

# Contents

<b>1. Goal .....</b>	1
1.1 Why a New Computer Concept? .....	1
1.2 What is Synergetics About? Pattern Recognition as Pattern Formation .....	3
1.3 Cognitive Processes and Synergetic Computers .....	4

---

## Part I Synergetic Computers

---

<b>2. What are Patterns? .....</b>	9
<b>3. Associative Memory .....</b>	18
<b>4. Synergetics – An Outline .....</b>	20
4.1 Some Typical Examples .....	20
4.2 Reminder of the Basic Concepts and Mathematical Tools of Synergetics .....	23
<b>5. The Standard Model of Synergetics for Pattern Recognition .....</b>	36
5.1 Prototype Pattern Vectors and Test Pattern Vectors .....	36
5.2 Construction of the Dynamics .....	39
5.3 Important Properties of $V(\xi_k)$ .....	43
5.3.1 Summary of the Results .....	43
5.3.2 Where Are the Deepest Minima of $V$ ? .....	43
5.3.3 Where Are the Stationary and Stable Points of $V$ ? .....	45
5.3.4 How Are Stable Fixed Points and Saddle Points Reached? .....	49
<b>6. Examples: Recognition of Faces and of City Maps .....</b>	51
<b>7. Possible Realizations by Networks .....</b>	56
<b>8. Simultaneous Invariance with Respect to Translation, Rotation and Scaling .....</b>	60
8.1 An Approach Based on Fourier Transforms and Logarithmic Maps .....	60
8.2 Numerical Calculations .....	65

8.3 A Second Approach to the Invariance Problem .....	68
8.4 General Transformations of Patterns .....	74
<b>9. Recognition of Complex Scenes.</b>	
Scene-Selective Attention .....	81
<b>10. Learning Algorithms .....</b>	84
10.1 Survey; Several Lines of Approach .....	84
10.2 Learning of the Synaptic Strengths .....	84
10.2.1 An Iterative Procedure for Determining the Adjoint Vectors $v_k^+$ .....	84
10.2.2 A Special Case .....	88
10.2.3 Implementation in a Three-Layer (Two-Layer) Network .....	89
10.3 Information and Information Gain .....	92
10.4 The Basic Construction Principle of a Synergetic Computer Revisited .....	96
10.5 Learning by Means of the Information Gain .....	99
10.6 A Learning Algorithm Based on a Gradient Dynamics .....	106
10.6.1 Construction of the Lyapunov Function .....	107
10.6.2 Projection onto the $q_j$ -Space .....	109
10.7 Summary .....	119
<b>11. Learning of Processes and Associative Action .....</b>	121
11.1 Derivation of the Fokker-Planck Equation .....	121
11.2 Derivation of the Ito-Langevin Equation .....	126
11.3 Taking Care of a Reduced Information .....	128

## Part II Cognition and Synergetic Computers

<b>12. Comparisons Between Human Perception and Machine “Perception” .....</b>	133
12.1 Introductory Remarks .....	133
12.2 Rotational Invariance. Adaption and Assimilation. Gestalt. Decomposition of Scenes .....	135
12.2.1 Rotational Invariance .....	135
12.2.2 Adaption and Assimilation. Gestalt .....	136
12.2.3 Decomposition of Scenes .....	136
12.3 Recognition of Low- and High-Pass Filtered Faces .....	138
<b>13. Oscillations in the Perception of Ambiguous Patterns .....</b>	149
13.1 Introduction .....	149
13.2 Properties of Ambivalent Patterns .....	152
13.3 Perception of Ambivalent Patterns Without Bias .....	155
13.4 Oscillations in Perception in the Presence of a Bias .....	156

<b>13.5 Ambiguous Patterns with More Than Two Alternatives .....</b>	<b>160</b>
<b>13.6 Hysteresis .....</b>	<b>163</b>
<b>13.7 The Role of Fluctuations of Attention Parameters .....</b>	<b>165</b>
<b>13.7.1 The Model .....</b>	<b>167</b>
<b>13.7.2 Results .....</b>	<b>167</b>
<b>13.7.3 Discussion .....</b>	<b>170</b>
 <b>14. Dynamic Pattern Recognition of Coordinated Biological Motion ..</b>	 <b>171</b>
<b>14.1 Introduction. Perception of Structure in Biological Motion ...</b>	<b>171</b>
<b>14.2 The Pattern Generation         and Pattern Recognition Experiments .....</b>	<b>172</b>
<b>14.3 The Behavioral Pattern Recognition Algorithm .....</b>	<b>174</b>
<b>14.4 Application and Results .....</b>	<b>176</b>
<b>14.5 Recognition of Patterns of Movement         Characterized only by Specific Light Spots .....</b>	<b>178</b>
<b>14.6 Recognition of Movement Patterns in a Plane         Other than that Perpendicular to the Observer .....</b>	<b>181</b>

---

### **Part III Logical Operations and Outlook**

---

 <b>15. Realization of the Logical Operation XOR by a Synergetic Computer .....</b>	 <b>191</b>
<b>15.1 Introduction .....</b>	<b>191</b>
<b>15.2 Solution of the XOR Problem .....</b>	<b>191</b>
<b>15.3 Comparison with Fluid Instabilities .....</b>	<b>193</b>
<b>15.4 Learning .....</b>	<b>194</b>
 <b>16. Towards the Neural Level .....</b>	 <b>195</b>
<b>16.1 Neurons Fire and May Mode-Lock .....</b>	<b>195</b>
<b>16.2 Summary of the Main Results .....</b>	<b>196</b>
<b>16.3 Oscillator Model of a Neuron: Rotating Wave Approximation         and Slowly Varying Amplitude Approximation .....</b>	<b>197</b>
<b>16.4 A Network of Oscillators for Associative Memory .....</b>	<b>198</b>
<b>16.5 Frequency Locking of Two Oscillators .....</b>	<b>206</b>
<b>16.6 Frequency Locking of Several Oscillators .....</b>	<b>209</b>
 <b>17. Concluding Remarks and Outlook .....</b>	 <b>211</b>
<b>17.1 Pattern Recognition Is Pattern Formation .....</b>	<b>211</b>
<b>17.2 Attractor States and Beyond .....</b>	<b>212</b>
<b>17.3 Some Problems Left for the Future .....</b>	<b>213</b>
 <b>Bibliography and Comments .....</b>	 <b>215</b>
 <b>Subject Index .....</b>	 <b>223</b>
