Models for Infrared Atmospheric Radiation

SURENDRA N. TIWARI

1. Introduction.....	1
2. Absorption by Spectral Lines.....	3
3. Band Absorption.....	23
4. Evaluation of Transmittance and Integrated Absorptance of Selected Infrared Bands.....	59
5. Upwelling Atmospheric Radiation.....	69
6. Concluding Remarks.....	78
List of Symbols.....	79
References	80

Scale Analysis of Large Atmospheric Motion Systems In All Latitudes

J. VAN MIEGHEM

1. Introduction, Generalities, and Statement of the Problem.....	87
2. Scale Parameters.....	91
3. Characterization of an Atmospheric Large-Scale Motion System..	97
4. Scale Analysis of the Continuity Equation.....	100
5. Scale Analysis of the Equation of Vertical Motion.....	102
6. Scale Analysis of the Equations of Horizontal Motion.....	103
7. Scale Analysis of the Equation of Adiabatic Transformations.....	106
8. Order of Magnitude of the Divergence Δ of the Horizontal Wind..	109
9. Scale Analysis of the Vorticity Equation.....	113
10. Scale Analysis of the Equation of the Horizontal Wind Divergence	116
11. Discussion of the Basic Scale Equations.....	117
12. Scale Analysis of the Equation of Balance of Kinetic Energy.....	128
References	130

Symmetric Circulations of Planetary Atmospheres

E. L. KOSCHMIEDER

1. Introduction.....	131
2. Convection on a Nonuniformly Heated Sphere.....	134

3. Azimuthal Disturbances.....	163
4. Nonlinearity.....	170
5. Summary and Conclusions.....	175
List of Symbols.....	176
References	177

**A Survey of Statistical-Dynamical Models of the
Terrestrial Climate**

BARRY SALTZMAN

1. Introduction.....	184
2. Fundamental Equations Governing the Terrestrial Climatic System	185
3. Climatic Averaging.....	193
4. Climate Models—An Overview.....	206
5. The Vertically Integrated, Thermodynamic Models.....	225
6. Momentum Models	250
7. Modeling the Evolution of Climate.....	267
Appendix. A Simple Sea Ice–Ocean Temperature Oscillator Model	281
List of Symbols	290
References	295
SUBJECT INDEX.....	305

MODELS FOR INFRARED ATMOSPHERIC RADIATION

SURENDRA N. TIWARI

*School of Engineering
Old Dominion University, Newport News, Virginia*

1. Introduction	1
2. Absorption by Spectral Lines	3
2.1 Radiative Transmittance by Spectral Lines	8
2.2 Absorption of an Isolated Spectral Line in an Infinite Spectral Interval	11
2.3 Absorption of a Spectral Line in a Finite Spectral Interval	17
2.4 Absorption of an Overlapping Line in a Finite Spectral Interval	21
3. Band Absorption	23
3.1 Limiting Forms of the Total Band Absorptance	24
3.2 Narrow Band Models	28
3.3 Wide Band Models	43
3.4 Band Absorptance Correlations	51
3.5 Comparison of Wide Band Absorptance Results	54
3.6 Band Emissivity (Total Emissivity)	57
4. Evaluation of Transmittance and Integrated Absorptance of Selected Infrared Bands	59
4.1 Transmittance Models and Computational Procedures	60
4.2 Transmittance of Selected Infrared Bands	62
4.3 Integrated Absorptance of Selected Infrared Bands	65
5. Upwelling Atmospheric Radiation	69
5.1 Procedure for Calculating the Upwelling Radiance	71
5.2 Results of Model Calculations	72
6. Concluding Remarks	78
List of Symbols	79
References	80

SCALE ANALYSIS OF LARGE ATMOSPHERIC MOTION SYSTEMS IN ALL LATITUDES

J. VAN MIEGHEM

*University of Brussels
Brussels, Belgium*

1.	Introduction, Generalities, and Statement of the Problem	87
2.	Scale Parameters	91
3.	Characterization of an Atmospheric Large-Scale Motion System	97
4.	Scale Analysis of the Continuity Equation	100
5.	Scale Analysis of the Equation of Vertical Motion	102
6.	Scale Analysis of the Equations of Horizontal Motion	103
7.	Scale Analysis of the Equation of Adiabatic Transformations	106
8.	Order of Magnitude of the Divergence Δ of the Horizontal Wind	109
9.	Scale Analysis of the Vorticity Equation	113
10.	Scale Analysis of the Equation of the Horizontal Wind Divergence	116
11.	Discussion of the Basic Scale Equations	117
11.1	The Middle Latitude Belt 20 to 70°	118
11.2	The High Latitude Belt 70 to 88°	126
11.3	The Low Latitude Belt 2 to 20°	126
12.	Scale Analysis of the Equation of Balance of Kinetic Energy	128
	References	130

SYMMETRIC CIRCULATIONS OF PLANETARY ATMOSPHERES

E. L. KOSCHMIEDER

*Atmospheric Science Group
University of Texas, Austin, Texas*

1. Introduction	131
2. Convection on a Nonuniformly Heated Sphere	134
2.1 The Academic Case	137
2.2 The Case of Nonuniform Heating	143
2.3 The Case of Uniform Heating with Rotation	149
2.4 Nonuniform Heating with Rotation	151
2.5 Symmetric Baroclinic Instability	156
2.6 The Circulation of Jupiter's Atmosphere	157
2.7 Convection in the Atmosphere on Earth	161
3. Azimuthal Disturbances	163
3.1 The Rotating Annulus Experiment	164
3.2 Finite Azimuthal Disturbances	170
4. Nonlinearity	170
4.1 Numerical Studies	172
5. Summary and Conclusions	175
List of Symbols	176
References	177
Note Added in Proof	181

A SURVEY OF STATISTICAL-DYNAMICAL MODELS OF THE TERRESTRIAL CLIMATE

BARRY SALTZMAN

*Department of Geology and Geophysics
Yale University
New Haven, Connecticut*

1. Introduction	184
2. Fundamental Equations Governing the Terrestrial Climatic System	185
2.1 Continuity Equations	186
2.2 The Equations of Motion	188
2.3 The Thermodynamical Energy Equation	191
2.4 Constitutive Equations	193
3. Climatic Averaging	193
3.1 The Ensemble Monthly Average	193
3.2 The Climatological-Mean Equations	194
3.3 Spatial Averaging	202
4. Climate Models—An Overview	206
5. The Vertically Integrated, Thermodynamic Models	225
5.1 Foundations	225
5.2 Applications	237
5.3 Critique	248
6. Momentum Models	250
6.1 Equations for the Axially Symmetric and Asymmetric Mean States	250
6.2 Symmetric (Zonal) Models	252
6.3 Asymmetric (Nonzonal) Models	264
6.4 The Complete Time Average State	265
7. Modeling the Evolution of Climate	267
7.1 General Concepts	267
7.2 Studies of Forced Climatic Change	271
7.3 Studies of Free Climatic Change	277
7.4 Climatic Prediction	279
Appendix. A Simple Sea Ice–Ocean Temperature Oscillator Model	281
A.1 Introduction	281
A.2 The Ice Limit Equation	282
A.3 The Surface Heat Balance	283
A.4 The Mean Ocean Temperature Equation	285
A.5 Equilibrium Conditions and Constants	286
A.6 Linear Analysis	288
A.7 Concluding Remarks	290
List of Symbols	290
References	295
