## Advances in Radar Weather

BY J. S. MARSHALL, WALTER HITSCHFELD AND K. L. S. GUNN, *McGill University, Montreal, Canada*

1. Introduction . . . . .	1
2. Precipitation Patterns . . . . .	4
3. Theory and Quantitative Observations. . . . .	32
Acknowledgments. . . . .	50
List of Symbols. . . . .	50
References. . . . .	51

## Methods of Objective Weather Forecasting

BY IRVING I. GRINGORTEN, *Air Force Cambridge Research Center, Cambridge, Massachusetts*

1. Introduction . . . . .	57
2. Classification of Objective Studies. . . . .	62
3. The Success and Future of Objective Forecasting . . . . .	79
4. Concluding Remarks. . . . .	85
Acknowledgments. . . . .	85
List of Symbols. . . . .	85
References. . . . .	86

## Wind Generated Gravity Waves

BY WILLARD J. PIERSON, JR., *Department of Meteorology and Oceanography, College of Engineering, New York University, New York, N. Y.*

1. Introduction . . . . .	93
2. Outline of Theory. . . . .	95
3. The Simple Harmonic Progressive Wave . . . . .	103
4. A Finite Wave Train in Deep Water. . . . .	107
5. A Stationary Gaussian Process in One Dimension . . . . .	117
6. A Stationary Gaussian Process in Three Dimensions. . . . .	125
7. The Ergodic Theorem . . . . .	134
8. A Definition of a Wind Generated Wave and of a Wind Generated Gravity Wave System. . . . .	136

9. Practical Wave Statistics. . . . .	137
10. Wave Generation and Theoretical Energy Spectra. . . . .	140
11. The Angular Variation of the Spectrum . . . . .	150
12. Sea Surface Glitter and Wave Slopes. . . . .	153
13. Wave Record Analysis. . . . .	158
14. Ship Motions. . . . .	160
15. Wave Refraction . . . . .	161
16. The Propagation of Wind Generated Gravity Waves. . . . .	163
17. Practical Methods for Observing and Forecasting Ocean Waves. . . . .	168
18. Unsolved Problems . . . . .	170
Acknowledgments. . . . .	171
List of Symbols. . . . .	171
References. . . . .	175

### Geological Chronometry by Radioactive Methods

BY J. LAURENCE KULP, *Lamont Geological Observatory (Columbia University),  
Palisades, N. Y.*

1. Introduction . . . . .	179
2. The Lead Methods. . . . .	182
3. The Carbon-14 Method . . . . .	198
4. The Strontium Method. . . . .	204
5. The Potassium Methods . . . . .	206
6. The Helium Method. . . . .	208
7. The Ionium Method. . . . .	209
8. Other Potential Methods. . . . .	211
References. . . . .	214

### Earthquake Seismographs and Associated Instruments

BY HUGO BENIOFF, *Department of Seismology, California Institute of Technology,  
Pasadena, California*

1. Torsion Seismographs . . . . .	220
2. Pendulum Seismographs with Viscous-Coupled Optical Recording Elements. . . . .	224
3. Moving-Conductor Electromagnetic Pendulum Seismographs . . . . .	225
4. Variable Reluctance Electromagnetic Pendulum Seismograph. . . . .	228
5. Electrostatic Transducer Pendulum Seismographs . . . . .	235
6. Carrier-Current Transducer Seismographs . . . . .	237
7. Linear Strain Seismograph . . . . .	244
8. Remote Recording Seismographs . . . . .	252
9. Components . . . . .	254
10. Seismograph Response Characteristics . . . . .	269
List of Symbols. . . . .	274
References. . . . .	275
AUTHOR INDEX . . . . .	277
SUBJECT INDEX. . . . .	283

## Advances in Radar Weather

J. S. MARSHALL, WALTER HITSCHFELD AND K. L. S. GUNN

*McGill University, Montreal, Canada*

	<i>Page</i>
1. Introduction.....	1
2. Precipitation Patterns.....	4
2.1. Radar Displays.....	4
2.2. Continuous Precipitation.....	7
2.3. Showery Precipitation.....	17
2.4. Hurricanes.....	23
2.5. Tornadoes.....	24
2.6. Lightning.....	25
2.7. Clouds.....	27
2.8. "Angels".....	29
2.9. Summary.....	31
3. Theory and Quantitative Observations.....	32
3.1. The Radar Equation.....	32
3.2. Back Scattering from Spherical Particles.....	33
3.3. Assemblies of Particles.....	35
3.4. Attenuation.....	41
3.5. Fluctuations.....	42
3.6. Quantitative Observations.....	46
3.7. Summary.....	49
Acknowledgments.....	50
List of Symbols.....	50
References.....	51

# Methods of Objective Weather Forecasting

IRVING I. GRINGORTEN

*Air Force Cambridge Research Center, Cambridge, Mass.*

	<i>Page</i>
1. Introduction.....	57
1.1. Definition.....	57
1.2. Purpose.....	58
1.3. Interest.....	59
1.4. Limitations.....	59
1.5. Historical Attitudes.....	61
1.6. Compromise.....	62
2. Classification of Objective Studies.....	62
2.1. Devices.....	63
2.1.1. Device I. Algebraic Formulas Derived from Physical Principles...	63
2.1.2. Device II. Algebraic Formulas Whose Constants Are Determined Empirically.....	63
2.1.3. Device III. Linear or Curvilinear Regression.....	64
2.1.4. Device IV. Graphical System of Stratification; Use of Scatter Diagrams and Fitting by Eye.....	64
2.1.5. Device V. Association of Predictors and Predictands by Contingency Tables or Tabulations of Historical Data.....	65
2.1.6. Device VI. The Analogue.....	70
2.1.7. Device VII. List of Rules; Stratification of Cases; Process of Elimination.....	71
2.1.8. Discussion.....	71
2.2. Predictors.....	72
2.2.1. Direct Surface Observations.....	73
2.2.2. Upper-Air Observations.....	73
2.2.3. Surface Weather Charts.....	73
2.2.4. Upper-Air Charts.....	74
2.2.5. Number of Predictors per Study.....	74
2.3. Predictands.....	74
2.4. Newer Techniques.....	76
3. The Success and Future of Objective Forecasting.....	79
3.1. Determining Success.....	79
3.2. The Degree of Accuracy.....	81
3.3. The Future of Objective Methods.....	83
4. Concluding Remarks.....	85
Acknowledgments.....	85
List of Symbols.....	85
References.....	86
