FOREWORD	vii
PREFACE	ix

1. Precision Radiometry and Its Significance in Atmospheric and Space Physics

A. J. DRUMMOND

1.1. Introduction	1
1.1.1. Evolution of (Thermal) Radiometry	3
1.2. Historical Review of Precision Radiometry	6
1.2.1. Ångström Pyrheliometric Scale	7
1.2.2. Smithsonian Pyrheliometric Scale	9
1.2.3. International Pyrheliometric Scale	12
1.2.4. National Physical Laboratory (U.K.) Radiometric Reference	16
1.2.5. National Bureau of Standards (U.S.A.) Radiometric Reference	18
1.2.6. National Research Council (Canada) Radiometric Reference	20
1.2.7. Investigations Concerning the Spectrum of the "Black- body"	21
1.3. Precision and Accuracy of Radiometric Devices	22
1.4. The Extraterrestrial Solar Fluxes	24
1.4.1. Problems in Solar-Constant Determination (Extrap- olation Methods)	28
1.4.2. Direct Measurement—Eppley and Jet Propulsion Lab- oratories Research Project	33
1.4.3. Field Calibration of Radiometers for Extraterrestrial Solar Measurements	42
1.5. Instrumental Problems in Precision Measurements of Solar and Terrestrial Radiative Fluxes above the Earth's Surface.....	44
1.5.1. Radiation Sensing	44
1.5.2. Readout Instrumentation	48
References	49

2. Radiometry from the Viewpoint of the Detector

E. J. GILLHAM

2.1. Introduction	53
2.2. Spectral Distribution	59
2.3. The Measurement of Radiation—Basic Principles	60
2.4. The Thermopile	62
2.5. Use of Radiation Thermopiles—Measurement of Total Radiation	65
2.6. Establishment of the Radiation Scale	70
2.7. Measurement of Monochromatic Radiation	72
2.8. The Absolute Measurement of Radiant Power	75
2.9. The Absolute Measurement of Radiation	76
References	81

3. Sources as Radiometric Standards

R. STAIR

3.1. Introduction	83
3.2. Standards of Total Irradiance	84
3.3. Standards of Spectral Radiance	90
3.3.1. Apparatus and Method	91
3.3.2. Use of the Standards of Spectral Radiance	95
3.4. Standards of Spectral Irradiance	97
3.4.1. Use of the Standards of Spectral Irradiance	101
3.5. Low-Intensity Standards of Spectral Irradiance	101
3.6. Concluding Remarks	103
References	108

4. High-Accuracy Spectral Radiance Calibration of Tungsten-Strip Lamps

H. J. KOSTKOWSKI, D. E. ERMINY, and A. T. HATTENBURG

4.1. Introduction	111
4.2. Accuracy Requirements	112
4.2.1. Accuracy of C_1	112
4.2.2. Accuracy of C_2	112
4.2.3. Wavelength Accuracy	112
4.2.4. Accuracy of Blackbody Temperature	113
4.2.5. Blackbody Quality	113
4.2.6. Accuracy of Comparison	114

4.3.	The Blackbody	114
4.3.1.	Description	114
4.3.2.	Temperature Uniformity	114
4.3.3.	Emissivity	114
4.3.4.	Absorption	116
4.4.	The Spectroradiometer	118
4.4.1.	Design Criteria	118
4.4.2.	Description	118
4.5.	Temperature Calibration	120
4.5.1.	Low-Range Calibration	120
4.5.2.	High-Range Calibration	123
4.5.3.	Correction to the Thermodynamic Scale	124
4.6.	Comparison of Blackbody and Tungsten-Strip Lamp	125
4.7.	Summary of Uncertainties	126
	References	127

5. New Infrared Detectors

E. H. PUTLEY

5.1.	Introduction	129
5.2.	The Performance of an Ideal Detector	131
5.3.	Intrinsic Photoconductive Detectors	138
5.4.	Extrinsic Photoconductive Detectors	147
5.5.	New Types of Thermal Detectors	154
5.5.1.	Low-Temperature Bolometers	154
5.5.2.	The Pyroelectric Detector	158
5.6.	Laser Detectors	160
	References	162

6. Blackbodies as Absolute Radiation Standards

R. E. BEDFORD

6.1.	Introduction	165
6.2.	Principles of Absolute Total Blackbody Radiometry	169
6.3.	Temperature Measurements	171
6.4.	Stefan-Boltzmann Constant	172
6.5.	Emissivities of Blackbody Cavities	177
6.6.	Configuration Factors	182
6.7.	Low-Temperature Blackbody as an Absolute Standard of Total Radiation	184
6.8.	Experimental Difficulties in the Transfer of a Total Radiation Scale to Secondary Devices	188

6.9. Accuracy of Total Irradiance Standards	196
6.10. Applications	198
References	199

7. Experimental Blackbody (Absolute) Radiometry

A. R. KAROLI

7.1. Historical	203
7.1.1. Investigation of the Stefan–Boltzmann Constant	203
7.1.2. Verification of Planck’s Law	204
7.2. Blackbody Design	206
7.2.1. Features of Early Blackbodies	206
7.2.2. Development of High-Temperature Sources	209
7.3. Sources of Error	211
7.3.1. Associated with Blackbody Design	212
7.3.2. Originating in the Source-Detector Arrangement	213
7.4. Current Status of Cavity Sources	215
7.4.1. Types Commercially Available.....	216
7.4.2. Development of Large-Area, Low-Temperature Black- bodies	218
7.4.3. Future Requirements	220
References	223

8. Laboratory Methods of Experimental Radiometry Including Data Analysis

J. R. HICKEY

8.1. Introduction	227
8.2. Total Radiation Scales in Practice	228
8.2.1. NBS Scale	228
8.2.2. IPS Scale	231
8.2.3. Cross Referencing the Scales	232
8.3. Calibration of a Radiometer	237
8.3.1. Use of the Calibrated Radiometer	239
8.4. Sensitivity Definitions for Thermopiles	240
8.5. Filter Radiometry with Thermopile-Type Detectors	242
8.6. Correlation of Broadband and Narrowband Filter Radiometer Measurements	248
8.7. Monochromator Measurements	250
8.7.1. Status of Spectral Standards	250
8.7.2. Basic Compatibility Considerations in Using Spectral Standards with Monochromators	255

8.7.3.	Measurement of Source Emission by Monochromator Methods	257
8.8.	Use of Monochromator Data in Calculating Filter Factors	258
8.9.	Correlation of Monochromator and Filter Radiometer Measurement Results	263
8.10.	Other Uses of Spectral Standards for Calibration Purposes ...	265
8.10.1.	Use of Spectral Radiance Standards as Spectral Irradiance Standards	265
8.10.2.	Use of Irradiance Standards as Radiance Standards ..	265
	References	267

9. On Determinations of the Atmospheric Turbidity and Their Relation to Pyrheliometric Measurements

A. K. ÅNGSTRÖM

9.1.	Introduction	269
9.2.	Scattering of Solar Radiation within the Atmosphere	270
9.3.	Determination of the Ångström Turbidity Coefficient	272
9.4.	Influence of Circumsolar Sky Radiation on Pyrheliometric Measurements	275
9.5.	Absorption of Solar Radiation by Atmospheric Water Vapor ..	277
9.6.	Influence of Atmospheric Turbidity on the Planetary Albedo of the Earth	280
	Appendix	282
	References	283

10. Some Meteorological Aspects of Radiation and Radiation Measurement

G. D. ROBINSON

10.1.	General Introduction: Magnitudes	285
10.2.	Computation of Radiative Transfer in the Atmosphere	287
10.2.1.	Transmission of Direct Solar Radiation in a Clean Cloudless Atmosphere	289
10.2.2.	Diffuse Solar Radiation in a Clean Cloudless Atmosphere	289
10.2.3.	Transfer of Terrestrial Radiation in a Clean Cloudless Atmosphere	289
10.2.4.	Solar Radiation in a Cloudy Atmosphere	290
10.2.5.	Terrestrial Radiation in a Cloudy Atmosphere	290
10.2.6.	Radiation Computations as an Adjunct to Dynamical Meteorology	291

10.3.	Measurements of Solar Radiation	292
10.3.1.	Available Measurements	292
10.3.2.	Atmospheric Haze and Solar Radiation	296
10.3.3.	Volcanic Dust and Solar Radiation	298
10.3.4.	Cloud and Solar Radiation	299
10.3.5.	Solar Radiation and the Earth's Energy Balance	300
10.4.	Measurements of Terrestrial Radiation	300
10.4.1.	Measurements of Terrestrial Radiation at the Earth's Surface	301
10.4.2.	Radiative Flux Divergence in the Free Atmosphere...	302
10.5.	Indirect Sensing of Atmospheric Properties by Observations of Radiation	303
	References	305

11. Measurement of Radiation Flux and Equivalent Radiation Temperature in the Atmosphere

J. STRONG

11.1.	Introduction	307
11.2.	A New MRT Meter	312
11.3.	Four-Sphere MRT Meter	318
11.4.	Observations with the Four-Sphere MRT Meter	320
11.5.	Experiments with the Four-Sphere Model	320
11.5.1.	Case Where $a/e \neq 1.0$	321
11.5.2.	Thermistor MRT Meter	321
11.6.	Equivalent Radiation Temperature in the Upper Air	322
11.7.	Future Problems	324
11.8.	Absolute Emissivity Measurement of Flat Surfaces	324
11.9.	Pyrheliometer Development	328
	References	328

12. Applications of Thermal Radiation Measurements in Atmospheric Science

P. M. KUHN

12.1.	Role of Radiative Energy Exchange in Weather Processes	331
12.1.1.	Weather Processes	333
12.2.	Instrumentation for Radiation Measurements in the Free At- mosphere	333
12.2.1.	Balloon Radiometersonde Observations of Atmos- pheric Infrared Irradiance	333

12.2.2.	Rocket IR Instrumentation	343
12.2.3.	Satellite IR Instrumentation Capability	343
12.3.	Effects on Radiative Atmospheric Heat Budget during Artificially Induced Cirrus Metamorphoses	345
12.4.	Observed and Calculated Irradiances for the Real Atmosphere.	352
12.5.	Infrared Remote Sensing of the Atmosphere	353
12.5.1.	Background	353
12.5.2.	Radiant Power Computations	354
References	356

13. Recent Advances in Satellite Radiation Measurements

R. A. HANEL

13.1.	Brief Summary of Satellite Radiometry	359
13.2.	Physical Principles of Vertical Sounding	368
13.2.1.	Temperature Profile	368
13.2.2.	Water Vapor and Ozone Distribution	371
13.2.3.	Minor Atmospheric Constituents	372
13.3.	Vertical Sounding Experiments	372
13.4.	Intercomparison of the Instruments	377
13.5.	Calibration of the Interferometer	382
13.6.	Future Experiments	385
Appendix	386
References	388

14. The Design and Construction of Evaporated Multilayer Filters for Use in Solar Radiation Technology

E. E. BARR

14.1.	Introduction	391
14.2.	Theory of the Fabry–Perot Interferometer	392
14.3.	Filter Contrast and Bandwidth	401
14.4.	Temperature Dependence of Band Position	404
14.5.	Wide Bandpass Filters	405
14.6.	Physical Properties of Narrow Bandpass Filters	410
References	412

Appendix: Radiation Terminology, Symbols, Units, and Conversion Factors	413
