

## CONTENTS

LIST OF CONTRIBUTORS .....	vii
----------------------------	-----

### Tropical Cyclones

FRANCIS E. FENDELL

1. Introduction .....	2
2. Aspects of Tropical Meteorology .....	17
3. Models of a Mature Tropical Cyclone .....	29
4. Theory of Tropical Cyclone Intensification .....	75
5. Concluding Remarks .....	86
Appendix A. Estimating the Kinetic Energy and Water Content of Hurricanes .....	87
Appendix B. The Moist Adiabat .....	88
Partial List of Symbols .....	92
References .....	93
Note Added in Proof .....	100

### A Numerical Study of Vacillation

A. QUINET

1. Introduction .....	101
2. The Laboratory Simulation of Large-Scale Atmospheric Flow .....	102
3. A Model Atmosphere for the Study of Vacillation .....	113
4. The Spectral Dynamics and Energetics of the Model .....	131
5. The Numerical Study of Vacillation .....	149
6. Vacillation in the Atmosphere .....	178
List of Symbols .....	182
References .....	184

### Filter Techniques in Gravity Interpretation

FRANS DE MEYER

1. Introduction .....	187
2. Convolution Filtering .....	189
3. Upward and Downward Continuation of the Surface Gravity Effect .....	203
4. Frequency Filtering .....	226
5. Calculation of Derivatives of Higher Order .....	248
Appendices .....	250
List of Symbols .....	254
References .....	256

**Aerial Methods in Geological-Geographical Explorations****B. V. SHILIN AND V. B. KOMAROV**

1. Introduction.....	263
2. Radar Aerial Survey.....	265
3. Infrared Aerial Survey.....	282
4. Aerogegeochemical Survey: Remote Sensing of Gases and Vapors....	304
5. Conclusions.....	321
References .....	322
<b>SUBJECT INDEX.....</b>	<b>323</b>

# TROPICAL CYCLONES

Francis E. Fendell

Engineering Sciences Laboratory  
TRW Systems Group, Redondo Beach, California

1. Introduction . . . . .	2
1.1. The Dangers and Benefits of Hurricanes . . . . .	2
1.2. Some Observational Facts on Hurricanes . . . . .	8
1.3. Tropical Cyclone Generation . . . . .	3
1.4. Properties of Mature Hurricanes . . . . .	5
1.5. Path Prediction . . . . .	12
1.6. The Importance of Tropical Cyclones in the Global Circulation . . . . .	13
2. Aspects of Tropical Meteorology . . . . .	17
2.1. Stability in the Tropical Atmosphere . . . . .	17
2.2. Tropical Cumulonimbi . . . . .	22
2.3. CISK . . . . .	26
3. Models of a Mature Tropical Cyclone . . . . .	29
3.1. Introduction . . . . .	29
3.2. The Carrier Model . . . . .	29
3.3. Critique of the Carrier Model . . . . .	33
3.4. Maximum Swirl Speed Estimate According to the Carrier Model . . . . .	35
3.5. The Swirl-Divergence Relation for the Frictional Boundary Layer . . . . .	45
3.6. The Energetics of the Frictional Boundary Layer and Throughput Supply . . . . .	50
3.7. The Riehl-Malkus Postulate of an Oceanic Heat Source . . . . .	53
3.8. The Intensity of a Tropical Cyclone and the Underlying Sea Surface Temperature . . . . .	55
3.9. Critique of the Riehl-Malkus Model . . . . .	59
3.10. Numerical Simulation of Hurricanes on Digital Computers . . . . .	66
3.11. Implications of Hurricane Models on Seeding . . . . .	70
4. Theory of Tropical Cyclone Intensification . . . . .	75
4.1. Carrier's Outline of Intensification . . . . .	76
4.2. Critique of the Carrier Model of Intensification . . . . .	78
4.3. The Distribution of Cumulonimbi during Intensification . . . . .	81
4.4. The Time-Dependent Flowfield during Intensification . . . . .	82
5. Concluding Remarks . . . . .	86
Appendix A. Estimating the Kinetic Energy and Water Content of Hurricanes	87
Appendix B. The Moist Adiabat . . . . .	88
Partial List of Symbols . . . . .	92
References . . . . .	93
Note Added in Proof . . . . .	100

# A NUMERICAL STUDY OF VACILLATION

A. Quinet

Institut Royal Météorologique de Belgique, Bruxelles, Belgium

1. Introduction .....	101
2. The Laboratory Simulation of Large-Scale Atmospheric Flow.....	102
2.1. The Various Simulated Geophysical Flows .....	102
2.2. The Essential Distinction between Hadley and Rossby Flows .....	106
2.3. The Characteristic Features of Vacillation .....	108
3. A Model Atmosphere for the Study of Vacillation .....	113
3.1. General Comments on the Theoretical Approach to the Study of Vacillation .....	113
3.2. The Tensor Formulation of Quasi-Hydrostatic Flows .....	114
3.3. The Equations of the Two-Layer Balanced Model .....	120
4. The Spectral Dynamics and Energetics of the Model.....	131
4.1. The Spectral Representation .....	131
4.2. The Spectral Equations .....	135
4.3. Some Dynamical Properties of the Fields of Motion .....	138
4.4. The Spectral Energetics of the Model .....	141
4.5. Comments on the Various Physical Processes .....	148
5. The Numerical Study of Vacillation .....	149
5.1. The Numerical Procedure .....	149
5.2. The Potential Energy Vacillation .....	150
5.3. The Kinetic Energy Vacillation .....	162
5.4. The Various Vacillation Cycles .....	175
6. Vacillation in the Atmosphere .....	178
6.1. Potential Energy Vacillation in the Atmosphere .....	178
6.2. Kinetic Energy Vacillation in the Atmosphere .....	180
6.3. Conclusion.....	184
List of Symbols .....	182
References .....	182

# FILTER TECHNIQUES IN GRAVITY INTERPRETATION

Frans De Meyer

Royal Belgian Meteorological Institute, Uccle, Belgium

1. Introduction .....	187
2. Convolution Filtering .....	189
2.1. Definition of Convolution Filtering .....	189
2.2. The Frequency Response .....	191
2.3. Linear, Discrete Filters .....	192
2.4. Construction of Linear, Discrete Filters in the $(x, y)$ -Plane .....	195
2.5. Construction of Linear, Discrete Filters in the $(u, v)$ -Plane .....	200
3. Upward and Downward Continuation of the Surface Gravity Effect .....	203
3.1. Definition of the Surface Gravity Effect .....	203
3.2. The Upward Continuation as a Filtering Operation .....	205
3.3. Construction of a Numerical Upward Continuation Filter .....	210
3.4. The Downward Continuation as a Filtering Operation.....	213
3.5. Construction of a Numerical Downward Continuation Filter .....	219
4. Frequency Filtering .....	226
4.1. Procedure for Filtering in the Frequency Plane.....	226
4.2. Optimal Wiener Filtering .....	228
4.3. Strakhov's Method for Extraction of Potential Field Signal .....	233
4.4. Digitization of a Continuous Field—Aliasing .....	237
4.5. Estimation of the Power Spectrum .....	240
4.6. Convolution Filtering versus Frequency Filtering.....	244
5. Calculation of Derivatives of Higher Order .....	248
Appendices.....	250
List of Symbols.....	254
References .....	256

# AERIAL METHODS IN GEOLOGICAL-GEOGRAPHICAL EXPLORATIONS\*

B. V. Shilin and V. B. Komarov

Laboratory of Aeromethods,  
Ministry of Geology, Leningrad, U.S.S.R.

1. Introduction .....	263
2. Radar Aerial Survey.....	265
2.1. Procedures.....	265
2.2. Interpretation of Rock Composition .....	272
2.3. Interpretation of Structural-Tectonic Texture .....	277
2.4. Interpretation of Geological Structure in Closed Regions.....	279
3. Infrared Aerial Survey.....	282
3.1. General .....	282
3.2. Infrared Aerial Survey of Active Volcanoes .....	282
3.3. Study of Regions of Strong Geothermal Activity .....	286
4. Aerogegeochemical Survey: Remote Sensing of Gases and Vapors .....	304
4.1. Method .....	304
4.2. Equipment and Procedure.....	305
4.3. Aerial Measurements over Fumarole Fields of Caldera Uson .....	308
4.4. Active Volcanoes of Kamchatka .....	313
5. Conclusions.....	321
References .....	322
