuitry Studied by Cross-Correlation Techniques and Multi-Channel Recordings	
By K. Toyama (With 13 Figures)	5
2.1 An Approach to the Structure-Function Problem by Cross-Correlation Technique	5
2.2 Experimental Techniques for Cross-Correlation Analysis	6
2.3 Basic Neuronal Interaction Demonstrated by Cross-Correlation Analysis	7
2.4 Signal Transmission Demonstrated by Cross-Correlation Analysis	9
2.4.1 Geniculo-Cortical Transmission	9
2.4.2 Cortico-Geniculate Transmission	11
2.5 Intracortical Transmission Along a Single Functional Column or to Adjacent Functional Columns	12
2.5.1 Nonspecific Transmission of Geniculo-Cortical Excitation	12
2.5.2 Specific Transmission of Cortical Excitation	14
2.5.3 Specific Transmission of Cortical Inhibition	15
2.5.4 Contribution of Interactions to Visual Responses	16
2.6 Transmission to Distant Functional Columns	17
2.7 Functional Scheme of Visual Cortical Circuitry	18
2.8 Synaptic Interaction Studied by Spike-Triggered Averaging	21
2.9 Multi-Channel Optical Recording of Neural Activity	24
2.10 Concluding Remarks	27
References	28
3. Optical Imaging of Neuronal Activity in the Living Brain	
By R. D. Frostig, E. E. Lieke, A. Arieli, D. Y. Ts'o, R. Hildesheim, and A. Grinvald (With 12 Figures)	30
3.1 Why Optical Imaging?	30
3.2 Optical Imaging of Neuronal Activity with Voltage-Sensitive Dyes	31

3.3	Optical Imaging Based on Intrinsic Signals	33
3.4	Studies of the Organization and Interactions of Neuronal Populations in Vivo Utilizing Voltage-Sensitive Dyes	33
3.4.1	Imaging Evoked Responses	34
3.4.2	Surround Inhibition Revealed by Optical Imaging	37
3.4.3	Selective Visualization of Neuronal Assemblies in Cat Visual Cortex	40
3.5	Optical Imaging of Activity Using Intrinsic Signals	42
3.5.1	Determining the Source and Nature of the Intrinsic Signals	42
3.5.2	Mapping of Functional Organization in Visual Cortex	43
3.5.3	Increasing the Spatial Resolution of Imaging with Intrinsic Signals	43
3.5.4	Imaging of Functional Organization through the Intact Dura and Thinned Skull Preparation	47
3.5.5	Revealing Inhibitory Interactions Between Adjacent Cortical Regions	48
3.6	Comparison of Optical Imaging With and Without Voltage-Sensitive Dyes	48
3.7	Conclusions	50
	References	50
4.	Dynamic Aspects of Neuronal Cooperativity: Fast Stimulus-Locked Modulations of Effective Connectivity By Ad. M. H. J. Aertsen and G. L. Gerstein (With 5 Figures)	52
4.1	Introduction	52
4.2	Computational Methods	54
4.2.1	Cross-Correlation Analysis	54
4.2.2	Joint Peri Stimulus Time Histogram	54
4.2.3	Gravitational Clustering	55
4.3	Results	56
4.3.1	General Results	56
4.3.2	Cat Area 17	57
4.3.3	Gravitational Clustering	57
4.3.4	Joint Peri Stimulus Time Histogram	59
4.3.5	Stimulus Coding by Correlated Firing	64
4.4	Discussion	65
	References	66
5.	Temporal Structure of Cortical Information Processing: Cortical Architecture, Oscillations and Non-Separability of Spatio-Temporal Receptive Field Organization By H. R. O. Dinse, K. Krüger, and J. Best (With 15 Figures)	68
5.1	Introduction	68
5.1.1	Receptive Fields as Spatial Filters	68
5.1.2	Functional Impact of Cortical Architecture	69

5.1.3	A Network Model of Cortical Information Processing Incorporating Some Basic Aspects of Cortical Architecture	69
5.1.4	Nonlinear Behavior vs. a Complex Temporal Response Pattern	70
5.1.5	Hierarchical-Parallel Processing in the Cat Visual System	70
5.1.6	Synopsis	71
5.2	Temporal-Spatial Aspects of Receptive Field Organization . . .	71
5.2.1	Low-Frequency Oscillation in Neuronal Response Following Photic Stimulation	71
5.2.2	Dynamics of Receptive Field Organization	77
5.2.3	Impacts of Non-Separability for RF Organization	82
5.2.4	Evidence for the Use of a Time Code	86
5.2.5	Evidence for Positive Feedback	89
5.2.6	General Outline of a Theory of RF Organization	90
5.2.7	Implications of RFs with Non-Separable Spatio-Temporal Behavior for Processing of Moving Stimuli	92
5.2.8	Evidence For Parallel Processing Across Different Hierarchical Levels	96
5.3	Summary	97
5.3.1	Low-Frequency Oscillation of Neuron Response	97
5.3.2	Non-Separability of Spatial and Temporal Behavior . . .	98
5.3.3	Further Implications of the Oscillatory Response Pattern	98
5.3.4	The Origin of the Oscillatory Pattern	99
5.4	Perspectives – Anything is Temporal	99
