FOREWORD	vii

Atmospheric Chemistry

CHRISTIAN E. JUNGE

1. Introduction	1
2. Aerosols	3
3. Trace Gases	44
4. Precipitation Chemistry	71
5. Air Pollution and Its Role in the Chemistry of Unpolluted Air	94
List of Symbols	101
References	101

Theories of the Aurora

JOSEPH W. CHAMBERLAIN

1. Introduction	110
2. The Motions of Charged Particles in Magnetic Fields	116
3. Störmer's Theory of Aurorae	127
4. Electric Currents between the Sun and Earth.	146
5. The Chapman-Ferraro Stream and Ring Current	158
6. Other Electric-Field Theories of Aurorae.	173
7. Additional Mechanisms for the Production of Aurorae.	183
8. Theories of Auroral Excitation	191
Acknowledgments	206
List of Symbols	207
References	210

The Effects of Meteorites upon the Earth (Including Its Inhabitants, Atmosphere, and Satellites)

LINCOLN LAPAZ

1. The Effects of Typical Meteorite Falls	218
2. Number, Classification, and Weights of Recovered Meteorites.	235
3. Meteoritic Abundances and Terrestrial Meteoritic Accretion	240
4. The Hyperbolic Meteorite Velocity Problem. I	273
5. The Hyperbolic Meteorite Velocity Problem. II.	292
6. Crater-Producing Meteorite Falls	307
Appendix I. Meteoritical Pictographs and the Veneration and Exploitation of Meteorites.	329

Appendix II. Basic Meteoritic Data and Classificational Criteria Employed
in Section 5 336
List of Symbols 339
References 341

**Smoothing and Filtering of Time Series and
Space Fields**

J. LEITH HOLLOWAY, JR.

1. Introduction 351
2. Time Smoothing and Filtering 352
3. Equalization, Pre-emphasis, and Inverse Smoothing 353
4. Smoothing and Filtering Functions 354
5. Frequency Response of Smoothing Functions and Other Filters 355
6. Design of Smoothing Functions and Filters with Specified Frequency
Response. 363
7. High-Pass and Band-Pass Filtering Functions. 365
8. Elementary Smoothing and Filtering Functions. 369
9. Design of Inverse Smoothing Functions 372
10. Design of Pre-emphasis Filters 376
11. Filtering by Means of Derivatives of Time Series 378
12. Space Smoothing and Filtering 380
Acknowledgments. 386
List of Symbols. 387
References. 388

Earth Tides

PAUL J. MELCHIOR

1. Introduction 392
2. Static Theory of the Tides 394
3. Definition of Love's Numbers. 400
4. Study of the Amplitude of Oceanic Tides. 401
5. Periodical Deflections of the Vertical with Respect to the Crust. 403
6. Measurement of Elastic Tensions and Cubic Dilatations Due to Defor-
mations Produced by the Earth Tides 418
7. Deflections of the Vertical with Respect to the Axis of the Earth 423
8. Variations in the Intensity of Gravity 426
9. The Role of the Geologic Structure of the Crust in the Indirect Effects 432
10. Theory of Elastic Deformations of the Earth 435
11. Effect of Earth Tides on the Speed of Rotation of the Earth 439
12. Program of the International Geophysical Year. 440
List of Symbols. 441
References. 441
Author Index. 445
Subject Index 452

ATMOSPHERIC CHEMISTRY

Christian E. Junge

Geophysics Research Directorate, Air Force Cambridge Research Center,
L. G. Hanscom Field, Bedford, Massachusetts

	<i>Page</i>
1. Introduction.....	1
2. Aerosols.....	3
2.1. General Comments.....	3
2.2. Size Distribution of Natural Aerosols.....	5
2.3. Physical Constitution of Natural Aerosol Particles.....	14
2.4. Nature and Origin of Aitken Particles.....	17
2.5. Sea-Salt Aerosols.....	20
2.6. Continental Aerosols.....	29
3. Trace Gases.....	44
3.1. General Comments.....	44
3.2. Carbon Dioxide.....	45
3.3. Ozone.....	49
3.4. Nitrous Oxide.....	57
3.5. Nitric Oxide, Nitrogen Dioxide, and Ammonia.....	59
3.6. Sulphur Dioxide, Hydrogen Sulfide.....	64
3.7. Halogens.....	66
3.8. Methane, Carbon Monoxide, and Formaldehyde.....	67
3.9. Ratio of Gaseous to Particulate Matter for Some Chemical Components	68
4. Precipitation Chemistry.....	71
4.1. The Removal of Trace Substances from the Atmosphere.....	71
4.2. Physical and Chemical Processes of Wash-Out by Precipitation.....	73
4.3. The Content of Rain Water with Respect to the Predominantly Continental Components NH_4^+ , NO_3^- , NO_2^- , SO_4^{--} and Ca^{++}	81
4.4. The Content of Rain Water with Respect to the Predominantly Maritime Components Cl^- , Na^+ , K^+ , Mg^{++} and the Role of Precipitation in the Natural Cleansing Process of the Atmosphere.....	88
5. Air Pollution and Its Role in the Chemistry of Unpolluted Air.....	94
5.1. The Main Components in Polluted Air.....	94
5.2. The Area of Influence around Pollution Centers.....	98
List of Symbols.....	101
References.....	101

THEORIES OF THE AURORA

Joseph W. Chamberlain

Yerkes Observatory, University of Chicago, Williams Bay, Wisconsin

	<i>Page</i>
1. Introduction.....	110
1.1. Historical Summary.....	110
1.2. The Observed Phenomena.....	114
2. The Motions of Charged Particles in Magnetic Fields.....	116
2.1. Elementary Considerations for Single Particles.....	116
2.1.1. Uniform Magnetic Field.....	117
2.1.2. Uniform Electric and Magnetic Fields.....	118
2.1.3. Inhomogeneous Magnetic Field.....	119
2.1.4. Constancy of the Magnetic Moment.....	120
2.2. Motion of a Particle in the Field of a Monopole.....	122
2.3. Currents and Magnetic Fields.....	125
3. Störmer's Theory of Aurorae.....	127
3.1. Motion of a Particle in the Field of a Dipole.....	128
3.1.1. The Dipole Field.....	128
3.1.2. Integrals of the Equation of Motion.....	129
3.1.3. The Equations of Motion for the Meridian Plane.....	130
3.1.4. Orbits Lying in the Equatorial Plane.....	131
3.1.5. Forbidden Regions in the Three-Dimensional Problem.....	134
3.1.6. Motion of a Particle in Three Dimensions.....	136
3.1.7. Orbits through the Origin; Families of Orbits.....	138
3.2. Application to the Aurora.....	141
3.2.1. The Auroral Zone.....	141
3.2.2. Auroral Forms.....	143
4. Electric Currents between the Sun and Earth.....	146
4.1. Early Criticisms and Modifications of Störmer's Theory.....	147
4.2. Bennett and Hulburt's Self-Focused Stream.....	148
4.2.1. Qualitative Description.....	148
4.2.2. The Hydromagnetic Pinch Effect.....	151
4.2.3. Total Current Required for Constriction.....	151
4.2.4. The Radial Electric Field.....	153
4.3. Ferraro's Criticism.....	155
5. The Chapman-Ferraro Stream and Ring Current.....	158
5.1. Theory of a Neutral, Ionized Stream.....	158
5.1.1. Motion of a Plane Slab in a Uniform Magnetic Field.....	160
5.1.2. Cylindrical Stream in a Uniform Field.....	161
5.1.3. Advance of a Stream into a Magnetic Field.....	162
5.1.4. The Cylindrical-Sheet Problem.....	166
5.2. Theory of a Ring Current.....	168
5.3. Martyn's Theory of Aurorae.....	170

	<i>Page</i>
6. Other Electric-Field Theories of Aurorae.....	173
6.1. Alfvén's Theory.....	174
6.2. Hoyle's Theory.....	177
6.3. Lebedinski's Theory.....	178
6.4. Discussion of Solar Streams.....	180
6.4.1. Speculations on Electric Fields in Auroral Theory.....	180
6.4.2. The Nature of Solar Ion Streams.....	181
7. Additional Mechanisms for the Production of Aurorae.....	183
7.1. Dynamo Theories of Wulf and Vestine.....	183
7.2. Singer's Shock-Wave Theory.....	186
7.3. Parker's Theory of Hydromagnetic Displacement of the Lines of Force..	189
7.4. Maris and Hulburt's Ultraviolet-Light Theory.....	190
7.5. Meteor Theories.....	190
8. Theories of Auroral Excitation.....	191
8.1. Electrons in Aurorae.....	191
8.1.1. Electron Densities.....	191
8.1.2. Primary Electrons.....	192
8.2. Incident-Proton Theory of Arcs.....	193
8.2.1. Auroral Ionization by Protons.....	194
8.2.2. Excitation of Hydrogen in Aurorae.....	196
8.2.3. Discussion of the Angular Dispersion of the Incident Protons....	200
8.2.4. The Velocity Dispersion of the Incident Protons.....	202
8.3. Electric-Discharge Theory of Rays.....	204
Acknowledgments.....	206
List of Symbols.....	207
References.....	210

THE EFFECTS OF METEORITES UPON THE EARTH (INCLUDING ITS INHABITANTS, ATMOSPHERE, AND SATELLITES)

Lincoln LaPaz

Director, Institute of Meteoritics, University of New Mexico,
Albuquerque, New Mexico

	<i>Page</i>
1. The Effects of Typical Meteorite Falls.	218
1.1. Effects Produced by an Infalling Meteorite.	219
1.2. Damage and Injury from Falling Meteorites.	225
1.2.1. The Probability of Meteorite Hits on the HTA.	228
1.2.2. The Probability of Meteorite Hits on BTA's.	230
1.2.3. The Probability of Meteorite Hits on VTA's.	234
2. Number, Classification, and Weights of Recovered Meteorites.	235
3. Meteoritic Abundances and Terrestrial Meteoritic Accretion.	240
3.1. Elemental Abundances in Meteorites.	240
3.2. Observed Meteoritic Contributions to the Earth.	242
3.3. Criteria for Estimating the Population of Meteoritic Showers.	247
3.4. The Detection and Recovery of Meteoritic Material.	252
3.4.1. The Search for Superficially Buried Meteorites.	253
3.4.2. The Vertical Distribution of Meteoritic Iron in the Earth.	255
3.4.3. Meteorite Detectors.	258
3.5. The Rate of Accretion of Meteoritic Dust.	264
3.6. Phenomena Related to the Infall of Meteoritic Dust.	269
3.6.1. Anomalous Light Streaks and Noctilucent Clouds.	269
3.6.2. The Relation between Rainfall Peaks and Meteor Showers.	272
3.6.3. The Meteoric Ionospheric Layer of Kaiser.	273
4. The Hyperbolic Meteorite Velocity Problem. I.	273
4.1. The Ballistic Potential of Meteorites.	273
4.2. A Photographed Meteor of Strongly Hyperbolic Velocity.	274
4.3. Radar-Meteor Velocities and Their Limitations.	278
4.3.1. Limitations Due to Selectivity Effects in Instrumentation and in Reduction Processes.	278
4.3.2. The <i>M</i> -Zone Limitation and Its Implications.	281
4.4. The Hyperbolic Comet Question and Its Relation to the Problem of Meteoritic Velocities.	283
4.5. Nonvisual Methods of Meteoritic Velocity Determination.	286
4.5.1. The Inverse Acceleration Method.	286
4.5.2. The Coma Method.	289
4.5.3. A Method Which May Be Applicable to High-Speed Carbon- Bearing Meteorites.	290
5. The Hyperbolic Meteorite Velocity Problem. II.	292
5.1. The Frequency Distribution of Meteorite Falls as a Function of the Right Ascension of the Moon at the Time of Fall.	294
5.2. B-Processes and the Hyperbolic Velocity Problem.	306

	<i>Page</i>
6. Crater-Producing Meteorite Falls.....	307
6.1. The Barringer Meteorite Crater.....	311
6.2. The Odessa Meteorite Crater.....	319
6.3. Determinations of the Mass of Crater-Producing Meteorites and of the Age of the Craters.....	323
6.4. The Diffusion of NiO in the Soil and the Age of the Brenham Meteorite Craters.....	326
Appendix I. Meteoritical Pictographs and the Veneration and Exploitation of Meteorites.....	329
Appendix II. Basic Meteoritic Data and Classificational Criteria Employed in Section 5.....	336
List of Symbols.....	339
References.....	341

SMOOTHING AND FILTERING OF TIME SERIES AND SPACE FIELDS

J. Leith Holloway, Jr.

U. S. Weather Bureau, Washington D.C.

	<i>Page</i>
1. Introduction.....	351
2. Time Smoothing and Filtering.....	352
3. Equalization, Pre-emphasis, and Inverse Smoothing.....	353
4. Smoothing and Filtering Functions.....	354
5. Frequency Response of Smoothing Functions and Other Filters.....	355
6. Design of Smoothing Functions and Filters with Specified Frequency Response.....	363
7. High-Pass and Band-Pass Filtering Functions.....	365
8. Elementary Smoothing and Filtering Functions.....	369
9. Design of Inverse Smoothing Functions.....	372
10. Design of Pre-emphasis Filters.....	376
11. Filtering by Means of Derivatives of Time Series.....	378
12. Space Smoothing and Filtering.....	380
Acknowledgments.....	386
List of Symbols.....	387
References.....	388

EARTH TIDES

Paul J. Melchior*

Observatoire Royal de Belgique, Uccle, Brussels, Belgium

	<i>Page</i>
1. Introduction.....	392
2. Static Theory of the Tides.....	394
2.1. Calculation of the Attraction.....	394
2.2. Deformations of the Level Surfaces Caused by Luni-Solar Effects.....	396
2.3. The Three Kinds of Tides According to Laplace.....	397
2.4. Numerical Values.....	399
3. Definition of Love's Numbers.....	400
4. Study of the Amplitude of Oceanic Tides.....	401
4.1. Effect Due to the Deformations of the Crust.....	401
4.2. Application to Oceanic Tides of Long Period.....	402
4.3. Application to Short Period Tides in Lakes.....	402
5. Periodical Deflections of the Vertical with Respect to the Crust.....	403
5.1. Effect Caused by Deformations of the Crust.....	403
5.2. The Horizontal Pendulum.....	404
5.3. Observations Obtained from Large Water Levels.....	407
5.4. Numerical Results of the Observations.....	409
5.5. Discussion of the Observations—the Indirect Effect of the Oceanic Tides.....	411
5.6. Method of Numerical Evaluation of the Indirect Effects.....	411
5.7. Empirical Method of Separation of the Two Effects.....	414
5.8. Effect of the Tides on High Precision Leveling Operations.....	417
6. Measurement of Elastic Tensions and Cubic Dilatations Due to Deformations Produced by the Earth Tides.....	418
6.1. Components of the Tension.....	418
6.2. The Sassa Extensometer.....	418
6.3. Effect of Cubic Dilatations on Wells.....	421
7. Deflections of the Vertical with Respect to the Axis of the Earth.....	423
7.1. Effect of Deformation of the Crust.....	423
7.2. Indirect Effects.....	424
7.3. The Zenith Telescope.....	424
7.4. The Photographic Zenith Tube.....	425
7.5. Value Concluded for Λ	426
8. Variations in the Intensity of Gravity.....	426
8.1. Effect of Crustal Deformation.....	426
8.2. Bifilar Gravimeters.....	427
8.3. Prospecting Gravimeters.....	427
8.4. Results of the Observations.....	429
8.5. Observations Made with Clock Pendulums.....	431

* Reporter General for earth tides of the International Associations of Geodesy and Seismology.

	<i>Page</i>
9. The Role of the Geologic Structure of the Crust in the Indirect Effects . . .	432
9.1. Oceanic Effects	432
9.2. Atmospheric Effects	434
10. Theory of Elastic Deformations of the Earth	435
10.1. Conclusions Drawn from the Observations of Various Effects of Earth Tides	435
10.2. Law of Elasticity	435
10.3. Herglotz Theory	435
10.4. Note on the Relation between the Numbers h and k	437
10.5. Dynamic Effects of the Core	438
11. Effect of Earth Tides on the Speed of Rotation of the Earth	439
12. Program of the International Geophysical Year	440
