Precipitation Augmentation from Cumulus Clouds and Systems: Scientific and Technological Foundations, 1975

Joanne Simpson

1. Introduction 1
2. Assessment of the Scientific Basis for the Modification of Cumulus Clouds and Systems 3
3. Assessment of the Technological Basis for the Modification of Cumulus Clouds and Systems 31
4. Summary and Conclusions 52

Appendix. Summary of Cumulus Model Simulations 53
References 64

The Properties of Atmospheric Aerosol Particles as Functions of the Relative Humidity at Thermodynamic Equilibrium with the Surrounding Moist Air

Gottfried Hänel

1. Introduction 74
2. Theoretic Evaluation of Mass, Size, Mean Density, and Mean Refractive Index as Functions of the Relative Humidity 76
3. Sampling Method 102
4. Measuring Techniques 104
5. Results of the Measurements 113
6. Model Computations and Approximation Formulas Based upon Measured Properties 120
7. Concluding Remarks 180

List of Symbols 181
References 183

A Three-Dimensional Model for the Numerical Simulation of Estuaries

Enrique A. Caponi

1. Introduction 189
2. Governing Equations 192
3. The Numerical Model 220

4. Test Cases 264
5. Simulation of Chesapeake Bay 287
List of Symbols 305
References 306

SUBJECT INDEX 311

PRECIPITATION AUGMENTATION FROM CUMULUS CLOUDS AND SYSTEMS: SCIENTIFIC AND TECHNOLOGICAL FOUNDATIONS, 1975

JOANNE SIMPSON

Center for Advanced Studies
and
Department of Environmental Sciences
University of Virginia, Charlottesville, Virginia

1. Introduction 1
2. Assessment of the Scientific Basis for the Modification of Cumulus Clouds and Systems 3
   2.1 Aerosols, Microphysics, and Precipitation Processes 3
   2.2 Cumulus Dynamics and Models 10
   2.3 Cumulus Interactions, Groups, and Patterns 22
3. Assessment of the Technological Basis for the Modification of Cumulus Clouds and Systems 31
   3.1 Modification Agents, Delivery Systems, and Targeting 31
   3.2 Measurement Systems 37
   3.3 Computational Tools 47
   3.4 Statistical Tools and Approaches 48
4. Summary and Conclusions 52
   Appendix. Summary of Cumulus Model Simulations 53
   References 64

THE PROPERTIES OF ATMOSPHERIC AEROSOL PARTICLES AS FUNCTIONS OF THE RELATIVE HUMIDITY AT THERMODYNAMIC EQUILIBRIUM WITH THE SURROUNDING MOIST AIR

GOTTFRIED HÄNEL

Institut für Meteorologie
Johannes Gutenberg-Universität, Mainz, Germany

1. Introduction 74
   1.1 Problem 74
   1.2 Selection of Sampling and Measuring Methods 75
2. Theoretic Evaluation of Mass, Size, Mean Density, and Mean Refractive Index as Functions of the Relative Humidity 76
   2.1 The Basic Equations for Thermodynamic Equilibrium between a Spherical Particle with Liquid Cover and the Surrounding Moist Air 77
   2.2 Thermodynamic Equilibrium When No Complete Liquid Cover Exists 91
   2.3 Thermodynamic Equilibrium between a Sample of Aerosol Particles and Its Surrounding Moist Air 94
   2.4 The Mean Density as a Function of the Relative Humidity 96
   2.5 The Mean Refractive Index as a Function of the Relative Humidity 97
   2.6 Conclusions and Requirements for Measuring Accuracy 100
3. Sampling Method 102
   3.1 Description of the Jet Impactor 102
   3.2 Settling Rate and Size of the Particles under Investigation 103
4. Measuring Techniques 104
   4.1 Measuring the Mass as a Function of the Relative Humidity 104
   4.2 Determination of the Mean Density 107
   4.3 Measuring the Mean Complex Index of Refraction 112
5. Results of the Measurements 113
   5.1 Discussion of the Results 114
   5.2 Discussion of the Coefficients of Mass Increase 116
   5.3 Mean Densities and Real Parts of the Mean Complex Index of Refraction 118
   5.4 Applicability of the Results 119
6. Model Computations and Approximation Formulas Based upon Measured Properties 120
   6.1 Basic Considerations 120
   6.2 Particle Size as a Function of Relative Humidity 122
   6.3 Particle Size Frequency Distribution as a Function of Relative Humidity 137
   6.4 Mean Density, Real Part and Imaginary Part of the Mean Complex Refractive Index versus Relative Humidity 138
   6.5 Extinction, Scattering, and Absorption Coefficients of Atmospheric Aerosol Particles as Functions of Relative Humidity 139
   6.6 Applications of the Results 171

7. Concluding Remarks 180
List of Symbols 181
References 183

A THREE-DIMENSIONAL MODEL FOR THE NUMERICAL SIMULATION OF ESTUARIES

ENRIQUE A. CAPONI*

Institute for Fluid Dynamics and Applied Mathematics
University of Maryland, College Park, Maryland

1. Introduction 189
2. Governing Equations 192
   2.1 The Continuum Description of a Fluid 192
   2.2. Real Flows: Turbulence 201
3. The Numerical Model 220
   3.1. The Solution Technique 220
   3.2. The Computer Code 257
4. Test Cases 264
   4.1. Homogeneous Fluid 265
   4.2. Salt-Driven Circulations 283
5. Simulation of Chesapeake Bay 287
   5.1. Geometry and Parameters Used 287
   5.2. Experimental Results 291
   5.3. Conclusions 303
   List of Symbols 305
   References 306
