## Arctic Ice Island Research

BY A. P. CRARY, *Geophysics Research Directorate, Air Force Cambridge Research Center, Cambridge, Massachusetts*

1. Introduction . . . . .	1
2. Scientific Studies of the Arctic Ocean Area. . . . .	6
3. Description of the Ice Islands . . . . .	16
4. Studies Involving T-3 Uniqueness . . . . .	34
5. Future of Ice Islands . . . . .	38
Acknowledgments. . . . .	39
List of Symbols . . . . .	39
References. . . . .	39
General Bibliography . . . . .	41

## Recent Developments in the Study of the Polarization of Sky Light

BY ZDENEK SEKERA, *University of California at Los Angeles, California*

1. Introduction. . . . .	43
2. Theory of the Polarization of Sky Light. . . . .	46
3. Measurements of the Sky-Light Polarization. . . . .	70
4. Study of the Polarization of Sky Light in Relation to the Related Problems of Atmospheric Optics. . . . .	97
List of Symbols. . . . .	99
References. . . . .	103

## Subcontinental Structure in the Light of Seismological Evidence

BY PERRY BYERLY, *University of California, Berkeley, California*

1. Introduction. . . . .	106
2. Techniques . . . . .	107
3. Historical—Earthquakes—Refraction (1909–1940) . . . . .	116
4. Historical—Earthquakes—Dispersion (before 1940). . . . .	124
5. Historical—Explosions (up to 1940). . . . .	125
6. Summary (to 1940). . . . .	127
7. Since 1940. . . . .	127
8. Low Velocity Layers . . . . .	141
9. Comments. . . . .	142
Acknowledgments. . . . .	147

List of Symbols. . . . .	147
References. . . . .	148

### Heat Flow through the Deep Sea Floor

BY E. C. BULLARD, A. E. MAXWELL, AND R. REVELLE, *University of Cambridge, England, and Scripps Institution of Oceanography, University of California, La Jolla, California*

1. Introduction. . . . .	153
2. Methods of Measurement . . . . .	155
3. Local Disturbances. . . . .	164
4. Summary of Measured Values of Heat Flow . . . . .	166
5. Interpretations. . . . .	169
List of Symbols. . . . .	178
References. . . . .	179

### The Interior of the Earth

BY J. A. JACOBS, *Geophysics Laboratory, Department of Physics, University of Toronto, Toronto, Canada*

1. Introduction. . . . .	183
2. Composition and Constitution of the Earth . . . . .	185
3. The Thermal History of the Earth . . . . .	202
4. The Earth's Magnetic Field . . . . .	219
5. Concluding Remarks . . . . .	229
List of Symbols. . . . .	233
References. . . . .	234

### Subsurface Geophysical Methods in Ground-Water Hydrology

BY P. H. JONES AND H. E. SKIBITZKE, *Geological Survey, U. S. Department of the Interior, Washington, D. C.*

1. Introduction. . . . .	241
2. Methods of Exploration. . . . .	243
3. Summary . . . . .	296
List of Symbols . . . . .	296
References. . . . .	297

### Geophysical Research with Artificial Earth Satellites

BY S. F. SINGER, *Physics Department, University of Maryland, College Park, Maryland*

1. Introduction. . . . .	302
2. Discussion of Individual Geophysical Experiments . . . . .	304
3. Applications of Satellite Results to Large Problems. . . . .	344
4. Limitations of Satellite Applications Imposed by Design Characteristics. . . . .	354
5. Concluding Remarks . . . . .	360
List of Symbols. . . . .	362
References. . . . .	363

# Arctic Ice Island Research

A. P. CRARY

*Geophysics Research Directorate, Air Force Cambridge Research Center, Cambridge,  
Massachusetts*

	<i>Page</i>
1. Introduction.....	1
1.1. Historical Background of Arctic Ocean Area Exploration.....	1
1.2. Outline of Scientific Studies from T-3.....	4
1.3. Personnel.....	5
2. Scientific Studies of the Arctic Ocean Area.....	6
2.1. Weather Observations.....	6
2.2. Submarine Bathymetry.....	8
2.3. Gravitational Observations.....	10
2.4. Water Masses.....	12
2.5. Ice Drift.....	13
3. Description of the Ice Islands.....	16
3.1. General Appearance and Correlation with the Ice Shelf.....	16
3.2. Summer Conditions.....	18
3.3. Surficial Deposits.....	21
3.4. Subsurface Character.....	23
3.5. Historical Evidence from Carbon-14 Dating.....	26
3.6. Possible Formation of Ice Shelf.....	27
3.7. Formation of Ridge and Trough Systems.....	30
3.8. Time of Island Break from Shelf.....	33
4. Studies Involving T-3 Uniqueness.....	34
4.1. Seismic Studies.....	34
4.2. Island Rotation.....	36
5. Future of Ice Islands.....	38
Acknowledgments.....	39
List of Symbols.....	39
References.....	39
General Bibliography.....	41

# Recent Developments in the Study of the Polarization of Sky Light\*

ZDENEK SEKERA

*University of California at Los Angeles, California*

	<i>Page</i>
1. Introduction.....	43
2. Theory of the Polarization of Sky Light.....	46
2.1. Stokes Polarization Parameters.....	46
2.2. Scattering of Light; Rayleigh and Mie Theory of Scattering.....	49
2.3. Equation of Radiative Transfer and Its Solution.....	53
2.4. Polarization of Sky Light in a Molecular Atmosphere.....	59
2.5. Polarization of Sky Light in a Turbid Atmosphere.....	72
3. Measurements of the Sky-Light Polarization.....	76
3.1. New Developments in the Technique of Polarization Measurements.....	76
3.2. Results of the Recent Photoelectric Measurements of the Sky-Light Polarization.....	82
3.2.1. Measurements of the Positions of the Neutral Points.....	82
3.2.2. Position of the Maximum Polarization.....	88
3.2.3. Maximum Degree of Polarization in the Sun's Vertical.....	90
3.3. Dispersion of the Sky-Light Polarization in Relation to the Turbidity of the Atmosphere.....	94
4. Study of the Polarization of Sky Light in Relation to the Related Problems of Atmospheric Optics.....	97
List of Symbols.....	99
References.....	103

# Subcontinental Structure in the Light of Seismological Evidence

PERRY BYERLY

*University of California, Berkeley, California*

	<i>Page</i>
1. Introduction .....	106
2. Techniques .....	107
2.1. "Refraction" Method .....	107
2.1.1. Methods of Computation .....	107
2.2. The Reflection Method .....	114
2.2.1. Methods of Computation .....	114
2.3. Dispersion of Surface Waves .....	115
3. Historical—Earthquakes—Refraction (1909–1940) .....	116
3.1. A. Mohorovičić .....	117
3.1.1. Comments by Author .....	119
3.2. V. Conrad .....	119
3.3. H. Jeffreys .....	119
3.4. B. Gutenberg—Europe .....	120
3.5. Schmerwitz, Gees, and Gräfe .....	121
3.6. Byerly .....	122
3.7. Gutenberg—California (1930–1940) .....	123
3.8. Japan .....	124
4. Historical—Earthquakes—Dispersion (before 1940) .....	124
4.1. Theory .....	124
4.2. Jeffreys and Stoneley .....	124
4.3. Gutenberg .....	125
4.4. Sezawa .....	125
5. Historical—Explosions (up to 1940) .....	125
5.1. Oppau Explosion .....	125
5.2. Quarry Blasts in Germany .....	125
5.3. La Courtine—France .....	126
5.4. North America .....	126
6. Summary (to 1940) .....	127
7. Since 1940 .....	127
7.1. Earthquake and Explosions—Body Waves (since 1940) .....	128
7.1.1. United States .....	128
7.1.2. Europe .....	133
7.1.3. Africa—Earthquakes .....	136
7.1.4. Asia—Blasts .....	138
7.2. Earthquakes—Surface Waves (since 1940) .....	138
8. Low Velocity Layers .....	141
9. Comments .....	142
9.1. Speeds of $\bar{P}$ .....	142
9.2. The Existence of $P^*$ and an Intermediate Layer .....	142

	<i>Page</i>
9.3. The Depth of the $M$ .....	146
9.4. The Speed below the $M$ .....	147
Acknowledgments.....	147
List of Symbols.....	147
References.....	148

# Heat Flow through the Deep Sea Floor\*

E. C. BULLARD, A. E. MAXWELL, AND R. REVELLE

*University of Cambridge, Cambridge, England, and Scripps Institution of Oceanography,  
University of California, La Jolla, California*

	<i>Page</i>
1. Introduction.....	153
2. Methods of Measurement.....	155
2.1. Temperature Gradient.....	155
2.2. Thermal Conductivity.....	160
3. Local Disturbances.....	164
4. Summary of Measured Values of Heat Flow.....	166
4.1. Pacific Ocean.....	166
4.2. Atlantic Ocean and Mediterranean.....	168
5. Interpretations.....	169
5.1. Possible Sources of Heat.....	169
5.2. Convection.....	173
List of Symbols.....	178
References.....	179

# The Interior of the Earth

J. A. JACOBS

*Geophysics Laboratory, Department of Physics, University of Toronto, Toronto, Canada*

	<i>Page</i>
1. Introduction.....	183
2. Composition and Constitution of the Earth.....	185
2.1. Seismic Data.....	185
2.2. Composition of the Mantle.....	188
2.3. Composition of the Core.....	192
2.4. The Inner Core.....	194
2.5. Further Considerations on the Composition of the Earth.....	196
2.6. Recent Experimental Data.....	200
3. The Thermal History of the Earth.....	202
3.1. Introduction.....	202
3.2. The Earth's Inner Core.....	204
3.3. The Melting Point and Adiabatic Gradients.....	206
3.4. Temperature at the Core-Mantle Boundary.....	210
3.5. The Thermal History of the Earth.....	212
4. The Earth's Magnetic Field.....	219
4.1. Introduction.....	219
4.2. Motions in the Earth's Core.....	220
4.3. The Basic Equations of Magneto-hydrodynamics.....	222
4.4. Inductive Mechanisms in the Earth's Core.....	224
4.5. The Geomagnetic Secular Variation and the Electrical Conductivity of the Earth.....	227
5. Concluding Remarks.....	229
5.1. Reversals of the Earth's Main Geomagnetic Field.....	230
5.2. Polar Wandering.....	231
List of Symbols.....	233
References.....	234

# Subsurface Geophysical Methods in Ground-Water Hydrology\*

P. H. JONES AND H. E. SKIBITZKE

*Geological Survey, U. S. Department of the Interior, Washington, D. C.*

	<i>Page</i>
1. Introduction.....	241
2. Methods of Exploration.....	243
2.1. Electric Logging.....	243
2.1.1. Resistance and Resistivity.....	243
2.1.2. Spontaneous Potential.....	248
2.1.3. Application of Electric Logging in Ground-Water Investigations..	256
2.2. Radiation Logging.....	263
2.2.1. Theory, Instrumentation, and Technique (by H. E. Skibitzke)....	263
2.2.1.1. Ionization Chamber.....	265
2.2.1.2. The Geiger-Mueller Counter.....	265
2.2.1.3. The Scintillation Crystal.....	266
2.2.1.4. Neutron Detectors.....	266
2.2.2. Interpretation and Application of Radioactivity and Neutron Well Logs.....	270
2.3. Temperature Logging.....	278
2.3.1. Instrumentation and Technique.....	279
2.3.2. Interpretation of Geothermal Data.....	281
2.3.2.1. Conditions of Thermal Equilibrium.....	281
2.3.2.2. Conditions of Thermal Nonequilibrium.....	283
2.4. Borehole-Diameter Logging.....	284
2.4.1. Measurement of Hole Diameter.....	286
2.4.2. Interpretation and Application of Borehole-Diameter Data.....	286
2.5. Flow-Meter Logging.....	289
2.5.1. Instrumentation and Technique.....	289
2.5.2. Interpretation and Application of Flow-Meter Logs.....	290
2.6. Fluid-Conductivity Logging.....	292
2.6.1. Instrumentation and Technique.....	293
2.6.2. Interpretation and Application of Fluid-Conductivity Data.....	294
3. Summary.....	296
List of Symbols.....	296
References.....	297

# Geophysical Research with Artificial Earth Satellites\*

S. F. SINGER

*Physics Department, University of Maryland, College Park, Maryland*

	<i>Page</i>
1. Introduction.....	302
1.1. Advantages Peculiar to Satellites.....	302
1.2. Scope and Plan of Present Review.....	303
2. Discussion of Individual Geophysical Experiments.....	304
2.1. Interior of the Earth.....	304
2.1.1. The Earth's Magnetic Field and Its Secular Variations.....	304
2.1.2. The Figure of the Earth and Gravitational Anomalies.....	308
2.2. The Earth's Surface and Lower Atmosphere.....	313
2.2.1. Albedo and Its Relation to Weather.....	313
2.2.2. Infrared Emission and Temperature of Atmosphere, Ground, and Oceans.....	319
2.2.3. Distribution of Thunderstorms.....	320
2.3. The Chemosphere.....	320
2.3.1. Ozone Content and Distribution.....	321
2.3.2. Light Emission from Airglow and Aurora.....	322
2.4. The Ionosphere.....	323
2.4.1. Electron Density.....	323
2.4.2. Ionospheric Current Systems and Relation to Magnetic Storms..	324
2.5. The Exosphere.....	327
2.5.1. Atmospheric Densities Deduced from Satellite Orbit.....	327
2.5.2. Refined Methods Suggested for Density Measurements.....	331
2.5.3. Direct Determination of Composition and Electron Density.....	332
2.5.4. Winds, Temperature, and Turbulence from Artificial Trails.....	332
2.6. Solar Electromagnetic and Corpuscular Radiation.....	333
2.6.1. Direct Measurements of Solar Ultraviolet and X-Rays.....	333
2.6.2. Scattered Lyman- $\alpha$ Radiation from Interplanetary Hydrogen...	334
2.6.3. Auroral Particles: Their Properties and Distribution.....	334
2.7. Cosmic Radiation.....	337
2.7.1. Geomagnetic Effects; Energy Spectrum and Composition.....	337
2.7.2. Increases Associated with Solar Flares.....	339
2.7.3. Decreases Associated with Solar Corpuscular Emission.....	340
2.8. Meteoric Particles.....	341
2.8.1. Size and Frequency Distribution by Impact Measurements.....	342
2.8.2. Erosion Due to Dust Impacts.....	343
3. Applications of Satellite Results to Larger Problems.....	344
3.1. Energy Balance of the Earth and Large Scale Atmospheric Circulation..	345
3.2. Solar-Terrestrial Relationships.....	351

\*Physics Department Technical Report No. 53.

	<i>Page</i>
4. Limitations of Satellite Applications Imposed by Design Characteristics . . . .	354
4.1. Considerations Involved in Choice of Orbit . . . . .	354
4.2. Inert Satellite . . . . .	356
4.3. Satellite with Telemetry . . . . .	357
4.4. Satellite with Attitude Control . . . . .	359
5. Concluding Remarks . . . . .	360
List of Symbols . . . . .	362
References . . . . .	363
