Atlantic Air-Sea Interaction

J. BJERKNES

1. Introduction	1
2. The Pure Wind Drift of the Water near the Ocean Surface	2
3. The Geostrophic Ocean Currents	4
4. The Oceanic Heat Budget	8
5. The Local Heat Balance of the North Atlantic Ocean	9
6. Correlation of Sea Temperature and Strength of the Westerlies between the Azores and Iceland	18
7. Maps of Short Trends of Change of the North Atlantic Sea Surface Temperatures and the Related Change of the Atmospheric Circulation	21
8. The Long Trend of Cooling North of 50°N from the 1890's to the Early 1920's	31
9. The Trend of Warming after the Early 1920's, and Superimposed Short-Period Fluctuations	38
10. Summarization of the Variations of Sea Temperature in the Belt of Westerlies	49
11. The Chronology of Atlantic Temperature Variations between 30°N and 30°S	51
12. The Trans-Equatorial Heat Exchange	62
13. Atmospheric and Oceanic Temperature Anomalies Around 1800 A.D.	67
14. The Role of the Atlantic for the Meridional Heat Flux in the Northern Hemisphere	75
15. Conclusion	78
Acknowledgments	80
List of Symbols	80
References	81

The Optical Spectrum of Lightning

LEON E. SALANAVE

1. Introduction	83
2. Generation and Forms of Lightning	83
3. Lightning Spectroscopy	84

4. The Temperature of Lightning	95
Acknowledgments	97
References	97

Scattered Radiation in the Atmosphere and the Natural Aerosol

KURT BULLRICH

1. Introduction.....	101
2. The Aerosol	105
3. Main Light Scattering Parameters and Basic Computations According to the Mie Theory	117
4. Computations of Light Scattering Properties of a Unit Volume of Air for Various Model Aerosols	137
5. Measured Light Scattering Properties of a Unit Volume of Air Compared to Computational Results	168
6. Measurements and Calculations of Intensity and Polarization of Sky Radiation	202
7. Conclusions	241
8. Appendix to Section 3. Main Parameters of Scattered Radiation with Regard to Aerosol Size Distribution	242
Acknowledgments	256
List of Symbols	256
References	257

Tensor Calculus in Atmospheric Mechanics

PIERRE DEFRISE

1. Introduction.....	262
2. World Tensors and Instantaneous Tensors	263
3. Internal Kinematics of a Deformable Body	274
4. Kinematics of a Motion	278
5. The Atmosphere and Its Motion	287
6. Balance Equations	293
7. Averaging Processes	301
8. Anholonomic Coordinates	304
9. Special Coordinate Systems	308
List of Symbols	312
References	314

Advances in Radar Meteorology

DAVID ATLAS

1. Introduction.....	318
2. Quantitative Measurements	321
3. Reflectivity and Attenuation of Atmospheric Particles	337
4. Radar Measurements of Precipitation	381
5. The Measurement of Storm Dimensions	387
6. Signal Fluctuations and Doppler Radar	393
7. Instrumentation for Data Processing, Display, and Transmission ..	424
8. "Angel" Echoes	432
9. Summary	457
Acknowledgments	462
List of Symbols	462
References	468

SCATTERED RADIATION IN THE ATMOSPHERE AND THE NATURAL AEROSOL

Kurt Bullrich

Meteorological-Geophysical Institute, Johannes Gutenberg University, Mainz, Germany

	<i>Page</i>
1. Introduction	101
General Remarks	102
2. The Aerosol	105
2.1. Natural Aerosol Size Distributions	105
2.2. Physical Structure of Natural Aerosols and Their Refractive Indices.....	110
3. Main Light Scattering Parameters and Basic Computations According to the Mie Theory	117
3.1. Extinction Coefficient $a(\lambda)$ (a Dimensionless number) and Scattering Coefficient $\sigma'(\lambda)$	117
3.2. The Scattering Function $f(\lambda, \varphi)$	124
3.3. The Sky Radiation Equation for Primary Scattering	126
3.4. The Polarization Function $P(\lambda, \varphi)$	127
3.5. Multiple Scattering.....	131
3.6. New Computations of Scattering Functions $i_1(\varphi)$, $i_2(\varphi)$ and of Scattering Cross Section $\kappa(m, \alpha)$ for Homogeneous Spherical Particles According to the Mie Theory	131
Principle of Mie's Solution	131
3.7. Some Computational Results by Use of the Mie Theory	133
4. Computations of the Light Scattering Properties of a Unit Volume of Air for Various Model Aerosols	137
4.1. Angular Function $\eta(\lambda, \varphi)$ and its Dependence on ν^* , λ , and Boundary Particle Radii r_1 and r_2	137
4.2. Scattered Light Intensity of a Unit Volume of Hazy Air (Scattering Function).....	146
4.3. Ratio of Molecular (Rayleigh) Scattering to Scattered Light Intensity of a Unit Volume of Air	149
4.4. Computation of Polarization Function of Light Scattered by a Unit Volume of Air	154
4.5. Polarization Function for Normal Distributions $\nu^* = 2.5, 3, 3.5$ and 4 and for Visual Ranges of 20 and 0.5 km as well as Influence of Rayleigh Scattering. .	154
4.6. Polarization Functions Whose Boundary Particle Radii Deviate from the Normal Aerosol Size Distribution	160
4.7. Maximum Degree of Polarization at Scattering Angle $\varphi = 100^\circ$ as a Function of Visual Range and Wavelength for Various Aerosol Size Distributions. . .	165
5. Measured Light Scattering Properties of a Unit Volume of Air Compared to Computational Results	168
5.1. Spectral Measurements of Light Scattering in Unit Volume of Air.....	168
5.2. Meters for Measuring Light Scattering Spectrum of a Unit Volume of Air in Natural Aerosol	169
5.3. Photometer for Measuring Spectral Extinction of Wavelengths from 0.4 through 0.85 μ	173

5.4. Photometer for Measuring Spectral Extinction of Wavelengths from 0.9 through 1.8μ	174
5.5. Scattering Coefficient Measurements in Haze with a Horizontal Beam.....	175
5.6. Measurements of Spectral Scattering Coefficient in Fog.....	176
5.7. Measurements of Spectral Scattering Function of a Unit Volume of Air in Haze with a Searchlight Beam at Mainz.....	177
5.8. Measurements of Scattering Function in Fog at Mainz.....	185
5.9. Measurements of Spectral Polarization Function of a Unit Volume of Air in Haze with Searchlight Beam at Mainz.....	187
5.10. Measurements of the Polarization Function in Fog.....	196
5.11. Measurements of Elliptical Polarization	197
6. Measurements and Calculations of Intensity and Polarization of Sky Radiation ..	202
6.1. Computation of Degree of Spectral Polarization of Sky Radiation	205
6.2. Measurements of Degree of Spectral Polarization of Sky Radiation.....	211
6.3. Measurements of Degree of Spectral Polarization of Sky Radiation at S'Agata, Italy and at Mainz	211
6.4. Measurements of the Position of Plane of Polarization.....	216
6.5. Influence of Multiple Scattering on Distribution of Sky Radiation in Rayleigh Atmosphere	219
6.6. Influence of Multiple Scattering on Spectral Distribution of Degree of Polarization of Sky Radiation in Rayleigh Atmosphere	223
6.7. Influence of Multiple Scattering on Spectral Distribution of Intensity of Sky Radiation in a Haze Atmosphere.....	225
6.8. Experimental Evaluation of Multiple Scattering of Sky Radiation.....	226
6.9. Influence of Multiple Scattering on Polarization in a Haze Atmosphere.....	227
6.10. Measurements of Degree of Polarization of Sky Radiation during the Total Solar Eclipse on February 15, 1961 at Viareggio, Italy.....	230
6.11. Sky Radiation Spectrum in a Very Transparent Atmosphere.....	231
6.12. Measurements of Spectral Scattering Function of Sky Radiation in Greenland Compared with Computed Distribution in Rayleigh Atmosphere.....	234
6.13. Measured Spectral Distributions of Degree of Polarization of Sky Radiation in Greenland Compared with Computed Distributions in Rayleigh Atmosphere.....	241
7. Conclusions	241
8. Appendix to Section 3. Main Parameters of Scattered Radiation with Regard to Aerosol Size Distribution	242
8.1. Aerosol Size Distribution.....	242
8.2. Scattering Coefficient σ' of a Unit Volume of Hazy Air	243
8.2.1. Scattering Coefficient σ_D for One Particle from Integration over all Angles According to Mie.....	244
8.2.2. Scattering Coefficient of a Unit Volume of Haze $\sigma_{D'}$	245
8.2.3. Rayleigh Scattering Coefficient σ_R and Visual Range V	246
8.3. Extinction Coefficient $a(\lambda)$ of Total Atmosphere.....	247
8.3.1. Extinction Coefficient $a_D(\lambda)$ of Haze (Aerosol) Atmosphere	247
8.3.2. Extinction Coefficient $a(\lambda)$ Taking Air Molecules and Turbidity Factor T into Account	249
8.4. Scattering Function of a Unit Volume of Hazy Air.....	249
8.4.1. Scattering Function of a Unit Volume of Haze Only	249
8.4.2. Scattering Function of a Unit Volume of Hazy Air Taking Rayleigh Scattering into Account	250

8.5. Scattering Function of Total Atmosphere.....	250
8.6. Sky Radiation Equation.....	251
8.7. Stokes' Parameters.....	253
8.8. Degree of Polarization of Sky Radiation	254
Acknowledgments	256
List of Symbols.....	256
References	257

TENSOR CALCULUS IN ATMOSPHERIC MECHANICS

Pierre Defrise

Royal Meteorological Institute, Uccle, Belgium

	<i>Page</i>
1. Introduction	262
2. World Tensors and Instantaneous Tensors	263
2.1. Transformations of Coordinates and Conventions.....	263
2.2. World Tensors.....	264
2.3. Instantaneous Tensors and Hybrid Tensors	266
2.4. Tensor Algebra	267
2.5. Metric Tensor and Associated Tensors	268
2.6. Relative or Weighted Tensors	269
2.7. Reduction Rules.....	271
2.8. Covariant Differentiation in the Space Sections	271
2.9. Curl and Divergence	272
3. Internal Kinematics of a Deformable Body.....	274
3.1. Convected Coordinate Systems	274
3.2. Lie Derivative	275
3.3. Kinematics of Integrals.....	277
3.4. Rate of Deformation and Divergence	277
4. Kinematics of a Motion	278
4.1. Velocity with Respect to a Reference Body	278
4.2. Kinetic Energy and Kinetic Tensor	280
4.3. Rate of Deformation, Divergence, and Vorticity of a Motion	280
4.4. Covariant Differentiation Associated with a Reference Body	282
4.5. Various Covariant Time Fluxes.....	284
4.6. Acceleration.....	285
5. The Atmosphere and Its Motion.....	287
5.1. Stress and Stress-Strain Relations.....	287
5.2. Equations of Motion and Equation of Continuity.....	288
5.3. Curl of the Acceleration and Vorticity Equations.....	290
5.4. Divergence of the Acceleration and Divergence Equation.....	291
5.5. Perturbation Equations.....	291
6. Balance Equations	293
6.1. Derivative of Integrals or Differential Forms.....	293
6.2. Balance Equation of a Scalar.....	294
6.3. General Balance Equation of a Tensor.....	296
6.4. Applications to the Atmosphere	297
7. Averaging Processes	301
8. Anholonomic Coordinates	304
9. Special Coordinate Systems	308
List of Symbols	312
References	314

ADVANCES IN RADAR METEOROLOGY

David Atlas

Air Force Cambridge Research Laboratories, Bedford, Massachusetts

	<i>Page</i>
1. Introduction	318
1.1. Historical Background	318
1.2. Recent Developments	320
2. Quantitative Measurements	321
2.1. The Radar Equation for Distributed Targets	321
2.2. Averaging and Detection of a Fluctuating Signal	323
2.2.1. Probability Distributions—Unaveraged Signals	325
2.2.2. Probability Distributions—Averaged Signals	325
2.2.3. Probability of Signals above a Threshold	330
2.2.4. Detection of Weak Echoes in Noise	334
2.2.5. The Number of Independent Samples	336
3. Reflectivity and Attenuation of Atmospheric Particles	337
3.1. Background	337
3.2. Reflectivity	337
3.2.1. Rayleigh Scatter—The Refractive Index Factor $ K ^2$	337
3.2.2. Backscatter Cross Sections, Large Particles	338
3.2.3. Effects of Particle Shape	346
3.3. Attenuation Cross Sections	353
3.4. Particle Size Distributions	356
3.4.1. Rain	356
3.4.2. Snow	358
3.4.3. Hail	360
3.4.4. Clouds	360
3.5. Reflectivity Factor Z	363
3.5.1. Correlation of Z to Meteorological Parameters—Rain	365
3.5.2. Corrections for Large Drops	369
3.5.3. Correlation of Z to Meteorological Parameters—Snow	371
3.5.4. Reflectivity Factor and Hail	372
3.5.5. Reflectivity Factor in Clouds	376
3.6. Attenuation	378
4. Radar Measurements of Precipitation	381
4.1. By Reflectivity	381
4.2. By Attenuation	385
4.3. By Variations in Reflectivity with Wavelength	386
5. The Measurement of Storm Dimensions	387
6. Signal Fluctuations and Doppler Radar	393
6.1. The Doppler Shift	394
6.2. The Case of Two Scatterers	394
6.3. Coherent and Incoherent Radars	397
6.4. The Doppler Spectrum and the Spectrum of Intensity Fluctuations.....	397
6.5. Autocorrelation Function, Time to Independence, and Independent Samples	403

6.6.	Factors Affecting Spectrum Breadth	405
6.7.	The <i>R</i> -Meter	407
6.8.	Determination of Drop Size Distribution	408
6.9.	Vertical Profiles of Fall Speed; the Bright Band and Growth	409
6.10.	Turbulence Measurement	412
6.11.	Mean Vertical Motion	413
6.12.	Horizontal Winds and Shear	415
6.13.	Tornado Detection	420
6.14.	Velocity and Range Ambiguities	422
7.	Instrumentation for Data Processing, Display, and Transmission	424
7.1.	Reflectivity Contour Mapping	424
7.2.	Constant Altitude Plan Position Indicator	428
7.3.	Digital Data Processing	430
8.	"Angel" Echoes	432
8.1.	Observations	432
8.1.1.	Angels in Horizontal Section	432
8.1.2.	Angels in Vertical Section	435
8.1.3.	Point Angels	440
8.2.	Theoretical Discussion	449
8.2.1.	The Cross Section of a Hemispherical Shell	449
8.2.2.	The Required Size of a Shell or Plane Segment	451
8.2.3.	Effect of Surface Roughness	452
8.2.4.	Partially Reflecting Surfaces	453
8.2.5.	Cross Section of a Partially Reflecting Hemispherical Shell Segment	454
8.3.	Discussion	454
9.	Summary	457
	Acknowledgments	462
	List of Symbols	462
	Refractive.....	468
