Foreword vii

Indices of Solar Activity

by R. Grant Athay and Constance S. Warwick

1. Introduction 1
2. Features of the Undisturbed Sun 5
3. Phenomena of the Disturbed Sun 23
4. Indirect Indices of Solar Activity 48
5. Interrelations 65
Selected References for Solar Indices 74
References 76

Satellite Studies of the Ionization in Space by Radio

by Owen K. Garriott and R. N. Bracewell

1. Introduction 85
2. Satellites as a Tool in Ionospheric Research 95
3. Some Results of the Satellite Experiments 118
4. Conclusion 129
List of Symbols 132
References 133

Use of Constant Level Balloons in Meteorology

by J. K. Angell

1. Introduction 138
2. History of the Constant Level Balloon Concept 139
3. Constant Level Balloon Instrumentation 142
4. The Evaluation of Air-Flow Parameters from Constant Level Balloons 148
5. Horizontal and Vertical Sounding Systems—A Critique 154
6. The Constant Level Balloon as a Verifier of Trajectory Hindcasts and Forecasts 157

7. Climatological Analysis of Operational Transosonde Flights 160
8. Singularities and Periodicities Along Transosonde Trajectories .. 191
9. Derivation of Kinematic Properties Other Than the Wind from Constant Level Balloon Data 200
10. Meteorological Applications of Constant Level Balloon Oscillations in the Vertical 208
11. Conclusion 211
List of Symbols 212
References 213

Paleomagnetism

BY RICHARD R. DOELL AND ALLAN COX

1. Introduction 221
2. Results from Direct Observation of the Geomagnetic Field 222
3. Magnetization of Rocks 228
4. Paleomagnetic Studies of Field Intensity 245
5. Paleomagnetic Studies of Field Direction 253
6. Summary 302
List of Symbols 303
References 304

Numerical Prediction of Storm Surges

BY PIERRE WELANDER

1. Introduction 316
2. Mechanism of the Storm Surge 319
3. Some Analytical Studies of Storm Surges 325
4. Empirical Methods for Prediction of Storm Surges 327
5. Theoretical Basis for a Numerical Prediction 336
6. Numerical Methods 348
7. The Meteorological Problem 355
8. Experiments in Numerical Prediction 358
List of Symbols 377
References 378

AUTHOR INDEX 381
SUBJECT INDEX 389

INDICES OF SOLAR ACTIVITY

R. Grant Athay

High Altitude Observatory of the University of Colorado, Boulder, Colorado

and

Constance S. Warwick

National Bureau of Standards, Boulder, Colorado

Page

1. Introduction 1
   1.1. Scope of this Review 1
   1.2. General Features of the Sun and Solar Radiation 2
2. Features of the Undisturbed Sun 5
   2.1. General Concepts 5
   2.2. The Photosphere and Granulation 7
   2.3. The Chromosphere and Spicules 11
   2.4. The Corona 18
3. Phenomena of the Disturbed Sun 23
   3.1. General Features 23
   3.2. Sunspots 25
   3.3. Faculae 29
   3.4. Plages 30
   3.5. Prominences and Filaments 31
   3.6. Flares 33
   3.7. Active Coronal Regions 39
   3.8. Magnetic Fields 41
   3.9. Variable Emission in the Radio Spectrum 44
4. Indirect Indices of Solar Activity 48
   4.1. Introduction 48
   4.2. Indirect Measures of Solar Ultraviolet and X-Radiation 49
   4.3. Indirect Measures of Solar Particle Emission 55
5. Interrelations 65
   5.1. Introduction 65
   5.2. Relations of Slowly Varying Features 68
   5.3. Relations of Specific Events 69
   5.4. Uses of Solar Indices 72

Selected References for Solar Indices 74

SATELLITE STUDIES OF THE IONIZATION IN SPACE BY RADIO

Owen K. Garriott and R. N. Bracewell

Department of Electrical Engineering and Radioscience Laboratory, Stanford University, Stanford, California

Page

1. Introduction 85
   1.1. Frequency Shift 86
   1.2. Angle of Arrival 89
   1.3. Faraday Effect 91
   1.4. The Integrated Electron Density 94
2. Satellites as a Tool in Ionospheric Research 95
   2.1. Doppler Studies 95
   2.2. Faraday Rotation 105
   2.3. Geostationary Satellite 109
   2.4. Refraction Studies 111
   2.5. Local Electron Density Measurements 115
3. Some Results of the Satellite Experiments 118
   3.1. Electron Content 119
   3.2. Scintillation 122
   3.3. Large-Scale Irregularities in the Ionosphere 124
   3.4. Propagation Effects 125
   3.5. Very Low Frequency Measurements in Explorer VI 128
4. Conclusions 129

USE OF CONSTANT LEVEL BALLOONS IN METEOROLOGY

J. K. Angell

U. S. Weather Bureau, Washington, D. C.

Page

1. Introduction 138
2. History of the Constant Level Balloon Concept 139
   - 2.1. Introduction 139
   - 2.2. Development Prior to World War II 139
   - 2.3. Development During World War II 140
   - 2.4. Development Subsequent to World War II 140
3. Constant Level Balloon Instrumentation 142
   - 3.1. Introduction 142
   - 3.2. The Transosonde Balloon 142
   - 3.3. Transosonde Equipment for Maintaining Constant Level Flight 142
   - 3.4. Other Airborne Transosonde Equipment 143
   - 3.5. Possible Future Instrumentation 144
   - 3.6. The Superpressure Balloon System 146
4. The Evaluation of Air-Flow Parameters from Constant Level Balloons 148
   - 4.1. Introduction 148
   - 4.2. The Constant Level Balloon as a Quasi-Lagrangian System 148
   - 4.3. Determination of the Ageostrophic Wind from Constant Level Balloons. 149
   - 4.4. The Transosonde Positioning System 150
5. Horizontal and Vertical Sounding Systems—A Critique 154
   - 5.1. Introduction 154
   - 5.2. "Representativeness" of Horizontal and Vertical Soundings 154
   - 5.3. Validity of Climatological Data Derived from Horizontal and Vertical Soundings 155
6. The Constant Level Balloon as a Verifier of Trajectory Hindcasts and Forecasts 157
   - 6.1. Introduction 157
   - 6.2. Verification of Kinematic Trajectory Methods 157
   - 6.3. Verification of Dynamic Trajectory Methods 158
   - 6.4. Verification of Electronic Computer Methods 159
7. Climatological Analysis of Operational Transosonde Flights 160
   - 7.1. Introduction 160
   - 7.2. Trajectories and Trajectory Dispersion 160
   - 7.3. Velocity and Ageostrophic Velocity Statistics 167
   - 7.4. Periodicities in the Flow and Phase Lags between Parameters 173
   - 7.5. Some Evidence for a Mean Meridional Flow 180
   - 7.6. Transosonde Density as a Function of Time since Nonsimultaneous Release 182
   - 7.7. Use of Transosonde Data in Daily Map Analysis and Forecasting 185
8. Singularities and Periodicities Along Transosonde Trajectories 191
   - 8.1. Introduction 191
   - 8.2. Trajectory Singular Points or "Cusps" 192
   - 8.3. Inertial Oscillations 194

8.4. Abnormal or Anomalous Flow 196
8.5. Anticyclonic Wind Shear and the Trajectory Forecast Problem 198
8.6. Critique 198
9. Derivation of Kinematic Properties Other Than the Wind from Constant Level Balloon Data 200
9.1. Introduction 200
9.2. The Estimation of Vertical Motion 200
9.3. The Estimation of Horizontal Divergence 202
9.4. The Estimation of Vorticity and Deformation 205
10. Meteorological Applications of Constant Level Balloon Oscillations in the Vertical 208
10.1. Introduction 208
10.2. The Estimation of Atmospheric Turbulence 208
10.3. The Delineation of Mountain Waves 209
11. Conclusion 211
List of Symbols 212

PALEOMAGNETISM*

Richard R. Doell and Allan Cox

U.S. Geological Survey, Department of the Interior, Menlo Park, California

Page

1. Introduction 221
2. Results from Direct Observation of the Geomagnetic Field 222
   2.1. Spherical Harmonic Analysis 222
   2.2. Origin of the Earth's Magnetic Field 225
   2.3. Unsolved Problems 227
3. Magnetization of Rocks 228
   3.1. Origin of Natural Remanent Magnetization 228
   3.2. Types of Natural Remanent Magnetization 229
   3.3. Methods for Establishing Paleomagnetic Reliability 236
   3.4. Instruments 244
4. Paleomagnetic Studies of Field Intensity 245
   4.1. General Methods 245
   4.2. Thellier's Experimental Method 246
   4.3. Discussion of Results 248
5. Paleomagnetic Studies of Field Direction 253
   5.1. Special Methods of Analysis 253
   5.2. Paleomagnetic Data 256
   5.3. Reversals 273
   5.4. Interpretations of Paleomagnetically Determined Field Directions 288
6. Summary 302

List of Symbols 303

NUMERICAL PREDICTION OF STORM SURGES

Pierre Welander[1]

Swedish Research Council of the Natural Sciences and International Meteorological Institute, Stockholm, Sweden

Page

1. Introduction 316
   1.1. Effects of Storm Surges 316
   1.2. The Prediction Problem 317
   1.3. Comparison with the Weather Prediction Problem 318
   1.4. Other Aspects of the Prediction Problem 318
2. Mechanism of the Storm Surge 319
   2.1. Definition of the Surge 319
   2.2. The Deep Water Surge 320
   2.3. The Shallow Water Surge 321
   2.4. The Time Effects 322
   2.5. Linearity of the Surge 325
3. Some Analytical Studies of Storm Surges 325
4. Empirical Methods for Prediction of Storm Surges 327
   4.1. Correlation Methods 327
   4.2. The Influence Method 332
5. Theoretical Basis for a Numerical Prediction 336
   5.1. Use of Numerical Prediction Methods 336
   5.2. Basic Equations 336
   5.3. Derivation of the Linear Prediction Equations 338
   5.4. The Bottom Stress 340
   5.5. Boundary and Initial Conditions 342
   5.6. Moving Coordinate System 345
   5.7. Near-Shore Effects 346
6. Numerical Methods 348
   6.1. Representation 348
   6.2. Finite Difference Methods 348
   6.3. Finite Difference Form of the Prediction Equation 350
   6.4. Smoothing Technique 350
   6.5. Boundary Conditions 352
   6.6. Numerical Stability 352
7. The Meteorological Problem 355
   7.1. The Meteorological Data 355
   7.2. Computation of Surface Winds 356
   7.3. Wind Stress Formula 356
8. Experiments in Numerical Prediction 358
   8.1. Hand Computations 358
   8.2. Machine Computations of Surges in the North Sea 361
   8.3. Machine Prediction of Surges in the Baltic Sea 363
   8.4. Machine Computation of a Surge in Lake Michigan 366
   8.5. Further Research 372
