Contents

1. Introduction 1

1.1 What Is Nonlinear Nonequilibrium Thermodynamics? 1

1.1.1 Foundations of Nonequilibrium Thermodynamics 3

1.1.2 What Nonequilibrium Results Are Discussed in This Book? 4

1.1.3 Distinguishing Features of Nonlinear Nonequilibrium Thermodynamics 5

1.2 Early Work on Nonlinear Nonequlibrium Thermodynamics 6

1.3 Some Particular Problems and Their Corresponding FDRs: Historical Aspects 7

1.3.1 Einstein's Problem: Determination of the Diffusion Coefficient of a Brownian Particle 7

1.3.2 A Second Problem: Determination of the Intensity of a Random Force Acting on a Brownian Particle 8

1.3.3 The More General Linear Markov FDR 9

1.3.4 Onsager's Reciprocal Relations 11

1.3.5 Nyquist's Formula 13

1.3.6 The Callen–Welton FDT and Kubo's Formula 16

1.3.7 Mori's Relation 18

1.3.8 Thermal Noise of Nonlinear Resistance: The Markov Theory 19

1.3.9 Thermal Noise of Nonlinear Resistance: The Non-Markov Theory . . 22

2. Auxiliary Information Concerning Probability Theory and Equilibrium Thermodynamics 25

2.1 Moments and Correlators 25

2.1.1 Moments and the Characteristic Function 25

2.1.2 Correlators and Their Relationship with Moments 26

2.1.3 Moments and Correlators in Quantum Theory 29

2.2 Some Results of Equilibrium Statistical Thermodynamics 30

2.2.1 Entropy and Free Energy 30

2.2.2 Thermodynamic Parameters. The First Law of Thermodynamics . . . 31

2.2.3 The Second Law of Thermodynamics 33

2.2.4 Characteristic Function of Internal Parameters and Free Energy . . . 33

2.2.5 Thermodynamic Potential $\Gamma(a)$ 35

2.2.6 Conditional Entropy 36
2.2.7 Formulas Determining the Equilibrium Probability Density of Internal Parameters 38
2.2.8 Conditional Thermodynamic Potentials and the First Law of Thermodynamics 40
2.2.9 The Functions *S (B)* and *F (B)* and the Second Law of Thermodynamics 43
2.2.10 The Case in which Energy Is an Argument of Conditional Entropy . . 44
2.2.11 Formulas of Quantum Equilibrium Statistical Thermodynamics . . . 45
2.3 The Markov Random Process and Its Master Equation 46
2.3.1 Definition of a Markov Process 46
2.3.2 The Smoluchowski–Chapman Equation and Its Consequences 47
2.3.3 The Master Equation 49
2.3.4 The Fokker–Planck Equation and Its Invariant Form 50
2.3.5 The Stationary Markov Process 51
2.4 Infinitely Divisible Probability Densities and Markov Processes 52
2.4.1 Infinitely Divisible Probability Density 52
2.4.2 Stationary Markov Process with Independent Increments 54
2.4.3 Arbitrary Markov Processes 56
2.5 Notes on References to Chapter 2 57

3. The Generating Equation of Markov Nonlinear Nonequilibrium Thermodynamics 59

3.1 Kinetic Potential 59
3.1.1 Definition of Kinetic Potential 59
3.1.2 Relation Between the Kinetic Potential and the Free Energy: Asymptotic Formula 61
3.1.3 Example: Kinetic Potential for a System with Linear Relaxation and Quadratic Free Energy 62
3.1.4 Kinetic Potential Image 63
3.1.5 Modified Kinetic Potential 65
3.1.6 Properties of the Kinetic Potential and of Its Image 67
3.2 Consequences of Time Reversibility 69
3.2.1 Time-Reversal Symmetry of the Hamiltonian and of the One-Time Probability Density 69
3.2.2 Conditions Imposed on Transition Probabilities by Time Reversibility . 71
3.2.3 Time-Reversal and the Markov Operator 72
3.2.4 Restrictions Imposed on the Kinetic Potential and on Its Image 74
3.2.5 The Modified Generating Equation 76
3.3 Examples of the Kinetic Potential and of the Validity of the Generating Equation 77

3.3.1 Consequences of the Generating Equation for a System with Linear Relaxation and Quadratic Free Energy 77
3.3.2 Diode Model of a Nonlinear Resistor: Relaxation Equation 77
3.3.3 Diode Model: Explanation of the Paradox Related to Detection of Thermal Fluctuations 80
3.3.4 Diode Model: The Kinetic Potential and Its Image 82
3.3.5 Poisson Model of Nonlinear Resistor: Construction of the Markov Operator Using Current–Voltage Characteristics 83
3.3.6 Gupta's Formulas 86
3.4 Other Examples: Chemical Reactions and Diffusion 90
3.4.1 Chemical Reactions and Reaction Equations 90
3.4.2 Chemical Potentials 91
3.4.3 The Kinetic Potential Corresponding to (3.4.5) 93
3.4.4 Extent of Reaction and the Corresponding Kinetic Potential 95
3.4.5 Chemical Reactions as Spatial or Continuum Fluctuational Processes 97
3.4.6 Diffusion of a Gaseous Admixture in a Homogeneous Gas 98
3.4.7 Chemical Reactions with Diffusion 101
3.5 Generating Equation for the Kinetic Potential Spectrum 102
3.5.1 The Kinetic Potential Spectrum 102
3.5.2 The Generating Equation 103
3.5.3 Examples of Spectra 105
3.6 Notes on References to Chapter 3 107

4. Consequences of the Markov Generating Equation 108
4.1 Markov FDRs 108
4.1.1 Relations for Images of Coefficient Functions 108
4.1.2 Basic Fluctuation–Dissipation Relations 110
4.1.3 Modified FDRs 112
4.1.4 Generalization of FDRs to the Case of an External Magnetic Field or Other Time-Odd Parameters 113
4.1.5 The Functions R_+ and R_- and their Relationship 113
4.1.6 Another Form of Many-Subscript Relations 114
4.2 Approximate Markov FDRs and Their Covariant Form 116
4.2.1 Approximate Relationship Between the Coefficient Function and Its Image 116
4.2.2 Markov FDRs in Zeroth and First Orders in k 118
4.2.3 The Covariant Form of One-Subscript and Two-Subscript FDRs . . . 120
4.2.4 The Covariant Form of Quadratic FDRs 121
4.2.5 The Covariant Form of Cubic FDRs 123
4.3 Application of FDRs for Approximate Determination of the Coefficient Functions 126

4.3.1 Phenomenological Equation: Its Initial and Standard Forms 126
4.3.2 Linear Approximation 128
4.3.3 Linear–Quadratic Approximation 129
4.3.4 Linear–Quadratic–Cubic Approximation 131
4.3.5 Some Formulas of the Modified Version 132
4.3.6 Remark About the Use of Covariant FDRs for Constructing Coefficient Functions 132
4.4 Examples of the Application of Linear Nonequilibrium Thermodynamics Relations 133
4.4.1 Twofold Correlators in the Case of a System with Linear Relaxation and Quadratic Free Energy 133
4.4.2 Example: Elektrokinetic Phenomena 135
4.4.3 Thermokinetic Processes 137
4.4.4 Thermoelectric Phenomena 138
4.4.5 Anomalous Case: Circuit with Ideal Detector 139
4.4.6 The Mechanical Oscillator 142
4.4.7 Field Case: Maxwell's Equations and Their Treatment from the Viewpoint of Nonequilibrium Thermodynamics 144
4.4.8 Simple Chemical Reactions 146
4.4.9 Thermal Fluctuations of the Velocity of a Liquid or Gas 148
4.5 Examples of the Application of the Markov FDRs of Nonlinear Nonequilibrium Thermodynamics 151
4.5.1 Simple Circuit with a Capacitor and a Nonlinear Resistor 151
4.5.2 Circuit with an Inductor and a Nonlinear Resistor 153
4.5.3 Heat Exchange of Two Bodies in the Linear–Quadratic Approximation 154
4.5.4 Chemical Reaction in the Linear–Quadratic Approximation 156
4.5.5 Linear–Cubic Approximation: Example with Capacitance 159
4.5.6 Oscillatory Circuit 160
4.5.7 Nonlinear Friction in the Case of a Spherical Body Moving in a Homogeneous Isotropic Medium 162
4.5.8 Nonlinear Electrical Conduction in an Isotropic Medium 164
4.6 *H*-Theorems of Markov Nonequilibrium Thermodynamics 165
4.6.1 *H*-Theorems of Linear Theory 165
4.6.2 The Second Law of Thermodynamics in the Linear Approximation: An Example 167
4.6.3 The *H*-Theorem of the Nonlinear Theory 168
4.6.4 Can Prigogine's Theorem Be Generalized to the Nonlinear Case? . . . 169
4.7 Notes on References to Chapter 4 170

5. Fluctuation–Dissipation Relations of Non-Markov Theory 171
5.1 Non-Markov Phenomenological Relaxation Equations and FDRs of the First Kind 171

5.1.1 Relaxation Equations with After-effects 171
5.1.2 Linear Approximation: Reciprocal Relations 172
5.1.3 Linear FDR of the First Kind 175
5.1.4 Particular Case of Equations in the Linear–Quadratic Approximation . 178
5.1.5 Quadratic FDRs 180
5.1.6 General Definition of the Functions $\Phi_{\dots}$ 183
5.1.7 Generating Functional and Generating Equation 184
5.1.8 The H-Theorem of Non-Markov Theory 185
5.1.9 Covariant Form of Non-Markov FDRs of the First Kind 187
5.2 Definition of Admittance and Auxiliary Formulas 188
5.2.1 External Forces and Admittances 188
5.2.2 Admittances in the Spectral Representation 189
5.2.3 Passing to the Quantum Case 192
5.2.4 Formulas for Functional Derivatives with Respect to External Forces . 194
5.2.5 Formula for Permutation of Operators Under Averaging Sign in the Absence of External Forces 196
5.2.6 Consequences of Formula (5.2.71) 197
5.2.7 Identities for Operators $\Gamma^{\pm}$ 200
5.3 Linear and Quadratic FDRs of the Second Kind 202
5.3.1 Linear Fluctuation–Dissipation Theorem (FDT) 202
5.3.2 Symmetry of Quantum Moments and Correlators Under Time-Reversal Transformation 204
5.3.3 Reciprocal Relations of Linear Theory 207
5.3.4 Quadratic FDT 208
5.3.5 Other Forms of Quadratic FDT 209
5.3.6 Three-Subscript Relation for Derivative of Correlator with Respect to External Force 212
5.3.7 Linear and Quadratic FDRs with Modified Admittances 213
5.3.8 Non-Markov FDRs of the Second Kind in the Case Where Energy Is One of the Parameters B_a 214
5.3.9 Modified Variant of FDRs of the Second Kind 216
5.4 Cubic FDRs of the Second Kind 216
5.4.1 Formulas Pertaining to Four-Subscript Correlators and Commutators . 216
5.4.2 Relation for the Dissipationally Determinable Part of the Correlator . 219
5.4.3 Dissipationally Determinable Part of the Triadmittance 220
5.4.4 Dissipationally Determinable Part of the Biadmittance 221
5.4.5 Two Relationships for the Dissipationally Undeterminable Part of the Biadmittance 223
5.4.6 Relations for the Dissipationally Undeterminable Part of the Triadmittance 225
5.4.7 Relations for the Dissipationally Undeterminable Part of the Quadruple Equilibrium Correlator 226

5.4.8 Using Symmetrized Triadmittance for Obtaining the Quadruple Correlator 228
5.4.9 Modified Cubic FDRs 230
5.5 Connection Between FDRs of the First and Second Kinds 231
5.5.1 Relaxation Equations with External Forces 231
5.5.2 Derivation of Reciprocal Relation of the First Kind 233
5.5.3 Linear FDR 234
5.5.4 Linear–Quadratic Approximation: The Connection Between the Function $\Phi_{1,23}$ and the Quadratic Admittance $G_{1,23}$ 234
5.5.5 Stochastic Equation in the Linear–Quadratic Approximation 236
5.5.6 Derivation of the Quadratic FDR for $\Phi_{12,3}$ 237
5.5.7 Another Quadratic FDR 239
5.5.8 Necessary Conditions Imposed on the Method of External Force Inclusion in the Markov Case: Linear–Quadratic Approximation . . . 241
5.6 Linear and Quadratic FDRs of the Third Kind 244
5.6.1 Definition of Impedances 244
5.6.2 Reciprocal Relations for Linear Impedance 246
5.6.3 Linear FDR or Nyquist's Formula 247
5.6.4 Correlators of Random Forces in the Nonlinear Case: Their Relation to the Functions G 249
5.6.5 Formulas for $L_{12,3}$ and L_{123} 251
5.6.6 The Functions $Q_{\dots}$ and the Stochastic Representation of Random Forces 252
5.6.7 Quadratic FDRs of the Third Kind 253
5.6.8 Determination of L_1 and Q_1 255
5.6.9 Another Form of FDRs of the Third Kind 257
5.7 Cubic FDRs of the Third Kind 258
5.7.1 Relation Between Four-Subscript Functions $L_{\dots}$ and Functions $G_{\dots}$ . . 258
5.7.2 Dissipationally Determinable and Dissipationally Undeterminable Parts of the Functions L 260
5.7.3 Stochastic Representation and Its Consequences 260
5.7.4 Relations for the Dissipationally Determinable Parts of the Functions $Q_{\dots}$ 262
5.7.5 Relationships for the Dissipationally Undeterminable Parts of the Functions $Q_{\dots}$ 264
5.7.6 Another Form of Cubic FDRs of the Third Kind 265
5.8 Notes on References to Chapter 5 266

6. Some Uses of Non-Markov FDRs 268
6.1 Calculation of Many-Time Equilibrium Correlators and Their Derivatives in the Markov Case 268
6.1.1 Linear and Quadratic Admittances in the Markov Case 268

6.1.2 Twofold and Threefold Correlators in the Markov Case 271
6.1.3 Another Approach to the Computation of Twofold and Threefold Correlators: The Impedance Method 275
6.1.4 Finding the Fourfold Correlator: Its Dissipationally Determinable Part 279
6.1.5 Dissipationally Undeterminable Functions $Z^{(2)}_{12,34}$, $Y^{(2)}_{12,34}$ 281
6.1.6 Dissipationally Undeterminable Part of the Fourfold Correlator 283
6.1.7 Four-Subscript Derivatives of Correlators with Respect to Forces . . . 285

6.2 Examples of Computations of Many-Fold Correlators or Spectral Densities and Their Derivatives with Respect to External Forces 287
6.2.1 A Nonlinear Resistance–Inductance Electrical Circuit 287
6.2.2 An Electrical Circuit with Capacitance and Cubic Nonlinear Resistance . 290
6.2.3 The Threefold Correlator of the Internal Energy of a Body in Thermal Contact with Another Body 291
6.2.4 Velocity Correlators of a Body Travelling with Nonlinear Friction in an Isotropic Medium 292
6.2.5 A Circuit with Inductance in the Non-Markov Case 294
6.2.6 Threefold Spectral Density of the Concentration of Diffusing Gas . . . 296
6.2.7 Impedances and Admittances of an Electromagnetic Field in a Cubically Nonlinear Medium 298
6.2.8 Dissipationally Undeterminable Functions and the Fourfold Correlator of an Electromagnetic Field 300

6.3 Other Uses of Nonlinear FDRs 303
6.3.1 Calculation of $Z_{12,34}$ in the Diode Model of Nonlinear Resistance . . . 303
6.3.2 The Dissipationally Undeterminable Function $Z^{(2)}_{12,34}$ for the Example of Sect. 6.2.5 307
6.3.3 Serially Connected Nonlinear Subsystems at Different Temperatures . 308
6.3.4 The Threefold Flux Correlator for Serially Connected Nonlinear Subsystems at Different Temperatures 311
6.3.5 Nonfluctuational Fluxes in Systems Containing Nonlinear Dissipative Elements at Different Temperatures 312
6.3.6 An Example of Flux Due to Temperature Difference Between Nonlinear Resistances 315

6.4 Application of Cubic FDRs to Calculate Non-Gaussian Properties of Flicker Noise 318
6.4.1 Flicker Noise 318
6.4.2 How Will Flicker Noise Change if a Two-Terminal Impedor Is Connected to a Resistance with Flicker Properties? 320
6.4.3 Correlators for Flicker Noise in a Model of Fluctuating Resistance . . 321
6.4.4 Another Way of Obtaining Correlators 325

6.4.5 The Fourfold Correlator of Flicker Noise Applied to the Theory of the Voss and Clark Experiment 328
6.5 Notes on the References to Chapter 6 331

Appendices 332
A 1. Relation of Conjugate Potentials in the Limit of Small Fluctuations 332
A 2. On the Theory of Infinitely Divisible Probability Densities 333
A 2.1 Justification of the Representation (2.4.9) Subject to (2.4.10) 333
A 2.2 Example: Gaussian Distribution 334
A 3. Some Formulas Concerning Operator Commutation 337
A 4. Approximate Computation of Derivatives of $\Phi(x)$ 339
A 5. The Contribution of Individual Terms of the Master Equation 340
A 6. Spectral Densities and Related Formulas 342
A 6.1 Definition of Many-Fold Spectral Densities 342
A 6.2 Space–Time Spectral Densities 343
A 6.3 Spectral Density of Spatial Spectra and Space–Time Spectral Density . . 344
A 6.4 Spectral Density of Nonstationary and Nonhomogeneous Random Functions 344
A 7. Stochastic Equations for the Markov Process 345
A 7.1 The Ito Stochastic Equation 345
A 7.2 Symmetrized Stochastic Equations 346
